Vision

To produce quality engineering graduates by imparting quality education and research in the field of computer science and information technology in order to respond swiftly the challenges of 21st century.

Mission

- To provide quality professional education in science and technology in fields relating to computer science and information technology that enable students to effectively apply this education to solve real-world problems.
- To provide a platform for students that helps students to inculcate event management skills and entrepreneurial skills.
- To create an ambience that helps students realizing social responsibilities and values of professional ethics.
- To conduct research in advanced and application-oriented arena relating to computer and information science involving students with promote on continuous learning.
- To establish strong bonding with globally leading industries.

The School of Computer Engineering offers the following Programmes:

- Computer Science and Engineering
- Information Technology
- Computer Science and Communication Engineering
- Computer Science and Systems Engineering

Programme Educational Objectives (PEO)

The Program Educational Objectives (PEO) expects professional accomplishments from our graduates.

PEO1- The graduates shall provide solutions to Computer Science & Engineering problems involving design, simulation, and analysis of algorithms for theory and applications of computing.

PEO2- The graduates shall perceive the limitations and impact of engineering solutions in social, legal, ethical, environmental, economical, and multidisciplinary contexts.

PEO3- The graduates shall demonstrate professional responsibility and thrive to reinforce their knowledge being a part of formal or informal educational programs.

Programme Outcomes (PO)

1. **Engineering knowledge:** Ability to apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis:** Ability to identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/Development of solutions:** Ability to design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations on complex problems:** Ability to use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage:** Ability to create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society:** Ability to apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7. **Environment and sustainability:** Ability to understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics:** Ability to apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team:** Ability to function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication:** Ability to communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

11. **Project management and finance:** Ability to demonstrate knowledge and understanding of the engineering and management

principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

- 12. Life-long learning:** Ability to recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Programme Specific Outcome (PSO)

1. Ability to design and develop hardware and software in emerging technology environments like cloud computing, embedded products and real-time systems.
2. Ability to work in multidisciplinary teams in small and large scale projects by utilizing modern software engineering tools and emerging technologies.
3. Ability to develop complex products for the societal and engineering needs with skills to communicate effectively in group discussions and report writing.

CURRICULUM

The total minimum credits required for completing the B. Tech. programme in Computer Science and Engineering is **161**.

Guidelines for UG Engineering Curriculum – 2022

The curricula for B.Tech. courses have been designed following the general principles of curricular design and developing certain guiding strategies in order to build in the engineering graduate attributes in the courses.

Principles in Designing the Curricula

The overriding principles in designing the new curricula are that the curricula must (1) Impart specialized and interdisciplinary knowledge and creative problem-solving skills; (2) Reflect aspirations of the society to turn out technology-ready and socially conscious graduates to anticipate and avoid future problems; (3) Leverage the strengths and help making up the weaknesses of the university; (4) Inform the students about new technologies and the emerging social, environmental, and global forces, and (5) Give students the confidence to work in teams and in multi-cultural settings.

Key Graduate Attributes

Engineers are agents of social change. They interact with the common man to know and define the current and the looming future problems, develop sustainable design solutions using their science and engineering skills, and implement sustainable solutions. Thus, the graduating students must (1) Acquire knowledge and skills—both technical and soft skills such as communication, leadership, and skills of working in multi-cultural, interdisciplinary teams; (2) Develop the mental disposition to understand, conceptualize, and define complex, real-world problems; (3) Be independent, critical thinkers to inquire into the root causes of the problems; (4) Analyse the relevant data and social, economic, and political forces influencing these problems; (5) Synthesize knowledge and diverse perspectives and approaches to find technically and financially viable, sustainable, creative, ethical solutions by evaluating novel alternatives; (6) Use project planning and scheduling methods, establish institutional mechanisms, and communicate the plans and schedules and inspire the concerned individuals to implement

the solutions; (7) Imbibe professional values and ethics, and (8) Be life-long learners with empathy for others.

Strategies for Curriculum Design

Strategies to design the curricula include (1) Understanding the dominant technological and social changes in the world, (2) Incorporating recommendations of the National Education Policy 2020 with respect to design of curricula, (3) Adding the novel features and best curricular practices of leading universities and institutes in India and abroad, (4) Recognizing the UGC and AICTE guidelines and ABET recommendations; (5) Using the opportunities that KIIT offers for multi- and inter-disciplinary education, and (6) Delivering the key attributes and skills which the graduating students should be equipped with.

The Structure of the Curricula

The undergraduate engineering curricula are designed to inculcate in the students the graduate attributes indicated above. The curricula include (1) foundational subjects in the fields of humanities, social sciences, science, engineering science, and vocational courses, (2) depth subjects—both core and electives related to the respective disciplines, (3) open electives in diverse fields of humanities, arts, science, engineering, social science, management, law, public policy, media studies, etc., and (4) practice-based subjects. These subjects reflect a mix of theory, hands-on laboratory practice, short- and long-duration projects, field visits, internship, and extra- and co-curricular activities. The Institute has created many avenues for students to organize, lead, and actively participate in social, cultural, and techno-management functions to develop soft social and behavioural skills.

UG Programmes Offered by the Schools of Technology

The B. Tech. (Hons.) and B. Tech. (Res.) programmes offered by various Schools of Technology are tabulated below.

Name of the School	B. Tech. (Hons.) and B. Tech. (Res.) Programmes Offered
School of Civil Engineering	Civil Engineering
School of Computer Engineering	Computer Science and Engineering Information Technology Computer Science and Communication Engineering Computer Science and Systems Engineering
School of Electrical Engineering	Electrical Engineering
School of Electronics Engineering	Electronics and Telecommunication Engineering Electronics and Computer Science Engineering Electronics and Electronics Engineering
School of Mechanical Engineering	Mechanical Engineering Mechanical (Automobile Engineering) Mechatronics Engineering Aerospace Engineering

Highlights of the Curricula

1. The curricula allow the students to opt for either a B. Tech. (Hon.) degree or a B. Tech. (Res.) degree.
2. All the B. Tech. curricula have total of 160 – 165 credits.
3. The curricula provide for a Minor in selected areas if students fulfil additional credit requirements.
4. With the inclusion of many Humanities, Arts, and Social Science (HASS) subjects, the curricula are HASS-rich.
5. The curricula provide flexibility in many forms. The students can choose subjects from a large number science, HASS, and engineering electives. They can also choose subjects from lists of professional electives and open electives. The professional electives allow the

students to concentrate in selected areas, whereas the open electives allow the students to opt for minors.

6. To ensure an all-round development of students, the curricula have included subjects like Yoga, Universal Human Values, a Community/Environment-based Project, a Vocational Elective, Industry 4.0 Technologies, and K-Explore that consider students' co- and extra-curricular activities for evaluation.
7. The curricula have included subjects like Scientific and Technical Writing and Research Methods and Ethics to instill research and research communication skills in the students.
8. The curricula have also provided for independent projects in the last three semesters to train the students in the art and science of identifying pressing problems and finding their sustainable solutions.

Notes and Guidelines

Science Core

Science forms the foundation of engineering. Subjects related to physical, chemical, biological, environmental, and mathematical sciences are covered in the first four semesters in the form core and elective subjects. The core subjects in science are the following:

Semester I/II: Physics, Chemistry, Science of Living Systems, Environmental Science, Differential Equations and Linear Algebra, Transform Calculus and Numerical Analysis, Physics Lab, and Chemistry Lab.

Semester III: Probability & Statistics

Semester IV: Selected Topics in Mathematics (Syllabi to be different for different Schools)

Engineering Science Core

Engineering science subjects provide a bridge between science and engineering. The related subjects are included as both core and electives.

The semester-wise distribution of the core engineering science subjects is given below.

Semester I/II: Basic Electronics, Programming & Data Structures or Programming Lab, Engineering Drawing & Graphics, Workshop Practice, and Engineering Lab

Half the number of experiments in Engineering Lab will relate to Basic Electronics and the other half to the subject the student picks from the list of Engineering Elective I subjects.

Semester III: Industry 4.0 Technologies

HASS Core

The curricula include HASS subjects as both core and electives. The HASS subjects that improve the written and rhetoric skills, life skills and research skills of students are included as core subjects. Semester-wise distribution of these subjects are given below:

The semester-wise distribution of language- and human values-related subjects is given below:

Semester I/II: English (to develop language skills and skills for making critical analysis of English literature)

Semester I/II: Communication Lab (to develop skills of Listening, Speaking, and Writing)

Semester I/II: Yoga (to bring about unity of mind and body)

Semester III: Scientific and Technical Writing (to develop skills of writing varieties of scientific and technical documents)

Semester VI: Universal Human Values (to develop and respect human values) and Engineering Professional Practice (to understand roles and responsibilities of engineers and the ethical and selected legal issues)

Semester VIII: Research Methods and Ethics (for B. Tech. (Res.) students)

Professional Core

Professional core subjects form the backbone of an engineering discipline. Every School of Technology decides the list of core subjects that its students must credit. These can be theory and laboratory subjects. These subjects are diffused in Semester III through Semester VI.

Engineering Professional Practice, a professional core subject, is included as a HASS Elective but will be taught by engineering faculty.

Research Core

Students pursuing B. Tech. (Res.) programme have to go through a course on Research Methods and Ethics, which is offered in Semester VII.

Science, Engineering Science, and HASS Electives

Options are available to the students to choose subjects from lists of science, engineering science, and HASS electives. Their distributions in the curricula are as under:

Semester I/II: Science Electives, Engineering Electives I and II, and HASS Electives I.

Semester IV: HASS Electives II

Semester V: HASS Electives III

Semester VI: HASS Electives IV

HASS Elective I includes Community/Environment-based project as one of the subjects. Done as a group work, the subject gives the students an opportunity to connect with the community and the environment, learn and prioritize their problems, and define them in ways that make them amenable to scientific analysis and pragmatic solution.

The lists of Science, Engineering Science, and HASS electives will be available in the ERP. Before a semester begins the Institute will announce the subjects that will be offered in that semester and the students will have to give their choice of electives out of the offered subjects.

Vocational Elective

Vocational Elective courses provide engineering students a deeper appreciation of the practical aspects of engineering and allow them to relate their theoretical knowledge with practical skills. This subject is included in Semester III. A student must opt for one of the vocational electives which will be announced at the beginning of a semester.

Open Electives

Open electives allow students to choose subjects from lists of subjects offered by all the Schools. It is through these subjects that a student can pursue his or her latent interests in specific areas and work towards earning a Minor in an area which is outside his (or her) major engineering branch (if the subjects are selected in specific designated areas). These subjects are offered in Semester V through Semester VIII:

Semester V: K-Explore—Practice-based Open Elective I

Semester VI – VIII: Open Electives II, III, and IV

K-Explore is a 1-Credit Practice-based Open Elective that allows the students to use the scope that the Clubs and the Societies of KIIT University provides to learn the skills of Dance, Music, Photography, etc. and of conducting seminars and conferences through training, practice, and direct involvement.

Minor

The curricula allow a student to earn a Minor in an area outside the core discipline in which he (or she) has registered. For example, a student doing B. Tech in Mechanical Engineering (his/her parent branch) can choose to have a Minor in Computer Science Engineering. To get a Minor, a student must

- (i) Get the fourth semester CGPA of 7.0 or more,
- (ii) Successfully fulfill the coursework requirement for at least six theory subjects and two credit Lab/project subjects in an area or discipline other than the one for which he (or she) is registered, and
- (iii) Complete at least 20 Credits of coursework in that area.

Thus, if a student has taken three Open Electives in one area other than his (or her) own then he (or she) must choose three theory subjects and two Lab/project subjects in that area in the Fourth year.

If no Lab subject is available in that Minor, then the student must choose an additional theory subject with at least 2 Credits. Students having no backlogs till the end of Semester 4 and a minimum CGPA of 7.0 will only be allowed to opt for the Minor scheme. Students opting for Minor have to mandatorily attend a minimum of 75% Theory and Lab classes (as the case may be) failing which the Minor option will be withdrawn.

Professional Electives

Professional elective subjects provide the students the opportunity to concentrate in certain specific areas of their interest. These subjects are offered in Semester V through Semester VIII for B. Tech. (Hons.) students (total 15 credits) and in Semester V through Semester VI for B. Tech. (Res.) students (total 9 credits). The distribution of these subjects is given below:

Semester V: Professional Electives (6),

Semester VI: Professional Electives (3),

Semester VII: Professional Electives Theory (3 Credits) for only B. Tech (Hons.) students

Semester VIII: Professional Core Theory (3 Credits) for only B. Tech (Hons.) students

Research Electives

The students pursuing B. Tech. (Res.) degree may need specialized knowledge in the areas of their theses. For this reason, the curriculum provides for two research electives to be selected in Semester VII and Semester VIII. Every School prepares a list of Research Electives and announces, at the beginning of every semester, the subject which will be offered in that semester. The student is required to select the electives from out of these offered lists.

Summer Internship

Internship exposes the students to the realities of engineering systems. Every student must go through at least 60 days of internship. It can be taken in an industrial organization or at an institute of higher learning in the summer breaks after the second year and/or after the third year. Internship carries 2 Credits. And the grade secured by a student appears in the Semester VII Grade Sheet of the student.

Projects

Projects allow the students to work under the supervision of a faculty advisor and apply their acquired knowledge to solve the real-world problems. They define problems, mine information from past works, conceptualize forces and factors that impact the problems, develop design solutions, and demonstrate the effectiveness of the solutions. Semester-wise distribution of this subject is given below:

Semester VI: Mini Project (2 Credits)

Semester VII: Project I (5 Credits)

Semester VIII: Project II (9 Credits for B. Tech. (Hons.) and 12 Credits for B. Tech. (Res.))

Semester-away Provision for Project II

The Institute sometimes allows a student to carry out the fourth-year project (Project II) away from the University campus if the following conditions are satisfied:

- This provision applies to Project II.
- That means a student can avail of this provision in Semester VIII.
- The project must be done either in an industrial unit or in an academic institution.
- The organization in which the student wishes to carry out the project must give in writing that it will provide all facilities (office space, equipment, instrument, data, and travel and stay facilities, if possible)

for the student to do the project. In addition, it will also identify a senior and competent employee of the organization to whom the student will report.

- The faculty supervisor must recommend the student's application for availing the semester-away provision.
- A co-supervisor from the organization may be appointed for the project.
- The intending student gives an undertaking that he (or she) will
 - Remain in constant touch with the faculty supervisor,
 - Send monthly progress reports to the supervisor,
 - Give seminar presentations, whenever required.
 - Collect class notes, read books, and prepare for and appear at the examinations (online, if necessary). The student must also do and submit all home assignments given by the teachers and give seminar presentation (online) if necessary.

Since Semester VIII curricula have one theory subject (B. Tech. (Res.)) and two theory subjects (B. Tech. (Hons.)) students, a student applying for this provision will be exempted from attending the lectures on these subjects. But the student must give an undertaking that it will be his (or her) responsibility to collect class notes, read books and other reading materials, submit all home assignments, give seminar presentations (online if required) and prepare for and appear at the examinations.

Detailed Syllabus

Course Title	Physics
Course Code (Credit)	PH10001 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This subject is designed to enrich the basic knowledge of engineering students in the field of physics and to support the engineering and research programs. The subject will also help the students to develop mathematical models to understand the behavior of physical systems and phenomena.

Course Contents:

UNIT I

Oscillation:

Damped Harmonic Oscillation (under damped, over damped and critically damped), Energy decay, Relaxation time, Quality factor, Forced oscillation, Resonance, Coupled oscillations, Applications.

UNIT II

Waves and Interference:

Wave equation, Superposition of waves, Interference of light, Types of interference: Division of wave front and division of amplitude.

UNIT III

Interference in thin films:

Wedge shaped thin film, Newton's rings and their applications, Michelson interferometer, Applications.

UNIT IV

Diffraction:

Diffraction and its applications, Types of diffraction, Fraunhofer diffraction by a single slit, Plane diffraction grating (condition of maxima, minima), Maximum order of observable spectra, Absent spectra, and Dispersive power, Applications.

UNIT V

Quantum Mechanics:

Dual nature of radiation and matter, de Broglie hypothesis for matter waves, Phase velocity and Group velocity, Heisenberg's uncertainty principle and applications, Wave function and its interpretation, Concepts of operators, Schrodinger's time-dependent and time-independent equations, Postulates of Quantum mechanics, Particle in one-dimensional box and applications, Quantum tunnelling and applications.

UNIT VI

Electromagnetic Theory:

Vector calculus: scalar and vector field, Gradient, divergence and curl, Line, surface and volume integrals, Gauss divergence and Stoke's theorem, Maxwell's equations in differential and integral form with necessary derivations. Electromagnetic wave equations, Transverse nature of electromagnetic waves.

UNIT VII

Laser and Fiber Optics:

LASER: Properties and applications, Spontaneous and stimulated emission, Meta-stable state, Population inversion, Pumping, Three and four-level Laser, Ruby Laser.

UNIT VIII

Optical fiber

Principle, Construction, Types of optical fiber, Acceptance angle, Numerical aperture, Applications.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Learn the basic concepts of oscillation, waves, wave function and fields.
- CO2 : Understand the principles of wave phenomena in light and matter, and the quantum mechanics.
- CO3 : Apply the principles of oscillation, superposition of waves, electromagnetic theory, and quantum mechanics in different fields.
- CO4 : Analyze different types of particle motion in different media.
- CO5 : Evaluate the problem-solving skills for the topics learnt.
- CO6 : Develop critical thinking ability supported by the learned concepts of Physics.

5. R K Gaur and S. L. Gupta, Engineering Physics, Dhanpat Rai Publications, New Delhi, 2nd Edition, 2012, ISBN-10: 8189928228.

Course Title	Chemistry
Course Code (Credit)	CH10001 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This course is designed to enrich the students with the basic concepts in Chemistry and to strengthen their fundamentals which will support them to pursue education and research in engineering. The course will help the students to conceptualize alternative sources of energy by electrochemical means and use the instrumental techniques to explore chemical products.

Course Contents:

UNIT I

Chemical Equilibrium and Thermodynamics:

Introduction, Internal energy, Enthalpy, Entropy and free energy, Dependence of free energy on temperature and pressure, Gibbs-Helmholtz equation, Free energy change and equilibrium constants, Van't Hoff isotherm and isochore, Clapeyron- Clausius equation, Partial molar properties, Chemical potential, and Gibbs-Duhem equation.

UNIT II

Chemical Kinetics:

Rate of reaction and rate laws of multiple reactions (steady-state approximation), and of parallel, opposing and consecutive reactions; Theories of reaction rate: Collision theory, Lindemann modification, Absolute reaction rate; Catalysis: Types, theories, and kinetics of enzyme catalysis (Michaelis-Menten mechanism).

UNIT III

Spectroscopy:

UV-Vis spectroscopy: Beer-Lamberts law, Types of transition, Concept of auxochrome and chromophores, Factors affecting λ_{\max} and, Woodward-Fieser rules for calculation of λ_{\max} in diene systems; IR spectroscopy: Types of vibration, Hooks law, detection of functional groups like C=C, -OH, -NH₂ and -C=O;

UNIT IV

NMR Spectroscopy:

Basics of NMR Spectroscopy: Theory, Chemical shift, Shielding-deshielding effect, Structural elucidation of simple compounds.

UNIT V

Electrochemical Energy Systems:

Types of electrodes, electrode/cell potential; Nernst equation and application to: find electrode and cell potential, equilibrium constant, solubility product and pH; Modern batteries: Fuel cells (AFCs, PEMFs, SOFCs, MCFCs), Zn-air battery, Li-ion battery, Na-ion battery, Ni-MH battery.

UNIT VI

Smart and Intelligent Materials:

Introduction to smart materials, Properties and types of smart materials, Structures, System intelligence- components and classification of smart structures, Common smart materials and associated stimulus-response, Application areas of smart systems.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Rationalize bulk properties and processes using thermodynamic consideration and apply the knowledge to decide the feasibility of a given process,
- CO2 : Analyze the kinetics of multistep reactions as well as the theories of reaction rates,
- CO3 : Understand the importance of catalysis and their mechanism of action and applications,
- CO4 : Apply the principles of electrochemistry to evaluate properties, such as pH, solubility Product, etc. and understand the working principle of modern batteries,
- CO5 : Apply different spectroscopic techniques, such as UV-Vis, IR and NMR, for structural Elucidation, and
- CO6 : Differentiate between smart and intelligent materials.

Course Title	Environmental Science
Course Code (Credit)	CH10003 (L-T-P-Cr: 2-0-0-2)

Course Objective:

This course is designed to create awareness in the students on monitoring, assessment, and management of environmental pollutants. The subject will also make the students aware of more benign chemistry, i.e., green chemistry, and help them to understand the implementation of Environmental Impact Assessment (EIA).

Course Contents:

UNIT I

Overview of the Environment:

Overview of the environment, terminologies, Components of Earth: Lithosphere, atmosphere, hydrosphere and biosphere, Concept of black body radiation and albedo, eZro-dimensional energy balance model.

UNIT II

Air Pollution and Control:

Primary and secondary air pollutants, CFC, Smog (oxidizing and reducing), Important environmental issues: Depletion of the ozone layer, Acid Rain, Greenhouse effect and global warming, Control measures: Baghouse filter, Cyclone separator, Electrostatic precipitator, Catalytic converter, and Scrubber.

UNIT III

Water Pollution and Control:

Types and sources of water pollutants, wastewater treatment techniques: Ultrafiltration, aerobic and anaerobic treatment, Reverse osmosis, Electrodialysis, Ddisinfection by chlorination, Ozonization, Modern water purification system, Water quality parameters like hardness, Water softening process (permutit), WHO guidelines for drinking water.

UNIT IV

Soil Pollution and Solid Waste Management:

Soil pollution: Sources of pollutants and mitigation measures. Types of solid wastes: Heavy metal, bio-medical and radioactive wastes, Toxic and biochemical effects of solid wastes, Solid waste management (landfilling, incineration, and composting).

UNIT V

Green Chemistry and EIA:

Basic principles of green chemistry with examples, Matrices to explain greenness, R⁴M⁴ model, life cycle analysis. Importance, scope and principles of EIA with a case study.

Course Outcomes:

Upon completion of this course, the students will be able to

- CO1 : Understand the components and composition of the environment along with the radiation balance model,
- CO2 : Rationalize the different types of pollutants, their sources, effects, and control measures,
- CO3 : Develop the idea of water purification strategies,
- CO4 : Identify toxic wastes and conceptualize the principles of solid waste management,
- CO5 : Conceptualize the principles of green chemistry and implement them in the synthesis of advanced material, to reduce pollution, and
- CO6 : Provide for Environmental Impact Assessment (EIA) requirements before planning a project.

Course Title	Physics Laboratory
Course Code (Credit)	CH19001 (L-T-P-Cr: 0-0-2-1)

Course Objective:

This lab course covers different measurement techniques of various parameters using the instruments i.e. interferometer, spectrometer, spherometer, screw gauge, vernier calliper, microscope, and telescope. It includes the application of photoelectric effect and photovoltaic effect in photo cell and solar cell respectively. Evaluation of the mechanical strength of materials by calculating elastic constants such as Young's modulus, rigidity modulus and Poisson's ratio are also included. This course provides hands on training for the usage of electrical, optical and mechanical systems for various measurements with precision and analysis of the experimental data by graphical interpretation and error calculation.

Course Contents:

Measurement by vernier callipers, screw gauge, spherometer: A review

- Determination of wavelength (λ) of a monochromatic light by Newton's ring experiment.
- Determination of wavelength (λ) and difference ($d\lambda$) between wavelengths of sodium D-lines by Michelson's interferometer.
- Determination of grating element ($e+d$) of a plane diffraction grating.
- Determination of Planck's constant using photocell.
- Study of the characteristics of a photo cell.
- Study of the characteristics of a solar cell.
- Determination of Young's modulus (Y) of a material by bending of beam method.
- Determination of Poisson's ratio (σ) of rubber.
- Determination of rigidity modulus (η) of a material by dynamic method.
- Determination of refractive index (μ) of a transparent liquid by Boy's method.
- Determination of numerical aperture of optical fibre.
- Determination of acceleration due to gravity (g) by bar pendulum.
- Determination of damping coefficient, relaxation time and quality factor of damped harmonic oscillation by simple pendulum.
- Measurement of velocity of sound in air using resonance column method.
- Studies on dielectric/multi-ferroic materials (Open ended)
- Diffraction studies using Laser sources (Open ended)

Course Outcomes:

Upon completion of this course, the students will be able to

- CO1 : Understand the wave nature of light through experiments based on interference and diffraction Phenomena.
- CO2 : Apply the laws of quantum physics to understand the photoelectric emission using the particle nature of light.
- CO3 : Characterize photovoltaic cells to find out efficiency in terms of power output.
- CO4 : Evaluate mechanical properties of materials using their elastic properties.
- CO5 : Apply the principles of optics such as refraction, total internal reflection to calculate refractive index and related parameters.
- CO6 : Use the principles of oscillation to understand phenomena such as damping, resonance and to determine the factors (such as gravity, elasticity etc) affecting the time period of various oscillators.

Reference Materials:

2. S. L. Gupta and V. Kumar, 2018, Practical Physics, Pragati Prakashan, 33rd Edition, ISBN: 978-93-87151-58-1.

Course Title	Chemistry Laboratory
Course Code (Credit)	CH19001 (L-T-P-Cr: 0-0-2-1)

Course Objective:

This lab course covers different types of chemical experiments ranging from volumetric analysis to spectroscopic techniques. This course provides the students with hands-on training in many of the advanced spectroscopic and analytical techniques in chemistry. The experiments in the course span over diverse applications in chemistry. It contains experiments dealing with environmental chemistry, volumetric analysis, organic and inorganic synthesis, electrochemistry, and spectroscopy.

Course Contents:

- Estimation of total hardness in a given water sample in terms of calcium and magnesium hardness by EDTA method.
- Estimation of the amount of NaOH and Na₂CO₃ present in a given mixture solution
- (a) Determination of the strength of KMnO₄ solution by using standard sodium oxalate solution. (b) Determination of the amount of Ferrous (Fe²⁺) ions present in the Mohr's salt solution by using standard KMnO₄ solution.

- Determination of the amount of dissolved oxygen present in a given water sample by Winkler's method.
- Finding the strength of Fe^{2+} present in the supplied Mohr's salt solution by potentiometric titration.
- Determination of the rate constant of acid-catalyzed hydrolysis of ethyl acetate.
- Determination of the chloride ion (Cl^-) present in a given water sample by the argentometric method.
- Finding the strength of supplied acid by pH-metric titration against a standard alkali.
- Finding the strength of a given hydrochloric acid solution by titrating it against standard sodium hydroxide solution conducto-metrically.
- Verification of Beer Lambert's Law and application of this law to determine the unknown concentration of a given solution.
- Determination of the concentration of ferric ions (Fe^{3+}) in a given water sample by a spectrometric method using KCNS as color developing agent.
- Determination of the Isoelectric point (pI) of glycine amino acid.
- Synthesis of transition metal complexes and characterization by using IR and $^1\text{H-NMR}$. (Open ended)
- Determination of the concentration of different ions (cations and anions) in a given water sample by colorimetry. (Open ended).
- Application of potentiometric titrations (Open ended).

Course outcomes:

Upon completion of this course, the students will be able to

- CO 1 : Handle different chemicals with proper safety protocols in an advanced Chemistry laboratory.
- CO 2 : Learn and apply basic techniques used in Chemistry laboratory for preparation, purification and identification.
- CO 3 : Analyze the kinetics of 1st order reactions and estimate the rate constant.
- CO 4 : Use different instrumental techniques such as Conductometry, pH-metry, Potentiometry and Colorimetry.
- CO 5 : Analyse basic water quality parameters like hardness, dissolved oxygen, alkalinity, chloride ferrous iron contents etc.
- CO 6 : Rationalize and learn the spectroscopic and synthesis techniques in chemistry.

3. Standard methods for examination of water and wastewater, 23rd Edition, APHA.

Course Title	Differential Equations And Linear Algebra
Course Code (Credit)	MA11001 (L-T-P-Cr: 3-1-0-4)

Course Objective:

The objective of this course is to familiarize the prospective engineers with techniques in ordinary differential equations and linear algebra. It aims to equip the students to tackle advanced level of mathematics and applications that they would find useful in their disciplines.

Course Contents:

UNIT I

Ordinary Differential Equations of First Order:

Introduction and formation of differential equations, Overview: Variable separable, homogeneous, equations reducible to homogeneous form. Exact differential equations, equations reducible to exact form, linear differential equations, equations reducible to linear form (Bernoulli's equation). Applications of differential equations: Growth-Decay Problem, Newton's Law of Cooling, Mixing problem, Orthogonal trajectories.

UNIT II

Linear Differential Equations of second order:

Second order linear homogeneous equations with constant coefficients; differential operators; solutions of homogeneous equations; Euler-Cauchy equation; linear dependence and independence; Wronskian; Solutions of non-homogeneous equations: general solution, complementary function, particular integral; solution by variation of parameters; undetermined coefficients. Applications of 2nd order differential equations in Electric circuit.

UNIT III

Special Functions:

Improper Integrals for one variable, some test for convergence of improper integrals, Gamma function, Properties, Beta function, Relation between Gamma and Beta functions. Radius of convergence of power series, Legendre equation. Legendre polynomial. Recurrence relations and Orthogonality property of Legendre polynomial. Bessel's equation, Bessel's function, Recurrence relation.

UNIT IV

System of Linear Equations and Vector Space:

Linear system of equations; rank of matrix; consistency of linear systems; Solution of system of linear equations: Gauss elimination, inverse of a matrix by Gauss Jordan method, Vector Space, Sub-space, Basis and dimension, linear dependence and independence, Linear transformation.

UNIT V

Matrix-Eigen value problems:

1. Eigen values, Eigen vectors, Eigen basis, quadratic form; Hermitian, Skew-Hermitian forms; similar matrices; Diagonalization of matrices.

Course Outcomes:

Upon completion of this course, the students will be able to

CO1 :Understand the concept of modelling and formulation of Differential equation of physical problems,

CO2 :Apply different methods to solve ODE problems involving growth-decay, cooling effects and electrical circuits etc,

CO3 : Develop an ability to solve 2nd and higher order ODEs,

CO4 : Apply the knowledge of special function in engineering problems,

CO5 :Use the essential tool of matrices and linear algebra in a comprehensive manner, and

CO6 : Apply the knowledge of Eigen value and Eigen vector in the field of engineering and also get the concept of complex matrices.

Textbooks:

4. J. Sinha Roy and S. Padhy, A course on ordinary & partial differential Equation, Kalyani Publication, 3rd Edition.

Course Title	Transform Calculus And Numerical Analysis
Course Code (Credit)	MA11002 (L-T-P-Cr: 3-1-0-4)

Course Objective:

The objective of this course is to familiarize the students with the methods of Laplace and Fourier transformation and various numerical techniques to solve engineering problems.

Course Contents:

UNIT I

Laplace Transforms:

Laplace Transform, Inverse Laplace Transform, Linearity, Transform of derivatives and integrals, Unit Step function, Dirac delta function, Second shifting theorem, Differentiation and integration of transforms, Convolution, Solution of ODEs and integral equation by Laplace transform.

Fourier Series and Transform: Fourier series, Arbitrary periods, Even and odd functions, Half range expansions, Fourier integral, Cosine and sine transforms, Fourier Transform, Inverse Fourier Transform, Linearity, Fourier Transform of derivative, Convolution.

UNIT II

Approximations & Errors:

Approximation of numbers by truncation and rounding-off, Types of errors.

Numerical solution of Nonlinear equations: Solutions by Bisection Method, Fixed Point Iteration Method, Newton-Raphson Method, Regula-Falsi and Secant Method, Rate of Convergence of Secant & Newton-Raphson Method.

UNIT III

Interpolation & Approximation:

Finite Differences, Operators and Relation between them. Interpolation: Newton's forward and backward difference interpolation, Newton's divided difference interpolation and Lagrange interpolation.

Numerical Differentiation & Integration: Numerical differentiation of first- and second-order equations using difference table. Trapezoidal rule, Simpson's $1/3^{\text{rd}}$ and $3/8^{\text{th}}$ rules, Gauss-Legendre's two-point and three -point formulae. Error in Numerical Integration.

UNIT IV

Numerical Solution to ODE:

Taylor's (OK?) series Method, Euler's Method, Modified Euler's Method, Runge-Kutta Methods of order 2 and 4, Reduction of second-order ODE to system of first-order ODEs and its solution by R-K method of order four.

Solution of System of Linear Equations, Solutions by Gauss-Seidel and Gauss-Jacobi methods.

Course outcomes:

Upon completion of this course, the students will be able to

- CO1 : Apply Laplace Transform to problems in the field of science and engineering,
 CO2 : Use Fourier series and Transform as a tool to solve differential equations,
 CO3 : Estimate the error in the results obtained in the numerical methods,
 CO4 : Solve nonlinear equations that arise in engineering problems and interpolation,
 CO5 : Know various numerical methods of differentiation and integration, and
 CO6 : Apply numerical solution of differential equations and systems of linear equations.

Course Title	Science Of Living Systems
Course Code (Credit)	LS10001 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The objective of the course is to enrich the basic knowledge of students in the field of biology and use that knowledge to support the engineering and research programs. Besides, the course also helps to learn methodology to establish models for various biological phenomena and apply the aforementioned models to predict/analyse the functionality of various systems.

Course Contents:**UNIT I****Cellular Organization of a Living Organism:**

Biology in engineering, The Living World: Biodiversity of living world, Microorganisms, Cell as the basic unit of life, Cell theory, Structure and

function of Prokaryotic and Eukaryotic cells, Cell growth and reproduction, Homeostasis, Concept of gene, Basic structure and function of chromosomes.

UNIT II

Molecular and Biochemical Basis of an Organism:

Chemical Context of Life: Water, Carbon, Structure and Function, Types of bonding, Bio- macromolecules (Carbohydrates, Proteins, Amino acids, Lipids and Nucleic acids), Protein synthesis, Cell differentiation, Stem cells and their applications.

UNIT III

Enzymes, Photosynthesis, Metabolism and Bioenergetics:

Enzymes: Introduction, structure, properties, Classification, Mechanism of enzyme actions, Factors affecting enzyme action, Strategies utilized by enzymes to affect catalysis. Photosynthesis: Introduction, pigments, process of photosynthesis, Mechanism of photosynthesis (light reaction and dark reaction). Metabolism and Bioenergetics: Anabolism and catabolism.

UNIT IV

Nervous system, Immune system and Cell Signaling:

Nervous system: Introduction, History of neuroscience, Types of glial cells, Nerve cells - Neurons, Organization of the nervous system, Action potential, Diseases of the nervous system, Computer-based Neural Networks. Immune system: Introduction, Innate Immunity, Adaptive or acquired immunity, Diseases of the immune system, Immune engineering. Cell signaling: General principles of cell signaling.

UNIT V

Molecular Machines, Biosensor and Bioremediation:

Molecular Machines: Introduction, Molecular motors and Machines, FOF1-ATP synthase motors, Cytoskeleton associated motors. Biosensors: Concept of biosensor, Working principle, Types of biosensors, Glucose biosensors, Bio-detectors: DNA detection biosensor, Detection of pollutants, Biosensor in food industry. Bioremediation: Introduction, Role of microorganisms, Factors determining bioremediation, Types – *in situ/ex situ*, Advantages and disadvantages, Biofuel.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 :Learn the typical characteristics that distinguish life forms and analyze life process at cellular level,
- CO2 :Apply concepts on structure and function of simple biomolecules in life processes
- CO3 : Understand different process involved in life and analyse their effects,
- CO4 : Analyse different biological phenomena and relate them to engineering applications,

CO5 :Comprehend different physiological functions and relate them to computer-based techniques, and

CO6 : Implement concepts of biology and their relevance to engineering and technology.

Course Title	English
Course Code (Credit)	HS10001 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The objective of the course is to develop and improve, in the students, the skills of active listening, speaking, reading, and writing in English, through lecture classes and practice sessions, and improve their professional communication abilities. The course will help the students to enhance their critical thinking and situational communicative skills through the study of contemporary social issues depicted in literature.

Course Contents:

UNIT I

Professional Communication:

Process of Communication: Definition, Explanation & Diagram, Difference Between General and Technical Communication; Methods of Communication (Verbal & Non-Verbal); Non-Verbal Communication (Kinesics, Proxemics, Chronemics, Oculistics, Olfactics, Gustorics, Haptics, and Iconics); Paralanguage; Flow of Communication (Formal & Informal); Levels of Communication; and Barriers of Communication (Intrapersonal, Interpersonal, and Organizational).

UNIT II

Basics of Grammar and Writing Skills:

Error Detection in Sentences: Articles, Prepositions, Tense, Subject-Verb Agreement, Active and Passive Voice; Use of Punctuation: Full Stop, Comma, Colon, Semi-colon, Single & Double Inverted Commas, Exclamation & Interrogation Marks, Hyphens and Dashes, and Ampersand;

Paragraph Writing – Components; Writing Bias-free English; Business Letters: Enquiry, Claim/Complaint, and Order; Technical Reports: Formats, Style & Referencing; and Reading Techniques: Skimming, Scanning, Intensive & Extensive Reading.

UNIT III

Basic Sounds of English:

Hearing & Listening: Types of Listening – Appreciative, Empathetic, Critical, Comprehensive, Superficial, Differences between Listening & Hearing; Introduction to Basic Sounds of IPA: Symbols of IPA, Types of Vowels & Consonants; and Problem Sounds & Mother Tongue Influence: Concept of MTI with Examples.

UNIT IV

English Literature:

Short Story – O. Henry: ‘Gift of the Magi;’ Short Story – Ismat Chughtai: ‘Sacred Duty;’; Poem – Robert Frost: ‘Stopping by Woods on a Snowy Evening;’ Poem – Tennessee Williams: ‘We Have Not Long to Love;’ and Drama: William Shakespeare: Merchant of Venice.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Apply verbal and non-verbal modes of communication effectively in practical Situations,
- CO2 : Retain a grammatically correct and logical flow while drafting reports and other technical pieces of writing,
- CO3 : Develop competence in reading and comprehension,
- CO4 : Implement active listening responses in professional practice,
- CO5 : Utilize neutral accent in English pronunciation successfully, and
- CO6 : Understand situational and conversational English used for different purposes and contents.

Textbooks:

1. M. Ashraf Rizvi, Effective Technical Communication, Tata McGraw Hill Education Publication, 2005.

Reference Books:

1. Sidney Greenbaum. The Oxford Grammar (English). Oxford University Press, 1st Edition. 2005.

2. S Verma, Technical Communication for Engineers, Vikas Publishing House, 2015.
3. R Dove, The Penguin Anthology of 20th Century American Poetry, Penguin Books. 2013.
4. The Merchant of Venice (The New Cambridge Shakespeare). Mahood & Lockwood eds. CUP. 2018.

Course Title	Communication Laboratory
Course Code (Credit)	HS18001 (L-T-P-Cr: 0-0-2-1)

Course Objective:

This subject is designed to enrich the basic knowledge of engineering students in the field of communication and to support the engineering and research programs.

Course Contents:

UNIT I

Reading Comprehension:

Understanding meaning and sequence of ideas in written language

Activity based on matching, multiple choice questions, open close, appropriate headings.

UNIT II

Time & Tense + Subject-Verb Agreement:

Applying correct grammar in everyday writings.

UNIT III

Vocabulary Building (Mind Mapping/Phrasal Verbs):

Developing vocabulary through associating key ideas, and learning idioms and phrases.

UNIT IV

Listening Comprehension:

Interpreting meaning and syntax in spoken language.

UNIT V

E-mail Writing:

Formulating appropriate e-mails with relevant salutation, language & conclusion

UNIT VI

Resume Writing/ Video Resume

Creating suitable, job-oriented resume

UNIT V

Thematic Speaking:

Practising and implementing theme-based individual speaking skills.

UNIT VI

PowerPoint Presentation

Developing skills to design and deliver engaging, informative and impactful presentations

UNIT VII

Class Participation.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Use English grammar correctly and unambiguously in technical writing,

CO2 : Apply verbal and non-verbal modes of communication effectively in practical situations,

CO3 : Have a basic understanding of the communication process and to know the practical implementations in the workplace,

CO4 : Retain a logical flow while drafting reports and other technical pieces of writing,

CO5 : Develop competence in reading and comprehension, and

CO6: Be familiar with English pronunciation and use neutral accent successfully.

Course Title	Basic Electronics
Course Code (Credit)	EC10001(L- T- P-Cr: 2-0-0-2)

Course Objective:

The subject is designed to familiarize students of all branches to the all-pervasive field of Electronics, enable them to carry out research in interdisciplinary fields involving semiconductor devices, and utilize the knowledge in solving practical problems in real life in today's age of electronics.

Course Contents:

UNIT I

Semiconductors, Diodes and Transistors:

Properties of semiconductor materials, Applications of semiconductors as p-n junction diode, Diode characteristics and breakdown mechanisms, Half-wave and full-wave rectifiers with filters, Zener diode, Transistor constructions, operations and their characteristics. Transistor biasing, amplifiers, and load line analysis, Concepts of JFET and MOSFET.

UNIT II

Operational Amplifier (Op-amp) and applications:

Introduction to Op-amp and its Characteristics. Application of Op-Amp as Inverting amplifier, Non-inverting Amplifier, Summing, Difference amplifier and comparator

UNIT III

Introduction to Digital Electronics:

Different number systems and its conversions, Logic gates and truth tables of OR, AND, NAND, EX-OR. Combinational circuit and Sequential circuit.

UNIT IV

Miscellaneous Electronic Devices

SCR, Opto-electronic devices and fiber techniques, Introduction and description of sensor performance, Fundamentals of analog communication techniques (AM and FM).

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Understand the properties of semiconductor and current conduction mechanism,

CO2 : Comprehend the working of P-N junction diodes; identify different diode circuits and analyze them,

CO3 : Understand the working of different types of transistors,

CO4 : Know about OP-AMP and its applications,

CO5 : Analyze the working of op-amp using either inverting or non-inverting configurations, timing circuit, regulated power supply ICs, and their applications, and

CO6 : Realize the importance of various analog and digital electronic systems and electronic devices.

Textbooks:

Course Title	Workshop
Course Code (Credit)	ME18001(L-T-P-Cr: 0-0-2-1)

Course Objective:

This workshop practice is designed to impart students the basic knowledge on manufacturing or developing a given object irrespective of their branch of engineering. While furnishing the given object, students will familiar with various mechanical operations and the respective tools or machines. This course involves four different sections namely Fitting, Welding, Turning and Sheet metal which cover both conventional and advanced tools to provide students the updated manufacturing experience. Students are also advised with various safety precautions to be followed during a specific manufacturing practice. At the end, students will also gain knowledge on different advanced machines such as CNC machine tools and 3D printing.

Course Contents:

- Turning operations
- Sheet metal operations
- Fitting
- Welding

Course Outcomes:

Upon completion of this course, the students will be able to

CO1 : Practice different operations related to fitting shop.

CO2 : Use different welding tools to prepare a given type of joint.

CO3 : Demonstrate various turning operations including taper turning and knurling using a conventional lathe machine.

CO4 : Design a tray and prepare it using sheet metal equipment involving soldering.

CO5 : Appraise different operations using a CNC machines.

CO6 : Interpret different advanced machines such as 3D printing/additive manufacturing.

Course Title	Engineering Drawing & Graphics
Course Code (Credit)	CE18001 (L-T-P-Cr: 0-0-2-1)

Course Objective:

The objective of this course is to provide students with knowledge and abilities to design a 3D object on 2D paper by hand sketching method and by means of computer aided drafting software.

Course Contents:

- Introduction to Engineering graphics
- Lettering
- Projection of points & lines

- Line inclined to both the planes
- Projection of planes
- Introduction to Computer Aided Drafting
- Projection of solids
- Section of solids
- Development of surface

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Use common drafting tools properly.

CO2 : Select, construct and interpret appropriate drawing scale as per the situation.

CO3 : Draw orthographic projections of points, lines and planes.

CO4 : Draw orthographic projection of solids like cylinders, cones, prisms and pyramids,

CO5 : Develop the section of solids for practical situations, and

CO6 : Communicate ideas effectively using Computer Aided Drafting.

Course Title	PROGRAMMING LABORATORY
Course Code (Credit)	CS13001 (L-T-P-Cr: 0-2-4-4)

Course Objective:

The course aims to provide exposure to problem-solving through programming. It aims to train the student to the basic concepts of the C-programming language. This course involves lab component which is designed to give the student hands-on experience with the concepts.

Course Contents:

UNIT I

Introduction to Computer and Programming:

Basic concepts of computer organization, CPU, Memory. I/O devices, Number Systems , Evolution of programming languages, structured programming, Compilation process, source code, object code, executable code, Operating systems, interpreters, linkers, loaders, Algorithms, flow charts, pseudo-code.

Program Constructs:

Character set, Identifiers, Keywords, Data Types, Constant and Variables, Operators: Precedence and associativity, Expressions, Statements, Input and Output functions, Control structures: Branching & Looping.

UNIT II

Arrays and Strings:

One dimensional Array, Multidimensional Array and their applications, String Manipulation.

UNIT III

Functions:

Library and User defined functions, Formal and Actual parameters, function prototypes, Parameter passing: Call

By-value, Call-by-reference, Recursion, Storage Classes.

UNIT IV

Pointers:

Pointer variable, Pointer Arithmetic, passing parameters by reference, pointer to pointer, pointers to functions, Dynamic memory allocation.

UNIT V

Structures, Unions:

Structures, Unions, pointer to structure & pointer to union, linked list.

UNIT VI

File Handling:

Declaration of file pointer, opening and closing files, Working with text and binary files. Command line arguments, bit wise operators, enumerated data types, type casting, macros, Preprocessor directives.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Have fundamental knowledge of computers hardware and number systems with commands in Linux,

CO2 : Write, compile and debug programs in C language.

CO3 : Design programs involving decision structures, loops, and functions.

CO4 : Construct arrays to store, manipulate, search and display data.

CO5 : Apply the dynamics of memory by the use of pointers.

CO6 : Use different data structures and create/update basic data files.

Text books:

T1: Programming in ANSI C (8th Edition) by E. Balagurusamy

Reference books:

List of Experiments:

Sr	Details
1	Write All Linux commands in the LAB report
2	Practice and write programs on simple input and output operations
3	Practice and write programs on Operators and Expressions
4	Practice and write programs on branching statements
5	Practice and write programs on looping (control) statements
6	Practice and write programs on Arrays
7	Practice and write programs on Character Arrays
8	Practice and write programs on Functions
9	Practice and write programs on Pointers
10	Practice and write programs on Structures
11	Practice simple programs on file handling

SCIENCE ELECTIVE

Course Title	Nanoscience
Course Code (Credit)	CH10005 (L-T-P-Cr: 2-0-0-2)

Course Objective:

This course is designed to educate, inspire, and motivate young students about nanoscience, nanotechnology, and their applications. The course provides information on the latest innovations in this field to get insights into the nanomaterials synthesis/fabrication and applications that can be achieved at a nanoscale.

Course Contents:

UNIT I

Introduction:

Concept and Classifications based on dimensions and compositions, Significance of nanosize: Surface area to volume changes; Properties changing

with size (reactivity, melting point, catalytic, electrical, optical), Nanoscience in nature, and Quantum dots as data storage.

UNIT II

Synthesis of nanomaterials:

Top-down synthesis (Mechanical method-ball milling, Photolithography, Laser ablation, sputtering), Bottom up (pyrolysis, sol-gel, CVD, self-assembly), Green synthesis (metallic nanoparticles, metal oxides), Biosynthesis.

UNIT III

Characterization:

XRD-X-ray generation, Working principle (Bragg's law), Peak broadening in nanomaterials (Scherrer formula), Electron microscopy (SEM, TEM)—high energy electron generation, electron optics, Scanning Electron Microscopy (SEM)—secondary, back scattered, EDX, Transmission Electron Microscopy (TEM)—bright field imaging, dark field imaging, and Selected area diffraction pattern.

UNIT IV

Applications:

Cosmetics—ZnO, SiO₂, TiO₂ Nanoparticles in cosmetics, SiO₂ TiO₂ in toothpaste, silver, gold, copper nanoparticles in skin care product; **Medical Fields**—MRI, CT scan contrast enhancement agent, Drug and gene delivery system, Magnetic hyperthermia treatment; **Agriculture**—Nano-pesticides, herbicides, and fungicides, Food packaging; **Aerospace and Aviation Industries**—Carbon nanotubes (CNT)nanocomposites, Metal Nanoparticle-Polymer composites, SiC Nanoparticle reinforced alumina (high temperature strength, creep resistance); and **Nanomaterials for Environmental Remediation**—Degradation/removal of pollutants.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Learn fundamental aspects of nanoscience,

CO2 : Classify different types of nanomaterials based on their dimension and composition

CO3 : Understand different synthesis techniques to grow nanomaterials,

CO4 : Analyse nanomaterials using different characterisation techniques,

CO5 : Apply the acquired knowledge to design new materials, and

CO6 : Evaluate the importance of nanoscience in engineering applications.

Course Title	Smart Materials
Course Code (Credit)	PH10003 (L-T-P-Cr: 2-0-0-2)

Course Objective:

This course is designed with the objective of enabling engineering students to get a flavour of advances in materials science. The knowledge of smart materials learnt by the students in the course will let them to realize the usefulness of various new-age materials for technological advances and allow them to explore further in their higher semesters. This course will help them bridge the gap between traditional Textbooks: science put into physics, chemistry, etc. and the state-of-the-art science of materials.

Course Contents:

UNIT I

Introduction to Smart Materials:

common smart materials and associated stimulus-response, Classification: active and passive, Piezoelectric, Shape-memory alloys, Photo-responsive polymers, Electroactive polymers, Magnetostriction and Electro-strictription, Thermo-responsive polymers, Dielectric elastomers, [Halochromic](#), Thermoelectric materials; Application areas of smart materials: Space, health care and biomedical sectors.

UNIT II

Piezoelectric Materials: Piezoelectric Effect:

Direct and Converse, Piezoelectric coefficients, Piezoceramics, Piezopolymers, Piezoelectric Materials as Sensors, Actuators etc.

UNIT III

Shape-memory Alloys:

Shape memory alloys (SMAs) and properties, Phase change in SMAs, Shape memory effect: One-way and two-way, binary, and ternary alloy systems, Applications.

UNIT-IV

Chromic Materials:

Photochromic, Thermochromic, Electrochromic, Magneto-chromic and Piezo-chromic Materials.

UNIT V

Multiferroic Materials:

Multiferroics definitions, Ferroic phases, Magnetoelectric coupling; Type-I and Type-II multiferroics, Mechanism: Charge ordering, lone pair, geometric effect, and spin driven mechanism; Multiferroic materials, Applications.

Course outcomes:

Upon completion of this course, the students will be able to:

CO1 : Learn about smart materials, their properties and applications,

CO2 : Understand types of smart material based on their electrical and magnetic properties,

CO3 : Characterize piezoelectric, ferroelectric and multiferroic materials,

CO4 : Identify novel functions of smart materials,

CO5 : Apply the acquired knowledge of smart materials in different applications, and

CO6 : Evaluate the importance of smart materials in day-to-day life.

Textbooks:

Course Title	Molecular Diagnostics
Course Code (Credit)	LS10003 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The objective of the course is to understand methods and techniques that are used to study biological processes in living beings. They include experimental and methodological approaches, protocols and tools for biological research.

Course Contents:

UNIT I

Bimolecular:

Overview of DNA, RNA, and Proteins, Chromosomal structure & mutations, DNA polymorphisms; and Gene and Genetic errors.

UNIT II

Molecular Basis of Diseases:

Infectious, non-infectious; Diagnosis- traditional, modern tools, Concepts of molecular diagnostics.

UNIT III

Molecular Diagnosis and Techniques:

DNA fingerprinting, Auto-antibody fingerprinting, Southern blotting, PCR, Real-time PCR and variations; Nucleic acid sequencing: New generations of automated sequencers, CRISPR technology and its use in diagnostics and gene editing.

UNIT IV

Protein Diagnostics Techniques

Antigen-antibody reactions, ELISA, variations of ELISA; Western blotting.

UNIT V:

Point-of-Care Devices

Biosensors and nano-biosensors for disease and metabolites detection.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Learn the basics of Genes, Chromosomes, DNA, RNA and proteins along with their Aberrations,
- CO2 : Understand the principles and working mechanisms of various instruments used in the study of biological processes in living things,
- CO3 : Apply the knowledge of different diagnostics methods for quantitative estimation of xenobiotics (drugs and their metabolites) and biotics (proteins, DNA, metabolites) in biological systems,
- CO4 : Analyze the recent developed techniques which are required for gene editing and their Applications,
- CO5 : Evaluate the role of various bio-analytical techniques in environmental studies, biomedical sciences, life sciences, molecular biology, and biotechnological research, and
- CO6 : Implement the knowledge of diagnostics in designing point-of-care instruments for different diseases.

Course Title	Science Of Public Health
Course Code (Credit)	PE10002 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The objective of this course is to orient the students to core scientific disciplines in public health practice.

Course Contents:**UNIT I****Scientific Approaches to Public Health:**

Health and public health concepts, Science and practice of applied public health: Scientific disciplines as part of interdisciplinary public health, Examples of use of behavioral model in changing the community perception of public health interventions

UNIT II**Social and Behavioral Sciences in Public Health:**

Social and behavioral determinants of health and disease, WHO and CDC models of social determinants of health, Disease and social status, Disease and poverty, Social interventions for good health.

Health behavior change models for public health interventions, Health Belief Model, Transtheoretical Model. The theory of planned behavior, Health communication to improve the outcome of public health interventions

UNIT III**Environment Health Sciences in Public Health:**

Environment & climate change, Ecosystem, Lifestyle and dietary effects on health, food safety and sanitation, Environmental pollution, waste disposal and treatment.

UNIT IV

Epidemiology and Data Science in Public Health:

Epidemiology and achievements in public health, Measurements in Epidemiology—Incidence and prevalence, Causation and association, and Measures of association.

Outline of study designs (including cross-sectional study design, case-control study design, cohort study design and randomized control trials); Introduction to confounding and bias; Screening tests- validity and reliability methods.

UNIT V

Management and Economic Sciences in Public Health:

Systems approach (input, process and outcome) in public health. Health management information system, Horizontal and vertical integration of public health interventions, Public-Private mix.

Understanding community, Community health related needs assessment, Community orientation and Community mobilization, Introduction to digital health.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Understand and enlist the scientific approaches in public health,

CO2 : Understand and apply the epidemiologic and biostatistical science in evidence synthesis,

CO3 : Understand and apply the environmental health science in public health practice,

CO4 : Understand and apply the social and behavioral science in public health practice,

CO5 : Understand and apply the health economic and health management principles in setting priority for resource allocation, and

CO6 : Understand and apply the health economic and health management principles in health system optimization.

Textbooks:

1. R Detal, Oxford Textbooks: of Global Public Health, Oxford, 7th Edition, 2021.
2. K Parks, Textbooks: of Preventive and Social Medicine, M/S Banarsidas Bhanot Publishers, . 26th Edition, 2021.

Reference Books:

2. Warriar S,. Information and Communication Technologies in Public Health A Sociological Study,CBS Publishers, 2020.
3. Baker JJ. Baker RW, Dworkin NR, Health Care Finance: Basic Tools for Non-financial Managers., Jones and Bartlett Publishers, Inc, 5th edition. 2017.
4. Ross TK, Practical Budgeting For Health Care: A Concise Guide, Jones and Bartlett Publishers, Inc, 2020.

Course Objective

The objective of this course is to orient the students to core scientific disciplines in public health practice.

Course Title	Optimization Techniques
Course Code (Credit)	MA10003 (L-T-P-Cr: 2-0-0-2)

Course Objective:

To familiarise the students with a few rudimentary and popular optimization techniques to enable them to solve resource-constrained real world problems.

Course Contents:

UNIT I

Linear Programming:

Mathematical foundations and basic definitions, Linear optimization: Formulation and graphical solution of linear programming problems, Simplex method, Duality.

UNIT II

Transportation:

General structure of a transportation problem, Finding initial basic feasible solution by North-West corner rule, Least-Cost method and Vogel's Approximation Method, and Testing for optimality.

UNIT III

Assignment Problem:

Hungarian assignment method, Unbalanced assignment problems, Restrictions in assignment, Travelling Salesman model.

Course outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Know the concept of Linear programming problem (LPP) and will able to formulate linear programming problem,
- CO2 : Understand the basic terminology and concepts of solving LPP,
- CO3 : Solve LPP by simplex method,
- CO4 : Know the concept of duality in Optimization technique,
- CO5 : Apply optimization technique to solve transportation problem, and
- CO6 : Solve assignment problem.

ENGINEERING ELECTIVE I

Course Title	Basic Civil Engineering
Course Code (Credit)	CE10001 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The course is designed to provide an overview of different aspects of civil engineering profession, namely, surveying, materials, structural, and geotechnical engineering, hydraulics and water resources, environmental engineering, and transportation engineering and their roles in the societal development.

Course Contents:

UNIT I

Introduction:

Role of civil engineers in designing, building, and maintaining infrastructure and improving quality of life, Specializations in the civil engineering and their specific roles.

UNIT II

Surveying:

Plans, maps, scales, divisions of surveying, classification of surveying, leveling, and advanced methods of surveying.

UNIT III

Construction Materials & Structural Engineering:

Different construction materials and their uses, structural analysis and design philosophy.

UNIT IV

Geotechnical Engineering:

Overview on origin of soil, engineering properties and their classification; Soil exploration; Foundations: Their importance and purpose; Factors to consider in foundation design and stability of slopes; and Improving site soils for foundation use.

UNIT V

Hydraulics & Water Resources Engineering:

Overview of fluid properties, open channel flow, surface and groundwater hydrology, and irrigation infrastructures.

UNIT VI

Environmental Engineering:

Types of waste water, Principles of wastewater management, Types of solid waste, and Principles of solid waste management.

UNIT VII

Transportation Engineering:

Classification of highways, Typical construction methods of roads, traffic surveys and their applications in traffic planning, Railways, Ports and Harbours

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Understand the importance and practical applications of different types of surveying,
- CO2 : Learn about the different construction materials and understand the philosophy of structural analysis and design,
- CO3 : Understand engineering behaviour of soil and types of foundations,
- CO4 :Understand different hydraulics, hydrological and water resources engineering applications,
- CO5 :Learn about the management strategies of wastewater and solid waste, and
- CO6 : Understand the basics of different types of highways, railways, ports and harbours.

Textbooks:

2. M. S. Palanichamy “Basic Civil Engineering”, Tata McGraw-Hill Publication.

Course Title	Basic Mechanical Engineering
Course Code (Credit)	ME10003 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The course is designed to give an overview of the fundamental aspects of mechanical engineering so that a student pursuing any branch of engineering will realize the possibilities that the branch of mechanical engineering offers.

Course Contents:

UNIT I

Concepts of Thermodynamics:

Systems, properties, state, and cycle, Thermodynamic equilibrium and quasi-static process, First law of thermodynamics for closed system, First law of thermodynamics for open/flow systems, Second law of thermodynamics, Kelvin Plank statement, Clausius statement, and Basic concept of entropy

UNIT II

Fluid Mechanics and Hydraulic Machines:

Introduction to fluids, Properties of fluids, Pressure variation with depth, Bernoulli's equation and its applications, and Introduction to hydraulic turbines and pumps.

UNIT III

Mechanics of Materials:

Stress, Strain, Stress-Strain diagrams for ductile and brittle materials, Elastic constants, Hooks Law, Factor of Safety, One-dimensional loading of members of varying cross sections.

UNIT IV

Power Transmission:

Gear, Belt, and Chain Drives, Shaft under varying loading conditions, Introduction to robots, Applications of robotics, Basic robot motions, Sensors and Actuators

UNIT V

Manufacturing Processes:

Introduction to engineering materials, Types and classification of materials, Properties of materials, Introduction to casting, forming, forging, rolling, extrusion and welding, Introduction to machine tools, NC, CNC, and 3-D Printing.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Understand the basic principles of thermodynamics,
- CO2 : Develop an understanding of fluid machines like turbine and pump,
- CO3 : Determine stress and strains in a component subject to a load,
- CO4 : Understand the working and design aspect of power drives,

CO5 : Recognize appropriate material for a particular engineering application, and

CO6 : Understand the fundamentals of manufacturing processes.

Textbooks:

1. P Kumar, Basic mechanical Engineering, Pearson Education, 2nd Edition, 2018

Reference Books:

1. J K Kittur and G D Gokak, Elements of Mechanical Engineering Willey, 1st Edition, 2015.
2. B Agrawal, C M Agrawal ,Basic Mechanical Engineering, Willey, 1st Edition, 2011.

Course Title	Basic Electrical Engineering
Course Code (Credit)	EE10002 (L-T-P-Cr: 2-0-0-2)

Course Objective

The course is designed to provide to the students a comprehensive overview of the basics of the electrical engineering discipline. In particular, the course includes fundamental aspects of DC, AC and magnetic circuit analysis, working principles and applications of machines, and safety measures used in various electrical apparatus and appliances.

Course Contents:

UNIT I

D. C. Circuits:

Kirchhoff's law, Source transformation, Star-delta transformation and equivalent resistance of the circuits, Mesh and Nodal analysis, Superposition theorem.

UNIT II

A.C. Circuits:

Peak, average, R.M.S. values of sinusoidal quantities, Peak factor, Form factor, Phase difference, Phasor representation, AC through R, L, C, AC Series Circuit (RL, RC, RLC), Three-phase AC circuits: Voltage, current and power in star and delta connections.

UNIT III

Electromagnetic Circuits:

Magnetizing Force, Reluctance, Permeance, Magnetic field, Magnetic permeability, Analogy between Electric Circuits and Magnetic Circuits. Series magnetic circuit, BH curve.

UNIT IV

Scope and Safety Measures:

Electrical Energy Scenario in India, Application of Transformer, Three-phase and single-phase induction Motors, Power ratings of air conditioners, PCs, laptops, printers, refrigerator, washing machine, different lamps, electricity tariff, calculation of electricity bill for domestic consumer.

UNIT V

Personal Safety Measures:

Electric Shock, Earthing and its types, Safety Precautions to avoid shock.

UNIT VI

Equipment Safety Measures:

Working principles of fuse and miniature circuit breaker (MCB), Residual Current Circuit Breaker (RCCB).

Course Outcomes

Upon completion of this course, the students will be able to:

CO1 : Analyze the concept of DC circuit,

CO2 : Understand the concepts of AC circuits,

CO3 : Analyze the three phase circuit,

CO4 : Interpret the behavior of magnetic circuits,

CO5 : Remember the principles and operation of electrical machines, and

CO6 : Know the concepts of electrical safety and protection systems.

ENGINEERING ELECTIVE II

Course Title	Elements Of Machine Learning
Course Code (Credit)	EE10001 (L-T-P-Cr: 2-0-0-2)

Course Objective:

Today, we have access to massive data which get generated through information and computer technology in our connected world. Most of these data lie unused and often overwhelm us due to their size and variety. The objective of this course is to introduce to the students to the field of learning from data, discovering data patterns, converting them into knowledge, and applying it to solve real-world problems.

Course Contents:

UNIT I

Introduction:

Importance and Applications of Machine Learning, Supervised, Unsupervised, Reinforcement Learning and Evolutionary Learning.

UNIT II

Data Analysis:

Measurement Scales and Data Types; Visualization, Pre-processing and Transformation of Data; Dimensionality Reduction; and Data (Dis)Similarity.

UNIT III

Unsupervised Learning:

K-means and Density-based, Clustering Methods.

UNIT IV

Supervised Learning:

K-Nearest Neighbour, Decision Tree by Qualitative and Quantitative (information Gain method); Evaluation by Confusion Matrix of Supervised Learning Methods.

UNIT V

Learning with Neural Networks:

Perceptron, Multi-layer Perceptron and, Error Backpropagation Learning.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Demonstrate fundamentals of machine learning,

CO2 : Identify data types, apply suitable processing and visualize using suitable methods,

CO3 : Describe Unsupervised Learning and apply clustering techniques,

CO4 : Describe Supervised Learning and apply classification techniques,

CO5 : Demonstrate perceptron and Multi-layer Perceptron models, and

CO6 : Apply machine learning techniques for real world requirement.

Course Title	Engineering Mechanics
Course Code (Credit)	ME10001 (L-T-P-Cr: 2-0-0-2)

Course Objective:

Engineering Mechanics is a specialized need-based extension of Applied Physics and uses the principles of Statics and Dynamics. The objective of this course is to build the foundational knowledge of the students which is required for the design of mechanical systems. In particular, the course will cover aspects of analysis of rigid body, frame and machine under the action of force system, and analysis of free body diagram of a system whether at rest or in motion

Course Contents:

UNIT I

Concurrent Forces in a Plane:

Introduction to Engineering Mechanics, Free-body diagrams, Composition and resolution of forces, Methods of moments. Friction: Concept of friction, Wedge friction.

UNIT II

Force Analysis of Plane Trusses:

Methods of joints, Method of Sections, Centroid: Parallel forces in a plane, Centroid of plane figures, Theorem of Pappus, and Centroid of composite plane figures.

UNIT III

Moment of Inertia:

Moment of Inertia of plane figures, Parallel axis theorem, Perpendicular axis theorem, and Moment of Intertia of composite figures.

UNIT IV

Principle of Virtual Work:

Equilibrium of Ideal Systems, Virtual work.

UNIT V

Dynamics of Particles:

Differential equations of rectilinear motion, Free vibration, D'Alembert's Principle, Momentum and Impulse, Work & Energy, Conservation of energy, Impact.

UNIT VI

Curvilinear Motion:

Normal and tangential acceleration, Motion of a projectile, Work and Energy in curvilinear motion.

UNIT VII

Rotation of a Rigid Body:

Kinematics of rotation, Rotation under the action of a constant moment.

Course outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Draw complete and correct free-body diagrams and write the appropriate equations from the free-body diagram,
- CO2 : Use scalar analytical techniques for analyzing forces and moments in mechanical systems,
- CO3 : Analyze forces in statically determinate structures such as trusses, frames and problems related to friction,
- CO4 : Determine the centroid and second moment of area,
- CO5 : Apply fundamental concepts of kinematics and kinetics of particles to the analysis of simple and practical problems, and
- CO6 : Solve real life problems by using mathematics, physical laws and theorems.

3. S. Rajasekaran and G. Sankarasubramanian Engineering Mechanics (Statics and Dynamics),Vikas publishing House, 3rd Edition, 2017

Course Title	Biomedical Engineering
Course Code (Credit)	EC10003 (L-T-P-Cr: 2-0-0-2)

Course Objective:

Biomedical Engineering is a multidisciplinary field that combines knowledge available in a wide range of disciplines such as engineering, medicine, and societal science. The course focuses on innovating newer equipment and technologies to improve human health and enhance health care facilities in a holistic manner.

Course Contents:

UNIT I

Introduction and Overview:

Introduction to biomedical engineering, Applications of biomedical engineering.

UNIT II

The Human Body:

Cell-structure and function, Tissue & organs, Bio-potentials, Action potential, Major human systems (musculoskeletal, circulatory, nervous, and respiratory system)

UNIT II

Bio-instrumentation:

Instruments in medical practice, Man-instrumentation system, Basic components, Linear network analysis, Bioelectric amplifier (OpAmp, isolation amplifier, instrumentation amplifier), Bio-instrumentation design, and Intelligent medical instrumentation.

UNIT III

Biomedical Electrodes and Sensors:

Signal acquisition, Bio-potential measurements, Active and passive sensors, and Electrodes for biophysical sensing (Ag-AgCl, surface electrodes, microelectrodes), transducers, sensors.

UNIT III

Biomedical Signals, Imaging and Informatics:

Bioelectric phenomena, Sources of biomedical signals, Origin of biopotentials, Basics of bio-signal processing, noise, Interference, Electrical safety issues, Principle of medical imaging techniques, such as X-ray, US, MRI, CT scan, and nuclear imaging, and Fundamentals of bio-informatics.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Apply knowledge of basic engineering and biology to solve the problems,
- CO2 : Knowledge of human body about cell, potential and organs of body,
- CO3 : Develop a thorough understanding on principles of bio-instrumentation,
- CO4 : Explain the role of bio-potential electrodes, and design of sensors,
- CO5 : Differentiate and analyse the biomedical signal sources, and
- CO6 : Knowledge about imaging techniques used in hospital.

Textbooks:

Course Title	Basic Instrumentation
Course Code (Credit)	EE10003 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The course is designed to impart, to the students, the principles of analog and digital measuring instruments which include the working mechanisms of sensors and transducers and their applications in industrial and biomedical systems.

Course Contents:

UNIT I

Analog and Digital Instruments:

Basics of measuring instruments, Types of analog instruments, Measurement of voltage, current, power and energy in single and three phase circuits; Digital Instruments: Digital voltmeter, Digital multimeter, Timer/counter, and Time, phase and frequency measurements in oscilloscope.

UNIT II

Sensors and Transducers:

Optical sources and detectors: LED, photo-diode, light dependent resistor; Basics of fiber optic sensing, IR Sensors. Resistive, capacitive, inductive, piezoelectric, and Hall effect sensors, Temperature transducers: Thermocouple, RTD , and thermistor.

UNIT III

Transducers in Industrial Applications:

Measurement of displacement (linear and angular), velocity, acceleration, force, torque, vibration, shock, pressure, flow, liquid level, pH, conductivity and viscosity.

UNIT IV:

Instruments in biomedical applications:

ECG, Blood Pressure measurement, CT Scan, and Sonography

Course Outcome:

Upon completion of this course, the students will be able to:

CO1 : Know the basics of measuring instruments,

CO2 : Measure different electrical quantities,

CO3 : Understand the working principles of optical and electrical transducers and sensors,

CO4 : Understand the working of electrical transducers and sensors,

CO5 : Apply the transducers in industrial applications, and

CO6 : Use instruments in biomedical applications.

HASS ELECTIVE I

Course Title	Society, Science And Technology
Course Code (Credit)	HS10013 (L-T-P-Cr: 2-0-0-2)

Course Objective:

There is a circular relationship between society, science, and technology. Society creates a need and an ambience to develop science and technology, and science and technology create means to meet societal needs and new opportunities to make human life better. Studying this relationship is the objective of this subject. The subject will expose, before the students, the

past developments of science and technology and the social forces that played a dominant role in making these developments possible and the way these were used in the society. The subject will also present the ethical principles that underlie the development and use of science and technology in the society.

Course Contents:

UNIT I

Introduction:

Human Curiosity to Know the Truth of Nature, Need to Improve Quality of Life, Emergence of Science and Technology, Characteristics of Society, Science, and Technology, and Impact of Science and Technology on the Society.

UNIT II

Scientific Discoveries:

Milestone Scientific Discoveries of the Past and the Ways They Impacted Human Thought Process and Culture; Scientific Method, Developing a Theory, and Making of a Discovery; Discoveries in the Physical, Biological, and Mathematical Sciences; Normal Science, Paradigms, Anomalies, Crisis and Emergence of Scientific Theories, and Scientific Revolutions.

UNIT III

Technological Developments:

Milestone Developments of Technologies and the Ways They Transformed the Society. Stories of Technological Developments such as Steam Engines, Electricity, Semiconductors, and IoT.

UNIT IV

Science and Technology in the Service of the Society

Contributions of Science and Technology to Solving Societal, Environmental, and Global Problems. Successes and Limitations, and Abuses and Control of Science and Technology; Ethical Considerations.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 :Understand the forces that shape the development of science and technology,
- CO2 :Understand the major milestones of scientific discoveries have impacted human thought processes,
- CO3 :Understand the effect of technological developments in societal transformation,
- CO4 : Analyse the contribution of Science and Technology in solving societal and Environmental problems,

CO5 : Evaluate the ethical issues related to abuse of science and technology, and

CO6 : Apply the skills learned to suggest solutions to global problems linked to science and Technology.

Course Title	Essentials Of Management
Course Code (Credit)	HS10202 (L-T-P-Cr: 2-0-0-2)

Course Objective:

This course explores the basic concepts and processes of management. Students will learn the importance of management in their professional life from the stories on the evolution and practices of management. Students will examine the fundamental roles and processes of planning, organizing, staffing, directing and controlling that comprise the managers' role. This course also examines the fundamentals of marketing and financial management for the success of the organization. This course will make an attempt to introduce students to the business environment and strategic management process to understand the nuances of business. Students will develop skills related to the manager's function as required in today's competitive environment.

Course Contents:

UNIT I

Evolution of Management Thoughts:

Concept, Scope and Significance of Management; Classical Approach; Scientific, Bureaucratic & Administrative theory of Management; Neo-classical and Modern Approach; Contribution of Management Practitioners

UNIT II

Functions of Management (Part I):

Nature, scope and significance of Planning; Types of Planning; Process of Planning; Barriers to effective planning; Decision making: concept, types and process; Organizing: concept and significance; Delegation of authority; Authority vs. Responsibility; Structure of Organization: departmentalization, Centralization vs. Decentralization

UNIT III

Functions of Management (Part II):

Concept of Staffing, Manpower planning and Job design; Recruitment and selection; Training and development; Performance Appraisal; Directing: Concept, Direction and Supervision; Controlling: Concept, Importance and levels; Process and types of controlling

UNIT IV

Marketing and Financial Management:

Marketing Mix (Product, place, price, Promotion); Market Segmentation; Introduction, scope, importance and functions of Financial management; Introduction to Financial statements: Profit and loss account; balance sheet

UNIT V

Business Environment and Strategic Management:

Business environment: concept, importance, elements; Types of business environment; Strategic Management: Concept, Importance and levels of strategy; Process of Strategic Management

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 :Learn different approaches, theories and stories of various practitioners of management and know how such knowledge could be applied to achieve goals of Organizations within the changing environment,
- CO2 : Understand the core functions of management in order to facilitate efficient and effective decision making both at individual and organizational level,

- CO3 : Identify the human resource requirement of the organization for achieving its objective effectively,
- CO4 : Synthesize various marketing and financial skills and techniques in order to be successful in corporate world,
- CO5 : Assess the business environment and understand the importance of various types of business environment for better decision making, and
- CO6 : Acquire the lesson learnt in strategic management process for strategic decision making by leveraging the core competencies of the organization.

Course Title	Shades Of Economics
Course Code (Credit)	HS10102 (L-T-P-Cr: 2-0-0-2)

Course Objective:

This course will provide technical students with knowledge in concepts of environmental economics, resource economics, and circular economy, allowing prosperity for present and future generations. The course will equip future engineers with skill to handle resources efficiently and effectively. Acquaint them with the contemporary trends in business settings and thereby innovate novel solutions to existing problems.

Course Contents:

UNIT I

Purple Economy: Economics of Glocalization:

Introduction to colours and world of economics (including White, Blue, Black, Green, Purple, Grey, Red, Pink, Silver); Concept and definition of purple economy; Cultural footprint; Local and global cultural economy; Culture and well being; Rethinking employment and training in the purple economy; Vocal for Local; Make in India.

UNIT II

Grey Economy: Economics of Informal Sector:

Concept and definition of grey economy; Introduction to formal and informal Sector; Formal and informal sector linkage; Labour absorption and dualism in economy; Theoretical and policy issues; Migration in informal sector.

UNIT III

Green Economy: Economics of Reduce, Reuse, and Recycle:

Concept and definition of green economy; Green investment and green bond; Green technology and renewable resources; Carbon footprint; Waste management.

UNIT IV

Blue Economy: Economics of Ocean Resources:

Concept and definition of blue economy; The marine environment; Fisheries and aquaculture; Tourism; Ocean-based renewable sources of energy; Transportation and the blue economy; Pollution of water resources; Water resource management.

UNIT V

Black Economy: Economics of Unsanctioned Sector:

Concept and definition of black money; Causes and consequences of black economy; Global black income generation; Extent of black money in India. Government measures to curb black money.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Understand the economic drivers that shape the future of India,
- CO2 : Understand sustainability issues related to usage of factor endowment,
- CO3 : Ability to create linkage between Economics, Science and Technology,
- CO4 : Apply knowledge, reasons and the need for regulating circular economy,
- CO5 : Assess and analyses scope for global market opportunities, and
- CO6 : Explore yet to be unearthed employment opportunities.

Course Title	Indian Economy Post Liberalisation
Course Code (Credit)	HS10123 (L- T- P-Cr: 2-0-0-2)

Course Objective:

Study of this course provides an extensive understanding of changing structure of Indian economy over time. This course targets to put emphasis on inclusive growth, reducing poverty, inequality and creating decent employment in the economy. This course will give an understanding about the issues faced by an economy in achieving sustainable development.

Course Contents:

UNIT I

Introduction and features:

Changing structure of the Indian economy Changing paradigms of Development Strategies and Economic Reforms.

UNIT II

Poverty, Inequality and Employment:

Various concepts and estimates of poverty; Income inequality; Problem of unemployment; Interface among growth, poverty and employment; Inclusive growth and Human Development; Sustainable Development Goals—Targets for reduction in Poverty, Inequality and Decent Employment.

UNIT III

Demographic Issues:

Demographic trends, size and structure of population; Health and Education; Skill challenges and demographic dividends; Sustainable Development Goals—Targets for Greater Wellbeing and Better Human Capital.

UNIT IV

Perspectives in Agriculture, Industry and Services:

Agricultural growth performance and food security; Growth, trends and changing pattern of Indian industries, industrial reforms and policies; Services in India's growth process; Sustainable Development Goals—Targets for Inclusive and Sustainable Growth.

UNIT V

External Sector and Issues in Indian Public Finance

Foreign trade and trade policy; fiscal devolution, Indian Union Budget and Tax System

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Interpret the changing structure of Indian economy,

CO2 : Perceive the issues and challenges faced by Indian economy,

CO3 : Evaluate the policies and programmes required to achieve inclusive growth,

CO4 : Realise the importance of human capital in triggering economic development,

CO5 : Comprehend the state and role of external sector in strengthening Indian economy, and

CO6 : Help in achieving sustainable development for the economy.

Course Title	Socio-Political Environment
Course Code (Credit)	SO10043 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The objective of this paper include providing basic knowledge on socio-political environment of India and to equip the students with an understanding of their roles, duties and responsibilities in a democratic set up.

Course Contents:**UNIT I****Social Problem in India:**

Meaning and Definition of Social Problems, Characteristics, Causes and Consequences, Problems of Poverty, Unemployment, Population growth, Problems of Women and Aged, Corruption and Nepotism, Illiteracy, Substance Abuse, and Terrorism.

UNIT II**Social Stratification:**

Equity and Equality, Caste, Religion, Class, Gender Discrimination, Urban Slums.

UNIT III**Political Institutions:**

Meaning and Basic Concepts of Political Institutions: Legislative, Executive and Judiciary Systems of the Indian Constitution.

UNIT IV**Fundamental Rights and Duties:**

Fundamental Rights and Duties in Indian Constitution, Directive Principles of State Policy.

UNIT V**Contemporary Changes in Political Institutions:**

Changing Role of the Government in Contemporary India, Role of Government in the Formation of National and International Policies and Their Impact on Business and Trade.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Understand contemporary Indian social problems,
- CO2 : Understand the roles and functions of the three political institutions in our democraticup,
- CO3 : Familiarize the students with the Rights and Duties enlisted in the Indian Constitution,
- CO4 : Grasp the interrelationships among political, social and economic issue,
- CO5 : Visualize contemporary changes in Political Institutions, and
- CO 6: Realize the importance of equity, equality, and dignity in a democratic system.

Course Title	Thinking Perspectives
Course Code (Credit)	PS10043 (L-T-P-Cr: 2-0-0-2)

Course Objective:

Cognition plays a significant role in accumulation and processing of information. This subject provides an in-depth understanding of some of the cognitive processes in terms of current theories, models and applications. It helps learners to understand the importance of these cognitive processes and the rationale behind cognition, problem solving, critical thinking, and scientific thinking. It facilitates students to identify and analyze the key conceptual and theoretical frameworks underpinning cognitive process.

Course Contents:

UNIT I

Basics of Cognition:

A Brief History, Emergence of Modern Cognitive Approach, Thinking, Basic Elements of Thought: Forming Concepts, Propositions, Images. Reasoning, some Basics sources of error, Information-processing approach, connectionist approach, evolutionary approach, ecological approach.

UNIT II

Memory Processes and Critical Thinking:

Organization of Long Term Memory, Forgetting, Retrieval and Metamemory; Proactive and Retroactive inference; Amnesia and Retrieval, Flashbulb Memory, Eyewitness Memory, Traumatic Memory, False Memories.

Phases of Critical Thinking: Intellectualization, Suggestion, Hypothesis, Reasoning, and Testing, Critical Thinking Abilities: Thinking, Observational, and Questioning and Dispositions, Critical Thinking Skills: Analysis, Communication, Creativity, Problem-solving Skills, and Open-mindedness.

UNIT III

Systems Thinking and Scientific Thinking:

System Definition and Characteristics, Approaches to System Modelling, Causal-Loop Diagramming, System Archetypes, Micro world and Learning Laboratory, The Learning Organization and the Fifth Discipline, Systems Thinking Study, Examples.

Characteristics of Science: Systematic observation and experimentation, Inductive and deductive reasoning, Lessons from Scientific Thinking: Empirical Evidence, Logical Reasoning.

UNIT IV

Creativity and Designing Thinking:

Creative Thinking, Stages in Creative Thinking, Nature of Creative Thinking, Features of Creativity—Novelty, Originality and Usefulness, Guilford's Measure of Creativity—Fluency, Flexibility, and Originality, Barriers to Creativity, Enhancing Individual and Organizational Creativity.

Designing Thinking as a Process of Problem Solving: Defining Problems, Challenging Assumptions, Developing Concepts, identifying Alternative Strategies and Solutions, Prototyping, and Experimenting Problem Solving through Innovative Solutions, Stages of Design Thinking—[Empathize](#), Define, Ideate, Prototype and Test.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Understand the definition and scope of cognition, problem solving, and creativity,
- CO2 : Understand the theories related to cognition, decision making, and critical thinking,
- CO3 : Understand the classic and current experimental research in cognitive processes,
- CO4 : Develop skills essential in designing and conducting experiments in cognition, reasoning, and problem solving,
- CO5 : Understand various aspects of critical thinking, scientific thinking, and design thinking process, and
- CO6 : Apply the knowledge of cognitive processes to one's own personal life and to real life issues.

Course Title	Creativity, Innovation And Entrepreneurship
Course Code (Credit)	PS10045 (L-T-P-Cr: 2-0-0-2)

Course Objective:

The course is designed for students who want to enhance their creative and innovative skills and apply them to prepare business plans to form entrepreneurial enterprises. More specifically, the course is designed to help students to stimulate creativity in themselves and learn the impact of innovation on growth creation and design thinking in real-world business situations. In this course, the concepts of entrepreneurship and the environment in which the entrepreneurs act will be developed along with business plans and business models for start-ups.

Course Contents:

UNIT I

Introduction:

Definitions, Importance, and Relationships among Creativity, Innovation, and Entrepreneurship; Examples.

UNIT II

Creativity:

Definitions, Importance, and Relationships among Creativity, Innovation, and Entrepreneurship; Examples, Creative Thinking and Stages of Creative Thinking, Barriers to Creativity, Enhancing Individual Creativity, Guilford’s Usual Unusual Test, Psychometric Approaches to Tests of Creativity,

Structured tools of Creativity (Developing Creative Focus, Exercising Mind, Setting Directions, Suspending Rules, Thinking Differently, Establishing Formatted Work Space, Stimulating Mechanisms, Utilizing Experiences.

UNIT III

Innovation:

Innovation, Benefits, Keys to Successful Innovations, Types of Innovation, Barriers to Innovation, Methods of Generating Ideas, Design Thinking, Creative Problem Solving, and Measures of Innovation.

UNIT IV

Entrepreneurship:

Entrepreneur, Functions of an Entrepreneur, Types of Entrepreneur, Intrapreneur, Social Entrepreneur, Case Study on the Entrepreneurial Excellence of N. R. Narayan Murthy, Introduction to Agricultural, Rural, Tourism, Social and Digital Entrepreneurship, Entrepreneurial Motivational Behavior (Creativity, Self-Efficacy, Locus of Control, Risk Taking, Leadership, Communication), Converting Ideas into Products/Services with Differentiating Features, Niche Market, Design of the Products/Services, Bootstrap Marketing, Formulation of Business Plan, Business Model, Financial Planning, and Sources of Finance.

Practical classes will be devoted to organizing practicing sessions on creativity, case study discussion sessions and market analysis sessions on generating novel ideas, and developing and presenting business plans. Students, in groups, will design a new product/service, do a bootstrap market study, develop a business plan, and make an elevator pitch.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Understand the key elements of creativity and innovation,

CO2 : Visualize the impact of innovation on growth creation,

CO3 : Apply creative and design thinking to real-world business situations,

CO4 : Create a foundation of entrepreneurship development and its theories,

CO5 : Develop business plans and business models to start entrepreneurial enterprises, and

CO6 : Analyze the business plan and implement it in real field.

Textbooks:

Course Title	Community/Environment-Based Projects
Course Code (Credit)	EX17001 (L-T-P-Cr: 0-0-4-2)

Course Objective:

This course is offered to give the students an opportunity to connect with the community and the environment, learn and prioritize their problems, and define the problems in ways that make them amenable to scientific analysis and pragmatic solution. Appreciating the community problems, visualizing and experiencing them in person, self-learning, applying to realities, searching for and finding implementable solutions are the primary benefits of this project-based subject.

Course Outcomes:

Upon completion of this course, the students will be able to

- CO1 : Identify need of the community,
- CO2 : Formulate objective of a project,
- CO3 : Communicate orally and through formal technical write-ups,
- CO4 : Analyze and interpret data wherever essential,
- CO5 : Provide an implementable solution to the problem, and
- CO6 : Work in team following ethical manners.

The projects will be applied to problems uppermost in the minds of the community regarding the problems that they confront regularly. The problems may range from social inequality and social justice to lack of common services such as health, education, water, power, banking, and from lack of access to government subsidies and policies to deforestation and environmental problems.

5.	CS28001	Vocational Electives		1
Total				19

PROFESIONAL ELECTIVE COURSES (PE)

Sl. No	Course Code	Course Title	Pre-requisites	Credits
Professional Elective -I				
1.	CS30002	Artificial Intelligence	CS30001	3
2.	CS30025	Modeling and Simulation	-	3
3.	CS3005	High Performance Computing	CS21002	3

4.	CS30015	Image Processing and Applications	MA21002	3
Professional Elective -II				
1.	CS31002	Machine Learning	-	3
2.	CS30009	Distributed Operating Systems	CS20002	3
3.	EC30005	VLSI CIRCUITS & SYSTEMS	EC21001/ EC20005	3
4.	CS30011	Computational Intelligence	-	3

Professional Elective -III				
1.	CS30013	Data Mining and Data Warehousing	CS20006	3
2.	CS30027	Robotics and Applications	-	3
3.	EC30024	Embedded Systems	CS21002	3
4.	CS40006	Agile Software Development	-	3
Professional Elective -IV/ Research Elective-I				
1.	CS40001	Deep Learning Techniques	CS31002	3
2.	CS40005	Human Computer Interaction	CS30002	3
3.	CS40007	Computer Graphics and Multimedia Systems	MA21002	3
4.	CS30026	Computer Vision	CS40007	3
5.	CS30004	Data Science and Analytics	-	
Professional Elective -V/ Research Elective-II				
1.	CS40003	Software Testing and Automation	CS31001	3
2.	CS40002	Nature Inspired Computing	-	3
3.	CS40010	Augmented and Virtual Reality	CS30015	3
4.	CS40008	Social Network Analysis	MA21002	3

Sl. No.	Specialization	Elective	Course Name
1.	Human Robot Interaction	Elective-III	Robotics and Applications
		Elective-IV	Human Computer Interaction
		Elective-V	Augmented and Virtual Reality

VOCATIONAL ELECTIVE COURSES OFFERED BY DIFFERENT SCHOOLS

Vocational courses offered by School of Computer Engineering		
Sl. No.	Course Code	Course Title
1.	CS28001	Web Design
Vocational courses offered by School of Civil Engineering		
1	CE28001	Building Drawing, Estimation & Costing (for Civil Engineering Students)
2	CE28003	GIS & GPS Applications (For other branch students)
Vocational courses offered by School of Electrical Engineering		
1	EE28011	Industrial wiring and control panel design
2	EE28013	Installation, operation and maintenance of solar power system
3	EE28015	Domestic wiring and home automation
4	EE28017	Cyber physics application in industrial IOT
5	EE28019	Industrial Control and Remote Monitoring
Vocational courses offered by School of Electronics Engineering		
1.	EC28001	Computational Photography
2.	EC28003	Sound Engineering
3.	EC28005	Sensors for Automation
4.	EC28007	PCB Design
Vocational courses offered by School of Mechanical Engineering		
1	ME28011	Additive Manufacturing(3-D Printing)
2	ME28013	Die development by CNC milling
3	ME28015	Concept Car Manufacturing
4	ME28017	Development of Autonomous Wheeled Robots
5	ME28019	Modelling of Micro-Wind turbine by 3D CAD Design

Open Elective/Minor in Computer Science offered by School of Computer Engineering

Semester VI/ VII/VIII	
Course Code	Open Elective Course Title
CS30001	Design and Analysis of Algorithms
CS30018	Software Engineering Fundamentals

CS30020	Essentials of Computer Science
CS30022	Object Oriented Programming
CS30024	Fundamentals of Data Structures
CS30011	Computational Intelligence
CS40002	Nature Inspired Computing

- **Courses can be offered as open elective/minor**

Minor Lab (Students pursuing 4 years B.Tech. Hons or B.Tech. Research program along with Minor program)

Course Code	Course Title
CS39008	Computing Laboratory

Note:

- Students pursuing the 4-year B.Tech. (Hons.) or the 4-year B.Tech. (Res.) program must opt for three semester-wise Open elective courses, one in each of Semester VI, Semester VII, and Semester VIII.
- Not all subjects listed above may be offered in a semester.
- Allocation of courses to the students will be based on a first-come first-serve basis.
- A student with a CGPA of 7.5 after Semester IV must select three additional theory courses and one laboratory course, in Semester VII and Semester VIII to earn a Minor (See Rules for Minor).
- The courses that lead to a particular Minor are marked above with a cross (X).

Open Elective Courses Offered by Non Engineering Schools for the Students of School of Computer Engineering

SCHOOL OF APPLIED SCIENCES

Detailed Syllabus

Course Title	Probability and Statistics
Course Code (Credit)	MA21001 (L-T-P-Cr: 3-1-0-4)

Course Objectives:

The objective of this course is to familiarize the students with the foundation of probability and statistics and to use it in solving the problems arises in engineering and real life applications.

Course Contents:

UNIT I

Probability and random variables:

Basic concepts of sample space, events(with example), Axiom of Probability, Conditional Probability, Bayes' Theorem and its applications. Discrete random variable, probability mass function, cumulative distribution function and Moment Generating function for discrete random variable, some special

distributions like Uniform distribution, Geometric distribution, Binomial distribution, Negative Binomial distribution, Poisson distribution, Hypergeometric distribution, mean and variance. Continuous random variable, density function, cumulative distribution function and Moment Generating function. Uniform distribution, normal distribution, mean, variance, percentile and critical value of normal distribution, normal approximation of the binomial distribution and exponential distribution.

UNIT II

Joint probability and distributions:

Joint probability mass function and marginal probability mass function, joint probability density function and marginal probability density function, concept of independent random variable (joint probability), conditional probability mass function and conditional probability density function. Expected value, covariance and correlation for jointly distributed random variable (both continuous and discrete).

UNIT III

Descriptive Statistics:

Frequency distribution, pictorial and tabular representation of data, stem and leaf display, dot plots, histogram, box plots and comparative box plots. Basic concepts on mean, median and mode, Skewness, Kurtosis, Correlation, Coefficient of Correlation, rank correlation, Regression Analysis: Least square method.

UNIT IV

Inferential statistics:

Population, sample, random sample, sampling distribution, distribution of sample mean, central limit theorem, point estimator, point estimation of parameter using method of maximum likelihood estimation, confidence interval, confidence interval for the mean of a normal population with known and unknown variance, confidence interval for the variance of a normal population, hypothesis testing, one sided and two sided alternatives, Tests for mean of the normal distribution with known variance, Tests for mean of the normal distribution with unknown variance, tests for variance of the normal distribution.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Understand basic probability and its applications

CO2: Study probability distributions and can use it in real life data analysis

- CO3: Have a knowledge on univariate and bivariate distributions and their properties
- CO4: Measure the central tendency and dispersion of a data set to draw conclusion from the data and interpret the data with the appropriate pictorial representation.
- CO5: Have good understanding of the Central Limit Theorem and its applications
- CO6: Analyze the statistical inference

Textbooks:

1. Probability and Statistics for Engineers and Sciences by J. L. Devore, CENGAGE Learning, 9th Edition.
2. Advanced Engineering Mathematics by Erwin Kreyszig, Wiley, INC, 10th Edition.

Reference Books:

1. Introduction to Probability and Statistics for Engineers and Scientists by S.M. Ross, Elsevier/AP, 6th Edition.
2. Introduction to Probability and Statistics by J.S. Milton & J.C. Arnold, McGraw Hill, 4th Edition.
3. Introduction to Probability Theory and Statistical Inference by H.J. Larson, John Wiley & Sons Inc, 3rd Edition.
4. Fundamental of Mathematical Statistics by S.C. Gupta & V.K.Kapoor, S. Chand, 12th Edition.

Course Title	Discrete Structures
Course Code (Credit)	MA21002 (L-T-P-Cr: 3-1-0-4)

Course Objectives:

The main objective of this course is to provide mathematical concepts and build up strong mathematical fundamentals to support many subjects of computer science engineering such as design and analysis of algorithms, computability theory, software engineering, computer systems, syntactical analysis, information organization and retrieval, switching theory, computer representation of discrete structures and programming languages etc.

Course Contents:

UNIT I

Logic:

Proposition, Truth values, Connectives, Logical equivalence of composite statement (using truth table & without truth table), Predicates and Quantifiers, Rules of Inference, Methods of Induction.

UNIT II

Set, Relation & Function:

Set, Operations on set, Principles of Inclusion and Exclusion, Relation, Types of relations, Properties on Binary Relation, Equivalence relation, partial ordering relation, Hasse diagram, Lattice, Definition of function, Injection, Bijection, Surjection, Permutation function.

UNIT III

Recurrence Relation and their solutions:

Principles of counting, Discrete numeric function and their manipulation, Generating Function, Concept of Recurrence Relation with constant coefficients, Solution of Recurrence Relations (Substitution and generating function methods).

UNIT IV

Groups and Rings:

Concept of binary operations, Algebraic structures, Semigroup, monoid, Group, Abelian group with examples. Properties of groups, Cyclic groups and its generator, Sub group, cosets, Normal subgroup, Lagrange's Theorem, Homomorphism and Isomorphism, ring, field, Integral domain (Definition with examples)

UNIT V

Graph Theory:

Basic Terminology, Adjacency & Incident Matrix, graph Isomorphic Test, Paths, Circuit, Eulerian path and Eulerian Circuit, Hamiltonian path and circuit, shortest path Algorithms (Dijkstra), Tree, Rooted Tree, Binary Tree, spanning tree, Minimal Spanning Tree (MST) Algorithms (Prim's & Kruskal's Algorithms), Planar and Nonplanar Graphs.

Course Outcomes:

Upon completion of the course, the students will be able to:

- CO1. Convert sentences in natural language into mathematical statements and understand predicate and quantifiers, rules of inference and prove results by principle of mathematical induction.
- CO2. Understand the principles of inclusion and exclusion of sets, concept of relations and functions and solve related problems.
- CO3. Know the concepts of partition of sets, partial ordering relation, Hasse diagram and Lattice.
- CO4. Solve problems on recurrence relations by substitution and method of generating functions and know a powerful method of counting
- CO5. Understand the concept of algebraic structures, groups, semi group, subgroups and Lagrange theorem. Gets the idea of homomorphism and

isomorphism of groups, definition and examples of ring, integral domain and field.

CO6. Apply Graph theory in related areas like Syntactic analysis, Fault detection and diagnosis in computers, Scheduling problems and Minimal-path problems, network flow problems.

Textbooks:

1. Discrete Mathematics and its Applications by Kenneth H Rosen (Mc Graw Hill 7th Edition)

Reference Books:

1. Elements of Discrete Mathematics. A Computer oriented approach by C.L Liu, D.P. Mohapatra (Tata Mc Graw Hill 4th Edition-2013)
2. Discrete Mathematics by Sudarsan Nanda, Allied Publisher Pvt. Ltd., 2022
3. Introduction to Graph Theory by Douglas B. West, Pearson, 2nd Edition, 2002
4. Discrete Mathematics by Iyeger et al., Vikas Publishing House Pvt.Ltd., 2020

Course Title	Data Structures
Course Code (Credit)	CS21001 (L-T-P-Cr: 3-1-0-4)

Course Objectives:

- To find the Time Complexity and Space Complexity for algorithm
- To understand the various techniques of sorting and searching
- To design and implement arrays, stacks, queues, and linked lists
- To understand the complex data structures such as trees and graphs
- To solve real life problems

Course Contents:

UNIT I

Introduction:

Development of Algorithms, Notations and analysis, Storage structures for arrays, Sparse matrices, Stacks and Queues: Representations and applications.

UNIT II

Linked List, Stacks, and Queues:

Linked Lists, Linked stacks and queues, Operations on polynomials, Doubly linked lists, Circularly linked lists, Dynamic storage management, Garbage collection and compaction.

UNIT III

Trees:

Tree representation, Binary Trees, Binary search trees, Tree traversal, Expression manipulation, Symbol table construction, Height balanced trees, AVL trees.

UNIT IV**Graphs:**

Graphs, Representation of graphs, BFS, DFS, Topological sort, String representation and manipulations, Pattern matching.

UNIT V**Sorting and Searching:**

Sorting Techniques: Selection, Bubble, Insertion, Merge, Heap, Quick, Radix sort, Linear search, Binary search, Hash table methods.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Use the concepts of data structure, data type and abstract data type to develop solutions for engineering problems.

CO2: Develop programs to implement linear data structures such as stacks, queues, linked lists, etc.

CO3: Apply the concept of trees and graph data structures in real world scenarios

CO4: Comprehend the implementation of sorting and searching algorithms

CO5: Compare Time Complexity and Space Complexity for algorithm

CO6: Effectively choose the data structure that efficiently models the information in a problem.

Textbooks:

1. Fundamentals of Data Structures in C by E. Horowitz, S. Sahani and S. Anderson-Freed, Universities Press.

Reference Book:

1. Sartaj Sahni, "Data Structures, Algorithms and Applications in C++", Universities Press Pvt. Ltd., 2008.

Course Title	Digital Systems Design
Course Code (Credit)	EC20005 (L-T-P-Cr: 3-0-03)
Pre-requisites	EC10001

Course Objectives:

- To understand the overview on the design principles of digital computing systems

- To learn the Verilog modelling techniques
- To learn Boolean Algebra and Understand the various logic gates
- To be familiar with various combinational circuits
- To be familiar with designing synchronous and asynchronous sequential circuits
- To be exposed to CMOS level gate design

Course Contents:

UNIT I

Basic VLSI System Design:

Introduction to digital systems and VLSI design, Moore's Law, VLSI Design flow, Design hierarchy, Introduction to Verilog HDL, operators and Modelling techniques (gate-level, data-flow, and behavioral)

UNIT II

Binary Codes & Boolean Algebra:

Signed Binary numbers and its arithmetic (1's and 2's complement form), Binary codes (Weighted and non-weighted codes, Gray codes, BCD codes), Boolean Algebra-Laws and Axioms, SOP and POS (Min-term and Max-term), K-Maps (2-,3-,4- variables with don't care condition)

UNIT III

Combinational Circuits:

Adders (Half adder, Full adders, Binary Parallel Adders), Subtractor (Half Subtractor, Full Subtractor), Code conversion algorithms, Combined Adder-Subtractor Block, Design of code converters, Decoders and Encoders, Multiplexer and Demultiplexer. Implementation of Combinational Circuits using Gate-level and Data-flow level of modelling.

UNIT IV

Sequential Circuits:

Basic latch, Flip-flops (SR, D, JK, T, Master-Slave), Triggering of flip-flops, FF conversions, Shift Registers (SISO, SIPO, PISO, PIPO), Counter Design (Synchronous and Asynchronous), Implementation of sequential circuits using Behavioral level of modelling.

UNIT V

Advanced Concepts:

Overview of CMOS, CMOS level gate design (Basic and Universal gates), Design of general Boolean circuits using CMOS gates, CMOS level design of latches and flip-flops. Verilog description of CMOS level design.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Demonstrate the design principles of digital electronic and VLSI systems
- CO2: Apply the concept of different Verilog HDL models in realising various digital circuits
- CO3: Evaluate and simplify Boolean functions by using Boolean algebraic methods like K-maps
- CO4: Design and analyse different combinational circuits
- CO5: Design and analyse different sequential circuits
- CO6: Design and analyse CMOS-based combinational and sequential logic circuits

Text Books

1. Morris Mano, and Michael D. Ciletti, "Digital Design", Fifth Edition, PHI, 2012.
2. CMOS Digital Integrated Circuits – Sung-Mo Kang, Y. Leblebici, C. Kim, TMH, 4th Edition, 2016

Reference Books

1. Anand Kumar, "Fundamentals of Digital Logic", Fourth Edition, PHI, 2016.
2. Samir Palnitkar, "Verilog HDL", Second Edition, Pearson Education, 2003.

Course Title	Object Oriented Programming using Java
Course Code (Credit)	CS20004 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To understand the basic concepts of Object-Oriented Programming
- To nurture syntax and semantics of Java Programming language
- To write java programmes using basic concepts of OOP principles
- To be able to know multi tasking Java and multithreading techniques
- To understand Packages, Interfaces, and Exception Handling

Course Contents:

Unit I

Evolution of Programming Paradigm:

Procedure oriented programming vs Objects oriented programming, Object oriented programming concepts: Object, Classes, Encapsulation and abstraction, Inheritance, Polymorphism

Unit II

Java Overview:

JDK, JRE, Java Virtual Machine, Byte code, Java Characteristics, Data types, Operators, Control statements, Class fundamentals, Objects, Methods, Parameterized method, Use of static keyword, Input stream reader, Scanner class, Command Line Argument, Constructors, Overloading, Array

Unit III

Inheritance:

Basics of Inheritance, Use of super and final keywords, Method overriding, Abstract classes, Dynamic Method Dispatch, Defining and importing packages, Access protection, Interfaces, Inner class

Exception handling: Exception fundamentals, Types, Understanding different keywords (try, catch, finally, throw, throws), User defined exception handling;

String Handling: Basics of String handling, String class, String Buffer class, constructor and methods of both classes

Unit IV

Multithreading:

Basic thread concept, Life cycle of thread, Thread Model, Thread Priorities, Synchronization, Thread Class and Runnable Interface, Inter Thread Communication.

Input/Output:

Stream classes, Byte stream, Character stream, Reading and writing from console, Files, Reading and writing onto file using Byte stream and character stream, Random Access File

Unit V

GUI Programming:

Introduction to Swing, Swing controls, Event handling: Delegation event model, Event classes, Sources, Listeners, Adapter class.

JDBC: JDBC API, Comparison between JDBC & ODBC, Type of JDBC Drivers, JDBC Architecture, JDBC classes and interfaces, Basic steps in Developing JDBC Applications, Working with DataBase, Result Set, Statement & Prepared Statement interfaces, Result Set MetaData

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Examine the basic concepts of Object-Oriented Programming

CO2: Perceive syntax and semantics of Java Programming language

CO3: Design Java application programs using basic concepts of OOP principles, abstract classes, interfaces and packages

CO4: Develop robust and multi tasking Java programs using exception handling and multithreading techniques

CO5: Design java programs using string classes and I/O operations,.

CO6: Design GUI applications using Swing and interactive application using event handling and java database connectivity.

Textbooks:

1. Herbert Schildt, “Java-The Complete Reference”, Twelfth Edition, McGraw Hill Education, 2021

Reference Books:

1. Herbert Schildt, “Java-The Complete Reference”, Twelfth Edition, McGraw Hill Education, 2021
2. Y. Daniel Liang, “Introduction to JAVA Programming”, Tenth Edition, Pearson Education, 2019

Course Title	Computer Organization and Architecture
Course Code (Credit)	CS21002 (L-T-P-Cr: 3-1-0-4)

Course Objectives:

- To understand the basic hardware and software issues of computer organization
- To understand how computations are performed at machine level
- To understand how data storage is happening at machine level
- To understand the memory hierarchies, cache memories and virtual memories
- To learn the different ways of communication with I/O devices

Course Contents:

UNIT I

Basic Structure of Computers:

Computer Types, Functional Units, Basic Operational Concepts, Bus Structures, Machine Instructions and Programs: Memory Locations and Addresses, Memory Operations, Encoding of Machine Instructions, Addressing Modes, Instruction Types, Instruction Format, Instruction Length, Assembly Language, Subroutines, Additional Instructions, RISC vs CISC.

UNIT II

Basic Processing Unit:

Fundamental Concepts, Execution of a Complete Instruction, Single and Multiple Bus CPU Organization, Hard-wired Control, Micro programmed Control unit.

UNIT III**Memory System:**

Basic Concepts, Semiconductor RAM Memories, Read Only Memories, Speed, Size, and Cost, memory module design, Memory Hierarchy, Cache Memories, Mapping Functions, Replacement Algorithms, Memory Performance Considerations, Memory interleaving, Virtual Memories.

UNIT IV**Arithmetic:**

Design of fast adders, Multiplication of Positive Numbers, Signed Operand Multiplication, Fast Multiplication, Integer Division, Floating-point Numbers and Operations.

UNIT V**Input/ Output Organization:**

Accessing I/O Devices, Modes of I/O Transfer, Program Controlled I/O, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Controlling Device Requests, Exceptions, Direct Memory Access.

UNIT VI**Case Study:**

IA-32 Register Structure, IA-32 Addressing Modes, IA-32 Instructions, Machine Instruction Format, IA-32 Assembly Language, Program Flow Control, Logic and Shift/Rotate Instructions, Subroutines for IA-32, Programming examples.

Course Outcome:

Upon completion of this course, the students will be able to:

- CO1: Perceive the functions of hardware components of computer and its requirements for the execution of instructions.
- CO2: Choose Instruction Set Architecture (ISA): Instruction format, types, and various addressing modes.
- CO3: Apply the basic components to design the CPU: the ALU and control unit.
- CO4: Assess the different levels of memory organization: SRAM, DRAM, Cache memory, Virtual Memory.
- CO5: Design the ALU and its operations: Addition, Subtraction, Multiplication, and Division.

CO6: Classify and compare the I/O Organization and types of I/O Transfer.

Textbooks:

1. Computer Organization and Embedded Systems by Carl Hamacher, Zvonko Vranesic, Safwat Zaky, 6th Edition, MGH, 2022.

Reference Books:

1. M. Morris Mano, Computer System Architecture, Pearson Education India, 3rd Edition
2. William Stallings, Computer Organization & Architecture, 11th Edition, Pearson Education, 2006.

Course Title	Database Management Systems
Course Code (Credit)	CS20006 (L-T-P-Cr: 3-1-0-3)

Course Objectives

- To learn data models, conceptualize and depict a database system using ER diagram
- To understand the internal storage structures in a physical DB design
- To know the fundamental concepts of transaction processing techniques
- To understand the concept of Database Design in Normalization techniques
- To know the manipulation of SQL Queries

Course Contents:

UNIT I

Introduction:

Purpose of Database System, Views of data, Data Models, Database Languages, Database System Architecture, Components of DBMS, Entity, Relationship model (E-R model), E-R Diagram notation, EER notations, Examples.

UNIT II

Relational Model:

Relational Data Model, Concept of relations, Schema-instance distinction, keys, integrity rules, Relational algebra operators, SQL: Data definition, Data manipulation, Aggregate function, Null Values, Nested sub queries, Joined relations.

UNIT III

Database Design:

Dependencies and Normal forms, Dependency theory, Functional dependencies, Armstrong's axioms for FD's, Closure of a set of FD's, minimal covers, Definitions of 1NF, 2NF, 3NF and BCNF, 4NF, 5NF, Decompositions and desirable properties of them.

UNIT IV

Transaction Management:

ACID properties, Serializability and concurrency control, Lock based concurrency control (2PL), Timestamp ordering protocol, Database recovery management.

UNIT V

Implementation Techniques:

Overview of Physical Storage Media, Magnetic Disks, RAID, Tertiary storage, Organization of Records in Files, Indexing and Hashing, Ordered Indices, primary, Secondary index structures.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Install, configure, and interact with a relational database management system
- CO2: Conceptualize and depict a database system using ER diagram.
- CO3: Master the basics of SQL and construct queries using SQL
- CO4: Design and develop a large database with optimal query processing
- CO5: Develop efficient storage scheme of saving and retrieving Records and Files
- CO6: Design the database with normalization techniques

Textbooks:

1. Silberschatz, Henry F. Korth, S. Sudharshan, "Database System Concepts", Seventh Edition, McGraw Hill, 2006.
2. C. J. Date, A. Kannan, S. Swamynathan, "An Introduction to Database Systems", Eighth Edition, Pearson Education, 2006.

Reference Books:

1. Ramez Elmasri, Shamkant B. Navathe, "Fundamentals of Database Systems", Seventh Edition, Pearson, 2007.

Course Title	Operating Systems
Course Code (Credit)	CS20002 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To provide knowledge about the services rendered by operating systems
- To explore the various scheduling policies and to provide solutions for critical section and deadlock problems
- To provide a detailed discussion of the various memory management techniques
- To discuss the various file-system design and implementation issues

- To discuss how the protection domains, help to achieve security in a system
- To explore the design and implementation issues of Distributed OS

Course Contents:

UNIT I

Introduction:

Need for Operating Systems, Computer Systems, OS Operations, Abstract view of OS, Virtualization, Computing Environments, OS Services, OS Structures, System Calls, Building and Booting OS, Process, Threads, Multithreading.

UNIT II

Process Management:

Process Scheduling, Process Co-ordination, Synchronization, Semaphores, Monitors, Hardware Synchronization, Deadlocks, Methods for Handling Deadlocks.

UNIT III

Memory Management:

Memory Management Strategies, Contiguous and Non-Contiguous allocation, Virtual memory Management, Demand Paging, Page Placement and Replacement Policies.

UNIT IV

File Management:

File System, Basic concepts, File System design and Implementation, Case Study: Linux File Systems, Mass Storage Structure, Disk Scheduling, Disk Management, I/O Systems, System Protection and Security.

UNIT V

Distributed Systems:

Distributed Systems, Distributed operating systems, Distributed file systems, Distributed Synchronization, OS architecture, Case study on LINUX and Windows OS.

Course Outcomes:

Upon completion of the course, the students will be able to:

CO1: Distinguish between different types of modern operating systems, virtual machines

CO2: Comprehend the techniques used to implement the process manager

CO3: Comprehend virtual memory abstractions in operating systems

CO4: Design and develop file system and I/O system

CO5: Apply various mechanisms in storage management

CO6: Design and develop OS modules for Distributed Environment

Textbooks:

1. Silberschatz, Galvin, Gagne, "Operating System Concepts", Tenth Edition, Wiley, 2018.

Reference Books:

1. William Stallings, "Operating Systems: Internals and Design Principles", Ninth Edition, Pearson Publication.
2. Andrew S. Tanenbaum and Herbert Bos, "Modern Operating Systems", Fourth Edition, Pearson Publication.

Course Title	Principle of Signals & Systems
Course Code (Credit)	EC20006 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This course will begin with an introduction to analog and digital signal processing, then elaborates on various transformation techniques to signals, and finally presents an idea about actual implementations of these methods in today's hardware and software systems. The course begins with a discussion on analog-time, discrete-time signals and, systems. The syllabus revisits the continuous time transform methods like Fourier and Laplace. This will be followed by discrete time transform methods like the Z transform, DFT, and its properties and system theoretic implications. Later, the concepts and foundations of digital filter design and its realization are built up for FIR and IIR filters.

Course Contents:**UNIT I****Introduction to signals and System:**

Representation of continuous and discrete time signals, Basic operations Sampling Theorem, Linear convolution, Correlation.

UNIT II**Revision of Fourier and Laplace analysis:**

Significance of Fourier series in LTI system, continuous time Fourier series formula. Dirichlet conditions & properties, S-plane mapping, ROC properties, and examples, Relationship between Fourier and Laplace Transform, Pole-zero Plot,

Discrete time Fourier Transforms: Discrete Time Fourier Transform, Conditions and properties of DTFT, Discrete Fourier Transform, Properties of DFT, Inverse Discrete Fourier Transform.

Z-Transform: - Z-transform, ROC and it's properties, Stability analysis

Digital FIR filters: Introduction to Digital Filter: FIR, IIR and their

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Analyze and plot continuous and discrete signals, understand sampling process, determine respective characteristics
- CO2: Classify various types of systems and analyze system characteristics in time domain
- CO3: Determine and understand appropriate continuous time transformation technique for signal analysis.
- CO4: Analyze the signal and its properties in its frequency domain using discrete time transformation techniques.
- CO5: Apply transforms and analyze system stability.
- CO6: Understand the use of digital filter and their application.

Textbooks:

- 1. Digital Signal Processing- J.G. Proakis & D. G. Manolakes, 4th Edition-PHI
- 2. Signals & Systems – Alan V Oppenheim, Alan S Willsky– 2nd/ 2011–PHI

Reference Books:

- 1. Principle of Signal Processing and Linear System: B.P. Lathi, First Edition, Oxford University Press.
- 2. Digital Signal Processing: P. Ramesh Babu: Scitech,2nd Edition.
- 3. Digital Signal Processing - Computer Based Approach: S. K . Mitra, Second Edition, MGH.

Course Title	Design and Analysis of Algorithms
Course Code (Credit)	CS30001 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS21001

Course Objectives:

- To understand the importance of algorithm
- To analyze the complexity of an algorithm in terms of time and space complexities
- To understand various problem solving techniques
- To learn about amortized analysis of algorithms
- To design and implement various programming paradigms and its complexity

Course Contents:

UNIT I

Introduction:

Concepts in algorithm analysis & design motivation, Space and Time Complexity of algorithm, Asymptotic Notations (Big Oh, Omega, Theta), Analysis of time complexity of Insertion Sort by step count method, Solving recurrences using Iterative, Substitution, Recurrence Tree, Master theorem

UNIT II**Divide & Conquer and Greedy Approaches:**

Divide and Conquer method, Greedy method, Huffman code, Minimum spanning trees, Dijkstra algorithm, Knapsack problem, Job sequencing with deadlines.

UNIT III**Dynamic Programming Approaches:**

Dynamic Programming, Knapsack problem, Matrix Chain Multiplication, longest common subsequence Multistage graphs, All pair's shortest paths, Optimal binary search trees, Travelling salesman problem.

UNIT IV**Amortization:**

Randomized Algorithms and Amortized Analysis, Las Vegas and Monte Carlo types, Randomized quick sort and its analysis, Min-Cut algorithm.

UNIT V**NP Problems:**

NP-Hard and NP-complete problems, Basic concepts, Reducibility, Vertex cover, 3CNF_SAT, clique, Hamiltonian cycle, TSP, Approximation algorithms, Vertex cover, TSP.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Analyze the time and space complexity for any algorithm

CO2: Compare and contrast different algorithm techniques

CO3: Apply the design techniques of algorithm in solving real world problems

CO4: Perform amortize analysis for any algorithm

CO5: Modify existing algorithms to apply in common engineering design situations

CO6: Use NP class of problems to propose approximation algorithms

Textbooks:

1. T. Cormen, C. Lieserson, R. Rivest, C. Stein, "Introductions to Algorithms", Third Edition, Prentice-Hall/India, 2009.

Reference Books:

1. A. M. Tenenbaum, Y. Langsam, M. J. Augestien, "Data Structures using C",

First Edition, Pearson Education, 2007.

2. E. Harowitz, S. Sahni, S. Rajsekaran, "Fundamentals of Computer Algorithms", Universities press.

Course Title	Software Engineering
Course Code (Credit)	CS31001(L-T-P-Cr: 3-1-0-4)

Course Objectives:

- To understand the Software Engineering Practice
- To understand the Software Engineering Process Models
- To understand Design Engineering, Web applications
- To gain knowledge of the software testing
- To understand Software Project Management

Course Contents:

UNIT I

Introduction:

Role of Software Engineer, Software Components, Software Characteristics, Software Crisis, Software Engineering Processes, Similarity and Differences from Conventional Engineering Processes, Quality Attributes.

Assessment:

How Software Engineering Changes? Software Development Life Cycle (SDLC) Models: Water Fall Model, Prototype Model, Spiral Model, Evolutionary Development Models, Iterative Enhancement Models, Choosing a social relevant problem, Summary Team Report.

UNIT II

Requirement Engineering Process:

Elicitation, Analysis, Documentation, Review and Management of User Needs, Feasibility Study, Information Modeling, Data Flow Diagrams, Entity Relationship Diagrams, Designing the architecture.

Assessment: Impact of Requirement Engineering in their problem, Decision Tables, SRS Document, IEEE Standards for SRS, Architectural design, component level design, user interface design, WebApp Design, Submission of SRS Document for Team Project.

UNIT III

Quality concepts, Review techniques, Software Quality Assurance (SQA): Verification and Validation, SQA Plans, Software Quality Frameworks.

Assessment: Framing SQA Plan, ISO 9000 Models, SEI-CMM Model and their relevance to project Management, Other emerging models like People CMM.

UNIT IV

Testing Objectives, Unit Testing, Integration Testing, Acceptance Testing, Regression Testing, Testing for Functionality and Testing for Performance, Top-Down and Bottom-Up Testing, Software Testing Strategies, Strategies: Test Drivers and Test Stubs, Structural Testing (White Box Testing), Functional Testing (Black Box Testing), Testing conventional applications, object oriented applications, Web applications, Formal modeling and verification, Software configuration management, Product metrics.
Assessment: Team Analysis in Metrics Calculation.

UNIT V:

Project Management Concepts, Process and Project Metrics, Estimation for Software projects, Project Scheduling, Risk Management, Maintenance and Re-engineering. Assessment: Preparation of Risk mitigation plan.

Course Outcomes:

Upon completion of the course, the students will be able to:

CO1: Identify appropriate software process models for developing real life projects

CO2: Assess each module given the overall Software engineering practice

CO3: Enhance the software project management skills

CO4: Comprehend the systematic methodologies involved in SE

CO5: Work ethically in a team as well as independently on software projects and adapt to the everchanging dynamic real world situations.

CO6: Design and develop a software product in accordance with SE principles

Textbooks:

1. R. S. Pressman, "Software Engineering: A Practitioners Approach", Eighth Edition, McGraw Hill, 2010.
2. Rajib Mall, "Fundamentals of Software Engineering", Fifth Edition, PHI Publication, 2009.
3. Pankaj Jalote, "Software Project Management in Practice", Pearson Education, New Delhi, 2002.

Course Title	Computer Networks
Course Code (Credit)	CS30003 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To provide insight about fundamental concepts and reference models (OSI and TCP/IP) and its functionalists
- To gain comprehensive knowledge about the principles, protocols, and

- significance of Layers in OSI and TCP/IP
- To know the implementation of various protocols and cryptography techniques
- Learn the flow control and congestion control algorithms

Course Contents:

UNIT I

Data Communications:

Data Transmission, Multiplexing, Data Encoding Techniques, Introduction to computer networks, Network, Topologies, Reference Models: ISO/OSI Model and TCP/IP Model.

UNIT II

Physical Layer:

Transmission Media, Analog signals, Digital Signals, Data Link Layer, Error Detection and Correction, Parity, LRC, CRC, Hamming Code, Flow Control and Error Control, Stop and wait, ARQ, Sliding window – IEEE, Ethernet.

UNIT III

Network Layer:

Packet Switching and Circuit Switching, IP addressing methods, Subnetting, Supernetting, Routing Protocols: IP, ARP, RARP, DHCP, Routing Algorithms: Distance Vector Routing, Link State Routing.

UNIT IV

Transport Layer:

Transport Services, UDP, TCP, Congestion Control, Quality of Services (QOS).

UNIT V

Application Layer:

Domain Name Space (DNS), Electronic Mail, HTTP, WWW.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Use of different models for study of computer networks

CO2: Identify the components required to build different types of networks

CO3: Choose the required functionality at each layer for given application

CO4: Identify solution for each functionality at each layer

CO5: Trace the flow of information from one node to another node in the network

CO6: Build networking solutions using the concepts of world wide web and electronic mail technologies

Textbooks:

1. Andrew S. Tanenbaum, David J. Wetherall, “Computer Networks”, Sixth

Edition, Pearson Publication, 2011.

Reference Books:

1. W. Stallings, “Data and Computer Communication”, Tenth Edition, Pearson Education, 2018.
2. Larry L. Peterson, Bruce S. Davie, “Computer Networks: A Systems Approach”, Sixth Edition, Morgan Kaufmann Publishers, 2011.
3. Nader. F. Mir, “Computer and Communication Networks”, First Edition, Pearson Publishers, 2007.

Course Title	Compiler
Course Code (Credit)	CS30006 (L- T- P-Cr: 3-0-0-3)
Pre-requisites	CS21001

Course Objectives:

- To introduce the major concept areas in compiler design and know the various phases of the compiler
- To understand the various parsing algorithms and comparison of the same
- To provide practical programming skills necessary for designing a compiler
- To gain knowledge about the various code generation principles
- To understand the necessity for code optimization

Course Contents:

UNIT I

Introduction to Compilation:

Compilers, Analysis of the source program, Phases of a compiler, Cousins of the Compiler, Grouping of Phases, Compiler construction tools, Lexical Analysis, Role of Lexical Analyzer, Input Buffering, Specification of Tokens.

Lab Component: Tutorial on LEX / FLEX tool, Tokenization exercises using LEX.

UNIT II

Syntax Analysis:

Role of the parser, Writing Grammars, Context, Free Grammars, Top Down parsing, Recursive Descent Parsing, Predictive Parsing, Bottom-up parsing, Shift Reduce Parsing, Operator Precedent Parsing, LR Parsers, SLR Parser, Canonical LR Parser, LALR Parser.

Lab Component: Tutorial on YACC tool, Parsing exercises using YACC tool.

UNIT III

Intermediate Code Generation:

Intermediate languages, Declarations, Assignment Statements, Boolean

Expressions, Case Statements, Backpatching, Procedure calls.

Lab Component: A sample language like C-lite is to be chosen. Intermediate code generation exercises for assignment statements, loops, conditional statements using LEX/YACC.

UNIT IV

Code Optimization and Run Time Environments:

Introduction, Principal Sources of Optimization, Optimization of basic Blocks, DAG representation of Basic Blocks, Introduction to Global Data Flow Analysis, Runtime Environments, Source Language issues, Storage Organization, Storage Allocation strategies, Access to non-local names, Parameter Passing, Error detection and recovery.

Lab Component: Local optimization to be implemented using LEX/YACC for the sample language.

UNIT V

Code Generation:

Issues in the design of code generator, The target machine, Runtime Storage management, Basic Blocks and Flow Graphs, Next-use Information, A simple Code generator, DAG based code generation, Peephole Optimization. Lab Component: DAG construction, Simple Code Generator implementation, DAG based code generation using LEX/YACC for the sample language.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Identify the phases of a compiler to translate from source code to executable code
- CO2: Apply the knowledge of LEX & YACC tool to develop a scanner and parser
- CO2: Design and develop software system for backend of the compiler
- CO3: Suggest the necessity for appropriate code optimization techniques
- CO4: Conclude the appropriate code generator algorithm for a given source language
- CO5: Identify the effectiveness of optimization and learn various machine independent and machine dependent optimization techniques.
- CO6: Design a compiler for any programming language

Textbooks:

1. Alfred V. Aho, Jeffrey D Ullman, "Compilers: Principles, Techniques and Tools", Second Edition, Pearson Education , 2014.
2. Jean Paul Tremblay, Paul G Serenson, "The Theory and Practice of Compiler Writing", BS Publications, 2005.

Reference Books:

1. Allen I. Holub, "Compiler Design in C", Prentice Hall of India, 2003.
2. C. N. Fischer, R. J. LeBlanc, "Crafting a compiler with C", Benjamin Cummings, 2003.
3. Kenneth C. Loudon, "Compiler Construction: Principles and Practice", Thompson Learning, 2003.

Course Title	ARM and Advanced Microprocessors
Course Code (Credit)	EC30007 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of this course is to teach the higher-level concepts of Advanced Microprocessors (like 80286, 80386 and Pentium) and ARM to the students. The students learn about Multitasking, Virtual memory, Memory management, Paging, TLB, RISC features, Pipelining and Branch Prediction like concepts. They develop skills for writing programs on ARM to solve simple problems as well as some real time applications.

Course Contents:

Introduction:

Overview of Intel higher level Processors, Concept of Multitasking, Virtual memory & Memory management.

Intel 80286 & 80386:

Brief outline of Processor Architecture, Mode of operation, Segment descriptor, Privilege level & protection and Task switching in 80286, Virtual 86 mode, Paging and TLB in 80386

Pentium Processor:

Features of RISC processors & Implementation of RISC features in Pentium, Pipelining, Superscalar execution & Branch prediction Technique

ARM & Interfacing:

ARM design, ARM Processor fundamentals: Registers, CPSR, Memory map, Pipelines, Exceptions, Interrupt Vector Table, Introduction to ARM Instruction set and Thumb instructions, Interfacing – LCD, ADC, DAC, Stepper motor, UART

Course Outcomes

Upon completion of this course, the students will be able to:

CO1: understand the concepts implemented in higher level Processors like Multitasking, Virtual Memory, Memory Management etc.

CO2: examine the mode of Operation of 80286, Concept of program invisible registers, Segment Descriptors etc.

CO3: analyze Segment Descriptors, Privilege level and Protection, Virtual '86

- Mode and Paging in 80386, enhanced features incorporated in 80486
- CO4: analyze the RISC features implemented in the design of Pentium Processors, Parallel processing through U & V Pipelines / Superscalar Execution and Branch Prediction Techniques
- CO5: acquire the knowledge of a 32-bit ARM Processor, its RISC features, Registers, Pipelining and Interrupts
- CO6: examine the 32-bit ARM instruction set, 16-bit Thumb instructions and Interfacing

Textbooks:

1. Advanced Microprocessor and Peripherals - Architecture, Programming and Interfacing by A. K. Ray and K. M. Bhurchandi - McGraw Hill Education Pvt Ltd - 3rd Edition
2. ARM Assembly Language Programming & Architecture - M A Mazidi & others, Micro Digital Ed, ISBN: 9780997925906.

Reference Books:

1. The Intel Microprocessors 8086/8088, 80186/80188, 80386, 80486, Pentium and Pentium Pro - Processor by B. B. Brey - PHI - 8th Edition
2. Microprocessors & Interfacing, Programming & Hardware by D. V. Hall - TMH - 3rd Edition.
3. ARM Assembly Language: Fundamentals and Techniques by William Hohl
4. ARM System Developers Guide Design & Optimizing System Software – Andrew N. Sloss & others - Elsevier.

Course Title	Artificial Intelligence
Course Code (Credit)	CS30002 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS30001

Course Objectives:

- To understand the various characteristics of Intelligent agents
- To learn the different search strategies in AI
- To learn to represent knowledge in solving AI problems
- To understand the ways of planning and acting in the real world
- To know about the models behind the AI application

Course Contents:

UNIT I

Introduction:

Introduction, Definition, Future of Artificial Intelligence, Characteristics of Intelligent Agents, Typical Intelligent Agents, Problem Solving Approach to Typical AI problems.

UNIT II

Problem Solving Methods:

Problem solving Methods, Search Strategies, Uninformed, Informed, Heuristics, Local Search Algorithms and Optimization Problems, Searching with Partial Observations, Backtracking Search, Performance of search algorithms.

UNIT III

Knowledge Representation:

First Order Predicate Logic, Unification, Forward Chaining, Backward Chaining, Resolution, Knowledge Representation using First order Predicate logic, Reasoning Systems.

UNIT IV

Planning:

Planning with state-space search, Partial-order planning, Planning graphs, planning and acting in the real world, Plan generation systems.

UNIT V

Uncertain Knowledge and Reasoning:

Uncertainty, Review of probability, Probabilistic Reasoning, Bayesian networks, Inferences in Bayesian networks, Temporal models, Hidden Markov models.

Course Outcomes:

- CO1: Discover the concepts, applications, and the theory underlying AI.
- CO2: Identify problems that are amenable to be solved by AI methods
- CO3: Analyze the issues of knowledge representation and search techniques.
- CO4: Analyze the engineering issues underlying the design of AI systems.
- CO5: Discuss the uncertain knowledge on reasoning concepts in AI.
- CO6: Apply AI techniques to develop programs to solve real life problems in different domains.

Textbooks:

1. Stuart Russel, Peter. Norvig, "Artificial Intelligence – A Modern Approach", Fourth Edition, Pearson Education, 2022

Reference Books:

1. Introduction to Artificial Intelligence and Expert Systems, Dan W. Patterson, Pearson Education.

Course Title	Modeling and Simulation
Course Code (Credit)	CS30025 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To define important terminologies and classify systems/models
- To understand continuous and discrete modelling of computer systems
- To understand the analytical modelling of computer systems
- To enable the students to develop new queueing analysis for both simple and complex systems
- To appreciate the use of smart scheduling and introduce the students to analytical techniques for evaluating scheduling policies

Course Contents:

UNIT I

Simulation:

Inventory Concept: The technique of Simulation, Major application areas, concept of a System, Continuous and discrete systems, Systems modeling, types of models, Progress of a Simulation Study, Monte Carlo Method, Comparison of Simulation and Analytical Methods.

UNIT II

Applications:

Discrete-Time Markov Chains, Ergodicity Theory, Real World Examples, Google, Aloha, Transition to Continuous-Time Markov Chain, M/M/1 and PASTA.

UNIT III

Queueing Analysis:

Server Farms: M/M/k and M/M/k/k, Capacity Provisioning for Server Farms, Time Reversibility and Burke's Theorem, Networks of Queues and Jackson Product Form, Classed and Closed Networks of Queues.

UNIT IV

Matrix Analytic Methods:

Case Study of Real-world Workloads, Phase-Type Distributions and Matrix-Analytic Methods, Networks with Time-Sharing Servers, M/G/1 Queue and the Inspection Paradox, Task Assignment Policies for Server Farms.

UNIT V

Scheduling Policies:

Performance Metrics, Scheduling, Non-Preemptive and Preemptive Non-Size-Based Policies, Scheduling Non-Preemptive and Preemptive Size-Based Policies, Scheduling, SRPT and Fairness.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Identify the technique for discrete and continuous models

CO2: Discuss open and closed queueing networks

CO3: Apply the operational laws to open and closed systems

CO4: Use discrete-time and continuous-time Markov chains to model real world systems

CO5: Develop analytical techniques for evaluating scheduling policies

CO6: Analyze the performance metrics of scheduling policies

Textbooks:

1. Mor Harchol-Balter, "Performance Modeling and Design of Computer Systems–Queueing Theory in Action", Cambridge University Press, 2013

Reference Books:

1. Lieven Eeckhout, "Computer Architecture Performance Evaluation Methods", Springer, 2010
2. A. M. Law, W. D. Kelton, "Simulation Modelling and Analysis", Fifth Edition, McGraw Hill, 2014

Course Title	High Performance Computing
Course Code (Credit)	CS30005 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS21002

Course Objectives:

- To understand the concept of advanced pipelining techniques
- To understand the current state of art in memory system design
- To know the working principle of I/O devices
- To understand the memory management techniques

Course Contents:**UNIT I:**

Introduction, Classes of computers, Defining Computer Architecture, Trends in Technology, Trends in Power and Energy in Integrated Circuits, Trends in Cost, Dependability, Measuring, Reporting and Summarizing Performance, Quantitative Principles of Computer Design

UNIT II:

Basic and Intermediate pipelining Concepts, The Major Hurdle of Pipelining, Pipeline Hazards, Pipelining Implementation, Implementation issues that makes Pipelining hard, Extending the MIPS Pipeline to Handle Multicycle Operations, The MIPS R4000 Pipeline.

UNIT III:

Instruction, Level Parallelism: Concepts and Challenges, Basic Compiler Techniques for Exposing ILP, Reducing Branch Costs with Prediction, Overcoming Data Hazards with Dynamic Scheduling, Dynamic Scheduling, Hardware, Based Speculation, Exploiting ILP Using Multiple Issue and Static Scheduling, Exploiting ILP, Advanced Techniques for Instruction Delivery and Speculation, Studies of the Limitations of ILP.

UNIT IV:

Vector Architecture, SIMD Instruction Set Extensions for Multimedia, Graphics Processing Units, Detecting and Enhancing Loop-Level Parallelism, Centralized Shared-Memory Architectures, Performance of Shared-Memory Multiprocessors, Distributed Shared Memory, Models of Memory Consistency, Multicore Processors and their Performance.

UNIT V:

Review of Memory Hierarchy Design, Cache Performance, Basic Cache Optimizations, Virtual Memory, Protection and Examples of Virtual Memory, Advanced Optimizations of Cache Performance, Memory Technology and Optimizations, Protection: Virtual Memory and Virtual Machines, Crosscutting Issues: The Design of Memory Hierarchies, Case Studies / Lab Exercises.

Course Outcomes:

Upon completion of the course, the students will be able to:

CO1 : Choose performance metrics to find the performance of systems

CO2 : Identify the program block that requires parallelism for any program

CO3: Comprehend the concept of different types of hazards along with the structural implementation and applications.

CO4: Elaborate the criteria to enhance the performance of the pipelined processors.

CO5: Design algorithms for memory management techniques for multiprocessor system

CO6: Identify various parallel architecture like centralized and distributed memory architecture require for real life application

Textbooks:

1. David. A. Patterson, John L. Hennessy, "Computer Architecture: A Quantitative approach", Sixth Edition, Morgan Kaufmann, 2012.

Reference Books:

1. Carl Hamacher, Zvonko Vranesic, Safwat Zaky, Naraig Manjikian, "Computer Organization and Embedded Systems", Sixth Edition, McGraw Hill Inc, 2022.
2. William Stallings "Computer Organization and Architecture", Eleventh Edition, Pearson Education, 2006.

Course Title	Image Processing and Applications
Course Code (Credit)	CS30015 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	MA21002

Course Objectives

- To learn the fundamentals of image processing and various transformation applied in an image
- To learn image enhancement techniques
- To understand image restoration
- To impart knowledge on different compression techniques
- To discuss on image segmentation and feature representations

Course Contents:

UNIT I

Introduction:

Introduction to Digital Image Processing, Characteristics of Digital Image, Basic relationship between pixels, Image sampling and quantization, Color models, Basic Geometric Transformations, Fourier Transform, Cosine, Sine and Hartley Transform, Hadamard-Haar-Slant Transform, Discrete Fourier Transform.

UNIT II

Image Enhancement Techniques:

Spatial Domain Methods, Basic Grey Level Transformation, Histogram Processing, Image subtraction, Image averaging, Spatial filtering, Smoothing, Sharpening filters, Laplacian filters, Frequency domain filters, Smoothing, Sharpening filters, Homomorphic filtering.

UNIT III

Image Restoration:

Model of Image Degradation/restoration process, Noise models, Spatial and Frequency Filters, Inverse filtering & Wiener Filtering, Least mean square filtering, Constrained least mean square filtering.

UNIT IV

Image Compression Fundamentals:

Image Compression Models, Lossless compression: Variable length coding, LZW coding, Bit plane coding, Predictive coding, DPCM, Lossy Compression: Lossy Predictive Coding, Transform coding, Wavelet coding.

UNIT V

Image Segmentation & Analysis:

Image Segmentation techniques, Edge detection, Thresholding, Region, Boundary Extraction & Representation, Region, Moment representation, chain

codes, Polygonal approximation, Texture, Pattern Recognition. Applications, Finger print/iris recognition, Remote sensing, Automatic character recognition, Medical image processing.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Compare various image enhancement techniques
- CO2: Construct the image from the degraded image
- CO3: Analyze and use appropriate image compression techniques
- CO4: Suggest proper image feature for classification problems
- CO5: Apply the theory and algorithms that are widely used in digital image processing
- CO5: Build image processing applications for real world problems

Textbooks:

1. Rafael C. Gonzalez, Richard E Woods, “Digital Image Processing”, Fourth Edition, Pearson Education, 2018.

Reference Books:

1. A.K. Jain, “Fundamentals of Digital Image Processing”, PHI, New Delhi, 1995.
2. S E Umbaugh, “Digital Image Processing and Analysis: Application with MATLAB and CVIP Tools”, Third Edition, Taylor & Francis, CRC Press, 2018.
3. Frank Y. Shih, “Image Processing and Pattern Recognition”, Wiley – IEEE Press, 2010.

Course Title	Machine Learning
Course Code (Credit)	CS31002 (L-T-P-Cr: 3-1-0-4)

Course Objectives:

- To provide a broad survey of different machine learning approaches and techniques
- To understand the principles and concepts of machine learning
- To understand neural networks concepts
- To learn regression and reinforcement learning
- To develop programming skills that helps to build real world applications based on machine learning

Course Contents:

UNIT I

Introduction:

Introduction: Machine learning: What and why? Types of Machine Learning, Supervised Learning, Unsupervised Learning, The Curse of dimensionality, Over and under fitting, Model selection, Error analysis and validation, Parametric vs. non-parametric models.

UNIT II

Machine Learning:

Types of Machine Learning, Supervised Learning, Classification models, Naïve Bayes Classifier, Decision trees, Support Vector Machines, KNN model, Dimensionality reduction, PCA.

UNIT III

Clustering:

Clustering approaches, Mean Shift clustering, Clustering data points and features, Bi-clustering, Multi-view clustering, K-Means clustering, K-medians clustering, Expectation Maximization (EM).

UNIT IV

Neural Networks:

Neural networks, Biological motivation for Neural Network, Neural network Representation, Perceptron, Feed forward networks, Multilayer Networks and Back Propagation Algorithms, Hidden layer representation, Application of neural network.

UNIT V

Applications and Tools:

Linear models for regression, Reinforcement Learning, Machine Learning Tools, Engineering applications.

Course Outcomes:

Upon completion of the course, the students will be able to:

CO1: Solve typical machine learning problems

CO2: Compare and contrast different data representation to facilitate learning

CO3: Apply the concept of regression methods, classification methods and clustering methods.

CO4: Suggest supervised /unsupervised machine learning approaches for any application

CO5: Implement algorithms using machine learning tools

CO6: Design and implement various machine learning algorithms in a range of real-world applications.

Textbooks:

1. Kevin P. Murphy, “Probabilistic Machine Learning”, The MIT Press, 2023.
2. Ethem Alpaydin, “Introduction to Machine Learning”, Fourth Edition, MIT

Press, 2010.

Reference Books:

2. C. M. Bishop, “Pattern Recognition and Machine Learning”, Springer, 2007.
3. Simon Haykin, “Neural Networks and Learning Machines”, Pearson 2008.

Course Title	Distributed Operating Systems
Course Code (Credit)	CS30009 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS20002

Course Objectives:

- To understand the fundamentals of distributed system
- To be able to know the basic concepts of shared memory architecture
- To be able to understand various implementation difficulties of distributed operating systems
- To be able to understand transparency in distributed operating systems

Course Contents:

UNIT-I

Fundamentals of Distributed Systems:

Introduction to distributed systems, Goals of Distributed Systems, Hardware Concepts, Software Concepts, Design Issues, Network Operating Systems, True Distributed System and Time sharing Multiprocessor Operating System, System Architectures.

UNIT-II

Communication in Distributed Systems:

Basics of Communication Systems, Layered Protocols, ATM Models, Client Server Model, Blocking Primitives and Non Blocking Primitives, Buffered Primitives and Unbuffered Primitives, Reliable and Unreliable primitives, Message Passing, Remote Procedure Call.

UNIT-III

Synchronization and Processes:

Clock Synchronization, Mutual Exclusion, Election Algorithm, Atomic Transactions, Deadlock in Distributed Systems, Process and Threads, System Models, Processor Allocation, Process Scheduling.

UNIT-IV

Consistency, Replication and Fault Tolerance:

Data Centric Consistency Models, Client-Centric Consistency Models, Replica Management, Consistency protocols, Fault Tolerance, Process Resilience, Distributed Commit, Reliable Client Server Communication, Reliable Client Server Communication.

UNIT-V

Overview of shared memory:

Architecture, Algorithm, Protocols, Design Issues, consistency model, Page based Distributed Shared Memory, Shared variable Distributed shared Memory, and Object based Distributed Shared Memory.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Assess the concept of Distributed Operating Systems
- CO2: Enlist the communication techniques in Distributed Operating Systems
- CO3: Determine the clock synchronous concepts and algorithms
- CO4: Examine the distributed system that fulfills requirements with regards to key distributed systems properties
- CO5: Discuss distributed shared memory architectures and algorithms
- CO6: Analyze the distributed files systems

Textbooks:

1. Andrew S. Tanenbaum, "Distributed Operating Systems", Pearson Education, 1995.

Reference Books:

1. G. Coulouris, J. Dollimore, and T. Kindberg, "Distributed Systems: Concepts & Design", Pearson Publication, 4th Edition, 2005.
2. Pradeep K. Sinha, "Distributed Operating Systems Concepts and Design", PHI, 1998.

Course Title	VLSI Circuits and System
Course Code (Credit)	EC30005 (L-T-P-Cr:3-0-03)

Course Objective:

The VLSI design course aims for students to learn fundamental theories and techniques of digital VLSI Circuits & Systems using CMOS technology, and layout, about the digital integrated circuits domain. In addition, the course aims to enable students to analyze and design different VLSI architectures using the fundamental concepts of digital VLSI systems.

Course Contents:

UNIT I

Introduction to VLSI:

VLSI Design Methodology, VLSI Design Flow, VLSI Design Hierarchy, VLSI Design Styles.

UNIT II

MOSFET:

Two terminal MOS Structure, MOS Structure under external Bias Condition, Derivation of Threshold Voltage and its components, MOSFET structure and its Qualitative Analysis, MOSFET Current-Voltage Relationship and its Characteristics, MOSFET Scaling and short geometry effects (only qualitative)

UNIT III

Inverter DC & Switching Characteristics:

Inverter Noise Margin, CMOS Inverter DC Characteristics and its analysis, Delay time definitions, derivation of pHL , pLH for CMOS Inverter, super buffer, Power dissipations in CMOS, Interconnect Parameters- Resistance, Capacitance, Inductance, Lumped RC Model, Distributed RC Model.

UNIT IV

CMOS Combinational circuits:

CMOS NAND and NOR Gate and their qualitative analysis with sizing, CMOS Complex Logic Circuit, , logical efforts, NMOS and PMOS as Pass transistor, PTL and CMOS Transmission Gate based logic circuit, Stick Diagram and layout of Inverter & Complex logic Circuit

UNIT V

High performance CMOS logic and Sequential logic Circuits:

Dynamic Logic Concept, Synchronous Dynamic Logic Circuits (Domino and NOR logic Circuit), Bistable Circuit, SR Latch, Clocked Latch and Flip Flop Circuits.

VLSI Subsystem:

Approach to digital system design, Adder(CMOS, TG,PTL based) Multiplier, SRAM (6T) 5.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: understand VLSI design flow, design strategy and role of different methods for chip design
- CO2: apply knowledge to estimate different parameters of MOS transistor.
- CO3: analyze different performance metrics of CMOS inverter circuit

- CO4: create combinational circuits for different logic design expressions using CMOS style
- CO5: analyze different CMOS sequential circuits.
- CO6: create different VLSI sub-systems like adder, multiplier, etc.

Textbooks:

1. CMOS digital integrated circuits by Sung –Mo KANG Y. Lebelec, 4th edition, Mc-Graw Hill publications.
2. CMOS VLSI Design : A Circuits And Systems Perspective by Neil Weste, David Harris, Pearson, 2023

Reference Books:

1. CMOS Circuit Design, Layout, Simulation R. Jacob baker, Harry W. Li, David E Boyce, 4th edition, Wiley publications.
2. VLSI Design Methodology Development by Thomas Dillinger, Pearson, 2020

Course Title	Computational Intelligence
Course Code (Credit)	CS30011 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To understand the basic concepts and characteristics of soft computing
- To understand and analyse fuzzy rules, fuzzy reasoning and various fuzzy inference systems
- To be able to know derivative free optimization and apply genetic algorithms to optimization problems
- To apply neural networks to various classification problems.
- To know some hybrid models such as adaptive Neuro-fuzzy inference systems

Course Contents:

UNIT I

Introduction:

Introduction, Soft Computing constituents and Conventional AI, Neuro-Fuzzy and Soft Computing characteristics

UNIT II

Artificial Neural Networks:

Introduction to ANN, Perceptrons and MLP, Adaline and Madaline, Back-propagation Multilayer Perceptrons (BPMLP), Radial Basis Function Networks

(RBF), Kohonen Self-Organizing Networks, Learning Vector Quantization, Hebbian Learning, Hopfield networks

UNIT III

Fuzzy Set Theory:

Fuzzy sets, Basic Definition and Terminology, Set-theoretic Operations, Member Function Formulation and Parameterization, More on Union, Intersection and Complement, Extension Principle and Fuzzy Relations, Fuzzy If-Then Rules, Fuzzy Reasoning, Fuzzy Inference Systems, Mamdani Fuzzy Models, Sugeno Fuzzy Models, Tsukamoto Fuzzy Models, Adaptive Neuro-Fuzzy Inference Systems(ANFIS), ANFIS Architecture, Hybrid Learning Algorithm

UNIT IV

Particle Swarm Optimization:

PSO Model, Global Best, Local Best, Velocity Update Equations, Position Update Equations, Velocity Clamping, Inertia Weight, Constriction Coefficients, Synchronous and Asynchronous Updates, Binary PSO.

UNIT V

Differential Evolution:

DE as modified GA, generation of population, operators and their implementation.

UNIT VI

Ant Colony Optimization:

Basic Concepts, Ant System, Application.

UNIT VII

Artificial Bee Colony:

Historical Development, Types of Bees and Their Role in the Optimization Process.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Identify the basic concepts and characteristics of soft computing and also its associated methodologies.

CO2: Apply various set theoretic operations in fuzzy sets.

CO3: Analyze fuzzy rules, fuzzy reasoning and various fuzzy inference systems.

CO4: Choose derivative free optimization and apply genetic algorithms to optimization problems.

CO5: Assess concepts of artificial neural networks and apply neural networks to various classification problems.

CO6: Analyze some hybrid models such as adaptive neuro-fuzzy inference systems.

Textbooks:

1. Neuro-Fuzzy and Soft Computing, Jang, Sun, Mizutani, Pearson Education

Reference Books:

1. Swarm Intelligence Algorithms: A Tutorial, Adam Slowik, Ed: CRC Press, 2020
2. Neural Networks: A Comprehensive Foundation, Simon Haykin, Pearson Education
3. Genetic Algorithms, David E. Goldberg, Pearson Publication, 2003

Course Title	Data Mining and Data Warehousing
Course Code (Credit)	CS30013 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS20006

Course Objective:

- To understand the basic principles, concepts, applications of data mining and data mining tools.
- To know the kinds of patterns discovered by association rule mining algorithms
- To understand various classification and prediction algorithms
- To be able to apply data mining techniques on web, spatial, temporal, text and multimedia data mining.

Course Content:

UNIT I

Introduction to Data Mining Systems:

Knowledge Discovery Process, Data Mining Techniques, Issues, applications, Data Objects and attribute types, Statistical description of data.

Data Preprocessing: Cleaning, Integration, Reduction, Transformation and discretization, Data Visualization, Data similarity and dissimilarity measures

UNIT II

Data Warehousing and Online Analytical Processing:

Basic Concepts, Data Warehousing Architecture, Multidimensional Data Model, Data Warehouse Schemas for Decision Support, Building a Data Warehouse ,

Concept Hierarchies, Characteristics of OLAP Systems, Typical OLAP Operations, OLAP and OLTP.

UNIT III

Frequent Pattern Analysis:

Mining Frequent Patterns, Market Basket Analysis: The Apriori Algorithm: Finding Frequent Itemsets Using Candidate Generation, Generating Association Rules from Frequent Itemsets, Improving the Efficiency of Apriori, Mining Frequent Itemsets without Candidate Generation, Measuring the Quality of Rules, Association Mining to Correlation Analysis.

UNIT IV

Classification and Prediction:

Issues Regarding Classification and Prediction, Classification by Decision Tree Introduction, Naïve Bayesian Classification, Rule Based Classification, Classification by Back propagation, Support Vector Machines, Lazy Learners, Other Classification Methods, Prediction: Simple linear regression, Accuracy and Error Measures, Evaluating the Accuracy of a Classifier or Predictor.

UNIT V

Clustering:

Types of Data in Cluster Analysis, A Categorization of Major Clustering Methods, Partitioning Methods: K-Means, K-medoids, Hierarchical methods: Agglomerative and Divisive Hierarchical Clustering, Density, Based Methods, Grid-Based Methods, Model-Based Clustering Methods, Clustering High, Dimensional Data.

Course Outcome:

Upon completion of this course, the students will be able to:

- CO1: Compile the basic principles, concepts, applications of data mining and familiar with mathematical foundations of data mining tools.
- CO2: Interpret the fundamental concepts, benefits, operations associated with data warehousing and develop data warehousing models.
- CO3: Evaluate the kinds of patterns discovered by association rule mining algorithms.
- CO4: Analyze various classification and prediction algorithms for model designing.
- CO5: Apply various clustering algorithms to solve the real problems.
- CO6: Adapt various data mining techniques on web, spatial, temporal, text and multimedia data mining.

Textbooks:

1. J. Han and M. Kamber, "Data Mining: Concepts and Techniques", 4th Edition, Morgan Kaufman, 2015.

Reference Books:

1. M. H. Dunham, "Data Mining: Introductory and Advanced Topics", Pearson Education, 2006.
2. I. H. Witten and E. Frank, "Data Mining: Practical Machine Learning Tools and Techniques," Morgan Kaufmann, 2000.
3. D. Hand, H. Mannila and P. Smyth. Principles of Data Mining. The MIT Press. 2001.

Course Title	Robotics and Applications
Course Code (Credit)	CS30027 (L-T-P-Cr: 3-0-0-3)

Course Objective:

- To provide an introduction to robotics including robot classification, design and selection, analysis and applications in industry.
- To provide information on various types of actuators and sensors
- To provide the details of operations of kinematics and to gain knowledge on programming of robots
- To perform the navigation of robots through map path planning-cell decomposition

Course Contents:

UNIT I

Basic Concepts:

Introduction, Brief history, Components of robotics, Classifications of Robot, workspace, Work-envelop, Motion of robotic arm, End-effectors and its types, service robot, Laws of Robotics.

UNIT II

Actuators and sensors:

Types of actuators, Stepper, DC, Servo and brushless motors model of DC servo motor, Types of transmissions, Purpose of sensor, Internal and external sensor, common sensors, Encoders tachometers, Strain gauge based force torque sensor-proximity and distance measuring sensors.

UNIT III

Kinematics of robots:

Mathematical representation of Robots, position and orientation, Representation of joints and frames, Frames transformation, Homogeneous matrix, Denavit Hattenberg parameters, Forward and inverse kinematics: two link planar (RR)

and spherical robot (RRP). Mobile robot Kinematics: Differential wheel mobile robot.

UNIT IV

Planning and Navigation:

Introduction, path planning, Overview, Road map path planning, Cell decomposition path planning, Potential field path planning, Obstacle avoidance-case studies

UNIT V

Vision System:

Robotic vision systems, Image representation, Object recognition and categorization, Depth measurement, Image data compression, Visual inspection, Software considerations

UNIT VI

Applications:

Aerial robots, Collision avoidance robots for agriculture, Mining, Exploration, underwater, Civilian, and military applications, Nuclear applications, Space applications, Industrial robots, Artificial intelligence in robots, Application of robots in material handling, Continuous arc welding, Spot welding, Spray painting, Assembly operation, Cleaning, etc.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Explain the basic working concepts of robots

CO2: Analyze the function of sensor in robot and design the robotic arm with various tools

CO3: Program the robot for typical application and path planning of robot using robotic vision

CO4: Make use of the various robot programming languages

CO5: Conduct and design the experiments for various robot operations

CO6: Use the advanced techniques for robot processing

Textbooks:

1. Robotic Engineering and Integrated Approach by Richard D. Klafter, Thomas A. Chmielewski and Mickael Negin, Prentice Hall India, New Delhi, 2001
2. Saeed B. Nikku, "Introduction to Robotics, Analysis, Control and Applications", Third edition, Wiley, 2019

Reference Books:

1. Industrial robotic technology-programming and application by M.P.Groover et.al, McGraw Hill, 2nd edition, 2017.
2. Robotics technology and flexible automation by S.R.Deb, Sankha Deb, McGraw Hill, 2nd edition, 2017.

Course Title	Embedded System
Course Code (Credit)	EC30024 (L-T-P-Cr: 3-0-0-3)

Course Objective:

To introduce students to the modern embedded systems and programming skills to develop embedded system using PIC.

Course Contents:

UNIT I

Overview of Embedded System: Embedded Processor in System, Components of Embedded System, Brief introduction to Embedded software in system, Design Process in Embedded System, Programming methods for Embedded System case study.

UNIT II

Embedded Hardware: Real world interfacing, Parallelism in instruction level, Processor and memory selection, Memory organization, I/O Types: Serial and Parallel communication Ports, Serial bus Communication Protocols- I2C, CAN

UNIT III

Introduction to advanced Processor Architectures -Introduction to PIC microcontroller (PIC18F), PIC architecture and assembly programming, Branch, call and delay loop, IO port programming, PIC arithmetic and logic instructions, Interfacing with LCD, ADC, sensors, stepper motor, key board, DAC

UNIT IV

RTOS(Real time operating System)- OS overview, Process, Interrupt and memory management, RTOS overview, Basic Design rule using RTOS, Task scheduling using Priority based scheduling, cyclic scheduling and round robin scheduling, Case Study- RTOS μ COS-II

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Apply different design constraints for embedded systems.
- CO2: Analyse criteria for selection of processors, memory and IO system for embedded system design.
- CO3: Apply standard communication protocols for embedded system.
- CO4: Utilize programming skills to develop software for different hardware requirements.
- CO5: Develop PIC based system using Assembly/Embedded C coding.
- CO6: Apply RTOS Concepts in Embedded System

Textbooks:-

1. PIC Microcontrollers and Embedded Systems using ALP and C for PIC18F by M. A. Mazidi, R. D. McKinlay, D. Causey, Pearson, 2021.
2. Embedded Systems: Architecture, Programming & Design, Raj Kamal, TMH, 2011

Reference Book:

1. Embedded System Design: A unified Hardware/ Software Introduction, by Frank Vahid, Willey, 2011.
2. Design with PIC Microcontrollers , J. B. Peatman, Pearson India,2008

Course Title	Agile Software Development
Course Code (Credit)	CS40006 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To develop an understanding on agile software development
- To learn about the principles, planning and requirement in agile software development
- To understand the testing methodologies in agile software development
- To explore the metrics and measurement in agile software development

Course Contents:

UNIT I

Introduction:

Agile Software Development: Basics and Fundamentals of Agile Process Methods, Values of Agile, Principles of Agile, Stakeholders, Challenges Lean Approach: Waste Management, Kaizen and Kanban, Add process and products add value, Roles related to the lifecycle, Differences between Agile and traditional plans, Differences between Agile plans at different lifecycle phases, Testing plan links between testing, Roles and key techniques, principles, Understand as a means of assessing the initial status of a project/ How Agile helps to build quality.

UNIT II

Principles:

Agile and Scrum Principles: Agile Manifesto, Twelve Practices of XP, Scrum Practices, Applying Scrum, Need of scrum, Working of scrum, Advanced Scrum Applications, Scrum and the Organization, Scrum values.

UNIT III

Planning and Product Management:

Agile Product Management: Communication, Planning, Estimation, Managing the Agile approach, Monitoring progress, Targeting and motivating the team, Managing business involvement, Escalating issue, Quality, Risk, Metrics and Measurements.

UNIT IV

Requirements and Testing:

Agile Requirements: User Stories, Backlog Management, Agile Architecture: Feature Driven Development, Agile Risk Management: Risk and Quality Assurance, Agile Tools, Agile Testing: Agile Testing Techniques, Test- Driven Development, User Acceptance Test, Agile Review: Agile Metrics and Measurements, The Agile approach to estimating and project variables.

UNIT V

Measurement:

Agile Measurement, Agile Control, Control parameters, Agile approach to Risk, The Agile approach to Configuration Management, The Atern Principles, Atern Philosophy, Rationale for using Atern, Refactoring, Continuous integration, Automated Build Tools, Scaling Agile for large projects: Scrum of Scrums, Team collaborations, Scrum, Estimate a Scrum Project, Track Scrum Projects, Communication in Scrum Projects, Best Practices to Manage Scrum.

Course Outcomes:

- CO1: Assess principles, planning and requirement in agile software development
- CO2: Distinguish between agile software development and traditional software development
- CO3: Identify Agile Requirements
- CO4: Suggest agile software development approaches for any real-time problem
- CO5: Provide measurement, metrics necessary for problems involving agile software development
- CO6: Inference best practices of traditional and agile software development and use in real-time problem solving

Textbooks:

1. Robert C. Martin, “Agile Software Development, Principles, Patterns, and Practices”, First Edition, Pearson Education India, 2002.
2. Mike Cohn “Succeeding with Agile: Software Development Using Scrum”, Pearson Education, 2010.

Reference Book

1. Robert C Martin, Micah Martin, “Agile Principles, Patterns and Practices in C#”, Pearson Education, 2007.

Course Title	Deep Learning Techniques
Course Code (Credit)	CS40001 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS31001

Course Objectives:

- To introduce building blocks of deep neural network architecture
- To learn deep learning algorithms and its problem settings
- To understand representation and transfer of knowledge using deep learning
- To learn to use deep learning tools and framework for solving real-life problems
- To use Python for Deep Learning

Course Contents:

UNIT I

Deep Networks:

Deep Feedforward Networks, Learning XOR, Gradient Based learning, Hidden Units, Back-propagation and other Differential Algorithms, Regularization for Deep Learning, Optimization for training Deep Models.

UNIT II

Convolutional Networks:

Convolution operation, Motivation, Pooling, Convolution and Pooling as strong prior, Efficient convolution algorithms, Unsupervised features, Sequence Modeling: Recurrent and Recursive Nets, LSTM Networks, Applications, Computer Vision, Speech Recognition, Natural Language Processing.

UNIT III

Linear factor Models:

Probabilistic PCA and Factor Analysis, Independent Component Analysis (ICA), Auto encoders, Regularized Auto encoders, Representational Power, Layer size and Depth, Stochastic Auto encoders, Applications.

UNIT IV

Representation Learning:

Greedy Layer-wise Unsupervised Pre-Training, Transfer learning and Domain Adaptation, Deep Generative Models.

UNIT V

Deep Learning with Python:

Introduction to Keras and Tensor flow, Deep Learning for computer vision, convnets, Deep Learning for Text and Sequences, Generative Deep Learning, Text Generation with LSTM, DeepDream, Neural Style Transfer, Generating images with variational auto encoders, Generative Adversarial Networks (GAN).

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Assess the concept of deep learning
- CO2: Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains
- CO3: Incorporate transfer of knowledge in machine learning algorithms
- CO4: Implement deep learning algorithms and solve real-world problems
- CO5: Develop Deep Learning techniques using Python
- CO6: Represent learning Models

Textbooks:

1. Ian Goodfellow, Yoshua Bengio, Aaron Courville, “Deep Learning”, The MIT Press, 2016.

Reference Books:

1. Francois Chollet, “Deep Learning with Python”, Manning Publications, 2017.
2. Aurélien Géron, “Hands-On Machine Learning with Scikit-Learn and TensorFlow: Concepts, Tools, and Techniques to Build Intelligent Systems”, First Edition, O'Reilly Media, 2017.
3. Josh Patterson, “Deep Learning: A Practitioner's Approach”, First Edition, O'Reilly Media.

Course Title	Human Computer Interaction
Course Code (Credit)	CS40005 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To provide an overview of the concepts of human-computer interfaces
- To understand the theoretical dimensions of human factors involved in the acceptance of computer interfaces
- To understand the implementation of human-computer interfaces
- To identify the various tools and techniques for interface analysis, design and evaluation

Course Contents:

UNIT I:

HCI Foundations: Input-output channels, Human memory, Thinking: reasoning and problem solving, Emotion, Individual differences, Psychology and the design of interactive systems, Text entry devices, Positioning, pointing and drawing, Display devices, Devices for virtual reality and 3D interaction, Physical controls, Sensors and special devices, Paper: Printing and scanning.

UNIT II:

Designing, Programming Interactive systems, Models of interaction, Frameworks and HCI, Ergonomics, Interaction styles, Elements of the WIMP interface, The context of the interaction, Experience, Engagement and fun, Paradigms for interaction. Centered Design and testing, Interaction design basics, The process of design, User focus, Scenarios, Navigation design, Screen design and layout, Iteration and prototyping.

UNIT III:

HCI in the software process, Iterative design and prototyping, Design rules, Principles to support usability, Standards and Guidelines, Golden rules and heuristics, HCI patterns. Implementation support, Elements of windowing systems, Programming the application, Using toolkits, User interface management systems.

UNIT IV:

Evaluation techniques, Evaluation through expert analysis, Evaluation through user participation, Universal design, User support. Models and Theories, Cognitive models, Goal and task hierarchies, Linguistic models, The challenge of display-based systems, Physical and device models, Cognitive architectures.

UNIT V:

Collaboration and communication, Face-to-face communication, Conversation, Text-based communication, Group working, Dialog design notations, Diagrammatic notations, Textual dialog notations, Dialog semantics, Dialog analysis and design Human factors and security, Groupware, Meeting and decision support systems, Shared applications and artifacts, Frameworks for groupware, Implementing synchronous groupware, Mixed, Augmented and Virtual Reality.

Course Outcomes:

Upon completion of the course, the students will be able to:

CO1: Describe the Human Computer Interaction and its fundamentals.

CO2: Design and Develop processes and life cycle of Human Computer Interaction

CO3: Analyze product usability evaluations and testing methods

CO4: Apply the interface design standards/guidelines for cross cultural and disabled users

CO5: Categorize, Design and Develop Human Computer Interaction in proper architectural structures

CO6: Build the application oriented human computer interface for solving real life problems.

Textbooks:

1. Alan Dix, Janet Finlay, G D Abowd, R Beale, "Human, Computer Interaction", Third Edition, Pearson Publishers, 2008.
2. Shneiderman, Plaisant, Cohen, Jacobs, "Designing the User Interface: Strategies for Effective Human Computer Interaction", Fifth Edition, Pearson Publishers, 2010.

Course Title	Computer Graphics and Multimedia Systems
Course Code (Credit)	CS40007 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	MA21002

Course Objectives

- To understand the basics of various inputs and output computer graphics hardware devices
- Exploration of fundamental concepts in 2D and 3D computer graphics
- To know 2D raster graphics techniques, 3D modeling, geometric transformations, 3D viewing and rendering
- Exploration of fundamental concepts in multimedia systems, file handling, hypermedia

Course Contents:**UNIT I****Basic of Computer Graphics:**

Applications of computer graphics, Display devices, Random and Raster scan systems, Color models, Graphics Primitives: Points, Lines, Circles and ellipses as primitives, Scan conversion algorithms for primitives.*

UNIT II

Two-Dimensional Graphics:

Two dimensional geometric transformations, Matrix representations and homogeneous coordinates, Composite transformations, Two dimensional viewing, Viewing pipeline, Viewing coordinate reference frame, Window to viewport coordinate transformation, Two dimensional viewing functions, Clipping operations, Point, Line, Polygon clipping algorithms.*

UNIT III

Three-Dimensional Graphics:

Three dimensional concepts, Three dimensional object representations, Polygon surfaces, Polygon tables, Plane equations, Polygon meshes, Curved Lines and surfaces, Quadratic surfaces, Blobby objects, Spline representations, Bezier curves and surfaces, B-Spline curves and surfaces, Transformation and Viewing: Three dimensional geometric and modeling transformations, Translation, Rotation, Scaling, composite transformations, Three dimensional viewing, Viewing pipeline, Viewing coordinates, Projections, Clipping.*

UNIT IV

Multimedia System Design & Multimedia File Handling:

Data and File Formats, Multimedia basics, Multimedia applications, Multimedia system architecture, Evolving technologies for multimedia, Defining objects for multimedia systems, Multimedia data interface standards, Multimedia databases, Compression and decompression, Data and file format standards, Multimedia I/O technologies, Digital voice and audio, Video image and animation, Full motion video, Storage and retrieval technologies.*

UNIT V:

Hypermedia:

Multimedia authoring and user interface, Hypermedia messaging, Mobile messaging, Hypermedia message component, Creating hypermedia message, Integrated multimedia message standards, Integrated document management, Distributed multimedia systems.*

*Programming assignments are mandatory.

Course Outcomes:

Upon completion of the course, the students will be able to:

CO1: Make use of various computer graphics hardware and display technologies

CO2: Analyze and implement various algorithms to scan, convert the basic geometrical primitives, transformations, Area filling

CO3: Identify the use of three dimensional graphics, 3D geometric transformations, projections to detect visible surfaces

CO4: Apply 2D and 3D viewing technologies into the real world applications

CO5: Implement multimedia components efficiently

CO6: Design and develop of modeling, rendering, shading and animation.

Textbooks:

2. F. S. Hill Jr., "Computer Graphics using OpenGL", Third Edition, Pearson Education, 2003.
3. "The OpenGL Reference Manual, The Bluebook", Version 1.4, Fourth Edition, Addison-Wesley.
4. Judith Jeffcoate, "Multimedia in Practice: Technology and Applications", Pearson Education, 1998.
5. "The OpenGL Programming Guide, The Redbook", Version 2, Fifth Edition, Addison-Wesley.

Course Title	Computer Vision
Course Code (Credit)	CS30026 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS40007

Course Objective:

- To understand image formation and camera calibration
- To understand stereo vision and stereo camera geometry
- To be able to know structures from motions
- To know machine learning for computer vision

Course Contents:

UNIT I

Image formation and camera calibration:

Introduction to computer vision, Geometric camera models, Orthographic and perspective projections, Weak perspective projection, Intrinsic and extrinsic camera parameters, Linear and nonlinear approaches of camera calibration.

UNIT II

Feature detection and matching:

Edge detection, Interest points and corners, Local image features, Feature matching and Hough transform, Model fitting and RANSAC, Scale invariant feature matching.

UNIT III

Stereo Vision:

Stereo camera geometry and epipolar constraints, Essential and fundamental matrix, Image rectification, Local methods for stereo matching: Correlation and multi-scale approaches, Global methods for stereo matching: Order constraints and dynamic programming, Smoothness and graph-based energy minimization, Optical flow.

UNIT IV

Shape from Shading:

Modeling pixel brightness, Reflection at surfaces, The Lambertian and specular model, Area sources, Photometric stereo: Shape from multiple shaded images, Modeling inter-reflection, Shape from one shaded image.

UNIT V:

Structure from motion:

Camera self-calibration, Euclidean structure and motion from two images, Euclidean structure and motion from multiple images, Structure and motion from weak-perspective and multiple cameras.

UNIT VI:

Machine Learning for Computer Vision:

Introduction to Machine Learning, Image Classification, Object Detection, Semantic Segmentation, Case study on computer vision and machine learning for applied research.

Course Outcome:

Upon completion of this course, the students will be able to:

- CO1: Categorizing of image formation and camera calibration
 CO2: Apply the concepts of feature detection, Feature reduction, and matching.
 CO3: Analyze the concepts of stereo vision and stereo camera geometry.
 CO4: Design the concepts of generating shapes from shading.
 CO5: Identifying the concepts of structures from motions.
 CO6: Determine the concepts of machine learning for computer vision for applied research.

Textbooks:

1. Forsyth, D. A. and Ponce, J., "Computer Vision: A Modern Approach", 2nd Ed., Pearson Education.

Reference Books:

1. Hartley, R. and Zisserman, A., "Multiple View Geometry in Computer Vision", Cambridge University Press.

Course Title	Data Science and Analytics
Course Code (Credit)	CS30004 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	MA21002

Course Objectives:

- To understand the concepts of Data science
- To explore the big data technologies and tools
- To become familiar with statistical concepts
- To apply the different data analytics techniques

Course Contents:

UNIT I

Introduction to Data Science:

Introduction to Data, Data Science, Challenges of Traditional Systems, Evolution of Analytic Scalability, Types of Computing (Distributed, Parallel, Grid), Data Analytics Lifecycle, Introduction to Big Data (Characteristics) and Hadoop (Hadoop Ecosystem, MapReduce, Hbase, Pig, Hive, Sqoop, NOSQL), Visualizations

UNIT II

Statistical Concepts:

Data Exploration: Distribution of a single variable, Basic Concepts (populations and samples, Data sets, Variables, and observations, Types of data), Descriptive measures for categorical variables, Descriptive measures for numerical variables, Outliers and Missing values. Finding relationships among variables: Categorical

variables, Numerical variables, Categorical variables and a Numerical variable. Sampling and distributions: Terminology, Estimation, Confidence Interval estimation, Sampling distributions, Confidence interval, Hypothesis testing, Chi-square test for independence

UNIT III

Data Analytics:

Introduction, Types of Data Analytics, Importance of Data Analytics, Data Analytics Applications, Regression Modelling Techniques: Linear Regression, Multiple Linear Regression, Non Linear Regression, Logistic Regression, Time Series Analysis, Performance analysis (RMSE, MAPE).

UNIT IV

Frequent Itemsets and Association:

Introduction to Frequent Itemsets, Market-Basket Model, Algorithm for Finding Frequent, Itemsets, Association Rule Mining, Apriori Algorithm and Correlations.

UNIT V

Classification & Clustering:

Introduction to classification and clustering, Distance-Based Algorithms: K Nearest Neighbour (KNN), Decision Tree-Based Algorithms: Decision Tree (ID3 Algorithm), Support Vector Machines (Linear), Naive Bayes. Overview of Clustering Techniques, Hierarchical Clustering, Partitioning Methods, K- Means Algorithm.

UNIT VI

Data Streams:

Introduction to Mining Data Streams, Data Stream Management Systems, Data Stream Mining, Examples of Data Stream Applications, Stream Queries, Issues in Data Stream Query, Processing, Sampling in Data Streams, Filtering Streams, Counting Distinct Elements in a Stream, Estimating Moments.

Course Outcome:

Upon completion of the course, the students will be able to:

CO1: Make use of data science concepts to handle big data.

CO2: Examine the statistical concepts for finding relationships among variables and estimate data samplings.

CO3: Select the data analytics techniques & models for both data prediction and performance analysis.

CO4: Develop rules using frequent item sets and association mining.

CO5: Solve real-time problems using classification and clustering techniques.

CO6: Apply the mining techniques for data streams.

Textbooks:

Reference Books:

1. Business Analytics: Data Analysis & Decision Making by S. Christian Albright and Wayne L. Winston. 7th Edition. Published by Cengage Learning. (ISBN: 9781305947542)
2. Data Mining: Concepts and Techniques by Jiawei Han, Micheline Kamber, and Jian Pei. 3rd Edition. Published by Morgan Kaufmann. (ISBN: 9780123814791)
3. Data Science and Big Data Analytics: Discovering, Analyzing, Visualizing and Presenting Data by EMC Education Services (Editor), Wiley, 2014
Big Data, Black Book, DT Editorial Services, Dreamtech Press, 2015

Course Title	Software Testing and Automation
Course Code (Credit)	CS40003 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS31001

Course Objectives:

- To understand the criteria for test cases
- To Develop and design test cases
- To Analyse test management and test automation techniques
- To Assess test metrics and measurements
- To Design and validate website testing

Course Contents:

UNIT I

Introduction:

Testing as an Engineering Activity, Testing as a Process, Testing Maturity Model, Testing axioms, Basic definitions, Software Testing Principles, The Tester’s Role in a Software Development Organization, Origins of Defects, Cost of defects, Defect Classes, The Defect Repository and Test Design, Defect Examples, Developer/Tester Support of Developing a Defect Repository.

UNIT II

Test Case Design Strategies:

Test case Design Strategies, Using Black Box Approach to Test Case Design, Boundary Value Analysis, Equivalence Class Partitioning, State based testing, Cause-effect graphing, Compatibility testing, User documentation testing,

Domain testing, Random Testing, Requirements based testing, Using White Box Approach to Test design, Test Adequacy Criteria, Static testing vs. Structural testing, Code functional testing, Coverage and Control Flow Graphs, Covering Code Logic, Paths, Code complexity testing, Additional White box testing approaches, Evaluating Test Adequacy Criteria.

UNIT III

Levels of Testing:

The need for Levels of Testing, Unit Test, Unit Test Planning, Designing the Unit Tests, The Test Harness, Running the Unit tests and Recording results, Integration tests, Designing Integration Tests, Integration Test Planning, Scenario testing, Defect bash elimination System Testing, Acceptance testing, Performance testing, Regression Testing, Internationalization testing, Ad-hoc testing, Alpha Beta Tests, Testing OO systems, Usability and Accessibility testing, Configuration testing, Compatibility testing, Testing the documentation, Website testing.

UNIT IV

Test Management:

People and organizational issues in testing, Organization structures for testing teams, Testing services, Test Planning, Test Plan Components, Test Plan Attachments, Locating Test Items, Test management, Test process, Reporting Test Results, Introducing the test specialist, Skills needed by a test specialist, Building a Testing Group, The Structure of Testing Group, The Technical Training Program.

UNIT V

Test Automation:

Software test automation, skills needed for automation, Scope of automation, Design and architecture for automation, Requirements for a test tool, Challenges in automation, Test metrics and measurements – project- progress and productivity metrics.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Identify suitable tests to be carried out
- CO2: Design test cases suitable for a software development for different domains
- CO3: Prepare test planning based on the document
- CO4: Document test plans and test cases designed
- CO5: Apply automatic testing tools
- CO6: Develop and validate a test plan

Textbooks:

1. Srinivasan Desikan, Gopaldaswamy Ramesh, “Software Testing: Principles and Practices”, Pearson Education, 2006.
2. Ron Patton, “Software Testing”, Second Edition, Second Edition, Sams

Publishing, 2007.

Reference Books:

1. Ilene Burnstein, “Practical Software Testing”, Springer International Edition, 2003.
2. Edward Kit, “Software Testing in the Real World – Improving the Process”, O’Reilly(Sams), 1995.
3. Boris Beizer, “Software Testing Techniques”, Second Edition, Wiley, 1990.
4. Aditya P. Mathur, “Foundations of Software Testing Fundamental Algorithms and Techniques”, Dorling Kindersley (India) Pvt. Ltd., Pearson Education, 2008

Course Title	Nature Inspired Computing
Course Code (Credit)	CS40002 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To gain knowledge on present and future computing paradigm changes with examples found in the real world
- To design of various computing models using cellular automata, biological and quantum computing.
- To be able to explain the application of NIC for solving real world problem.

Course Contents:

UNIT I

Introduction to NIC Computers:

Computing paradigms inspired by nature, Cellular automata, biological computers, quantum computers, neural networks and molecular computing.

UNIT II

Nature Inspired Computing for Problem-Solving:

Artificial neural networks, Artificial immune systems, Swarm intelligence; Evolutionary algorithms, Ant colony optimization, Particle swarm optimization; Diffusion search

UNIT III

Nature Inspired Computing for Modeling:

Artificial life like forms and behaviour, Creative evolutionary art, Foraging and satisfying, Autonomous self-organizing systems, Competition and cooperation, Collective/crowd behaviour, Social trend and consensus.

UNIT IV

Immunocomputing:

Introduction, Immune System, Physiology and main components, Pattern Recognition and Binding , Immune Network Theory, Danger Theory, Evaluation Interaction, Immune

Algorithms , Introduction, Genetic algorithms, Bone Marrow Models , Forest's Algorithm, Artificial Immune Networks

UNIT V

Computing With New Natural Materials:

DNA Computing: Motivation, DNA Molecule , Adleman's experiment , Test tube programming language, Universal DNA Computers , PAM Model, Splicing Systems, Lipton's Solution to SAT Problem , Scope of DNA Computing , From Classical to DNA Computing

Course Outcomes:

Upon successful completion of this course, students should be able to:

CO1: Identify the needs for present and future computing paradigm changes with examples found in the real world

CO2: Formulate and implement the nature-inspired computing (NIC) approaches in the contexts of problem-solving and modeling.

CO3: Design of various computing model and use of cellular automata, biological and quantum computing.

CO4: Explain the application of NIC for solving real world problem.

CO5: Describe the nature and characteristics of case study problems or applications

CO6: Recommend new NIC methods and their general applicability to solve the critical problems.

3. Albert Y.Zomaya, "Handbook of Nature-Inspired and Innovative Computing", Springer, 2006.

Course Title	Augmented and Virtual Reality
Course Code (Credit)	CS40010 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS30015

Course Objectives:

- To know basic concepts of virtual reality
- To understand visual computation in computer graphics
- To understand interaction between system and computer
- To know application of VR in Digital Entertainment
- To know basic concepts of augmented reality

Course Contents:**UNIT I:****Introduction of Virtual Reality:**

Fundamental Concept and Components of Virtual Reality, Primary Features and Present Development on Virtual Reality, Multiple Models of Input and Output Interface in Virtual Reality: Input, Tracker, Sensor, Digital Glove, Movement Capture, Video-based Input, 3D Menus & 3DScanner, Output, Visual /Auditory / Haptic Devices.

UNIT II:**Visual Computation in Virtual Reality:**

Fundamentals of Computer Graphics, Software and Hardware Technology on Stereoscopic Display, Advanced Techniques in CG: Management of Large Scale Environments & Real Time Rendering.

UNIT III:**Interactive Techniques in Virtual Reality:**

Body Track, Hand Gesture, 3D Manus, Object Grasp.

Development Tools and Frameworks in Virtual Reality: Frameworks of Software Development Tools in VR. X3D Standard; Vega, MultiGen, Virtools.

UNIT IV:**Application of VR in Digital Entertainment:**

VR Technology in Film & TV Production, VR Technology in Physical Exercises and Games, Demonstration of Digital Entertainment by VR.

UNIT V:

Augmented and Mixed Reality: Taxonomy, Technology and features of augmented reality, Difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, Visualization techniques for augmented reality, Wireless displays in educational augmented reality applications, Mobile projection interfaces, Marker-less tracking for augmented reality, Enhancing interactivity in AR environments, Evaluating AR systems.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Discuss the fundamentals and I/O components of the augmented and virtual reality system
- CO2: Evaluate different computing architectures for virtual reality
- CO3: Provide opportunity to explore the research issues in Augmented Reality and Virtual Reality (AR & VR)
- CO4: Apply the different modeling concepts to visual virtualization
- CO5: Explore the role of virtual reality in traditional & emerging applications
- CO6: Develop prototypes using the concepts for virtual reality

Textbooks:

1. Burdea, G. C., P. Coffet., “Virtual Reality Technology”, Second Edition, Wiley-IEEE Press, 2003/2006.
- 2 Alan B. Craig, “Understanding Augmented Reality, Concepts and Applications”, Morgan Kaufmann, 2013.

Reference Books:

1. Alan Craig, William Sherman, Jeffrey Will, “Developing Virtual Reality Applications, Foundations of Effective Design”, Morgan Kaufmann, 2009.

Course Title	Social Network Analysis
Course Code (Credit)	CS40008 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- Recognize the concept of semantic web and related applications
- Employ learn knowledge representation using ontology
- Recognize human behavior in social web and related communities
- Sketch and learn visualization of social networks
- Investigate variety of descriptive measures for networks and software to calculate them

Course Contents:

UNIT I

Introduction:

Introduction to Semantic Web: Limitations of current Web, Development of Semantic Web, Emergence of the Social Web, Social Network analysis: Development of Social Network Analysis, Key concepts and measures in network analysis, Electronic sources for network analysis: Electronic discussion networks, Blogs and online communities, Web-based networks, Applications of Social Network Analysis.

UNIT II

Modelling, Aggregating and Knowledge Presentation:

Ontology and their role in the Semantic Web: Ontology-based knowledge Representation, Ontology languages for the Semantic Web: Resource Description Framework, Web Ontology Language, Modelling and aggregating social network data: State-of-the-art in network data representation, Ontological representation of social individuals, Ontological representation of social relationships, Aggregating and reasoning with social network data, Advanced representations.

UNIT III

Extraction and Mining Communities in Web Social Networks:

Extracting evolution of Web Community from a Series of Web Archive, Detecting communities in social networks, Definition of community, Evaluating communities, Methods for community detection and mining, Applications of community mining algorithms, Tools for detecting communities, social network infrastructures and communities, Decentralized online social networks, Multi-Relational characterization of dynamic social network communities.

UNIT IV

Predicting Human Behavior and Privacy Issues:

Understanding and predicting human behavior for social communities, User data management, Inference and Distribution, Enabling new human experiences, Reality mining, Context, Awareness, Privacy in online social networks, Trust in online environment, Trust models based on subjective logic, Trust network analysis, Trust transitivity analysis, Combining trust and reputation, Trust derivation based on trust comparisons, Attack spectrum and counter measures.

UNIT V

Visualization and Applications of Social Networks:

Graph theory, Centrality, Clustering, Node-Edge Diagrams, Matrix representation, Visualizing online social networks, Visualizing social networks with matrix-based representations, Matrix and Node-Link Diagrams, Hybrid representations, Applications, Cover networks, Community welfare, Collaboration networks, Co- Citation networks.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Develop semantic web related applications

CO2: Describe and Represent knowledge using ontology

CO3: Recognize human behavior in social web and related communities

CO4: Inspect and Predict human behavior in social web and related communities

CO5: Organize and Visualize social networks

CO6: Analyze tools for detecting communities social network infrastructures

Textbooks:

1. Peter Mika, “Social Networks and the Semantic Web”, First Edition, Springer 2007.
2. Borko Furht, “Handbook of Social Network Technologies and Applications”, First Edition, Springer, 2010.

Reference Books:

2. Dion Goh, Schubert Foo, “Social information Retrieval Systems: Emerging Technologies and Applications for Searching the Web Effectively”, IGI Global Snippet, 2008.
3. Max Chevalier, Christine Julien, Chantal Soulé-Dupuy, “Collaborative and Social Information Retrieval and Access: Techniques for Improved User Modelling”, IGI Global Snippet, 2009.

PROGRAMME LABORATORY COURSES

Course Title	Data Structures Laboratory
Course Code (Credit)	CS29001 (L-T-P-Cr: 0-0-2-1)

Course Objectives:

- To understand the practical application of linear and nonlinear data structures
- To introduce and practice advanced algorithms, programming techniques
- To write modules for developing sophisticated computer application programs

Topics Covered:

1. Problems in C/C++ using data structures involving arrays, stacks, queues, strings, linked lists, trees, graphs.
2. Operations on stacks, queues and linked lists.
3. Applications of stack, Conversion of infix expressions to postfix and evaluation of postfix expressions.
4. Application of linked lists – Singly, Doubly.
5. Implementation of priority queue.
6. Implementation of Binary Tree, Binary Search Tree, AVL Trees.
7. Implementation of BFS, DFS – Application of stack, queues.
8. Implementation of Sorting Techniques.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Apply and implement the learned algorithm for problem solving
- CO2: Identify the data structure to develop program for real time applications
- CO3: Design and develop optimal algorithms using appropriate data structures
- CO4: Implementation of priority queue for optimal algorithms
- CO5: Implement Binary Tree, Binary Search Tree, AVL Trees for problem solving
- CO6: Implement sorting techniques for real time applications

Reference Book:

1. Aaron M. Tenenbaum, Yedidyah Langsam, Moshe J. Augenstein “Data Structures using C”, Third Edition, Pearson Education, 2007.

Course Title	Digital Systems Design Laboratory
Course Code (Credit)	EC29005 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Students will be able to gain knowledge and investigate different basic digital circuits to apply in practical digital system design. They will gain knowledge about verilog HDL and how to simulate the digital circuit of both combinational and sequential logic circuits using verilog HDL.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Students will be able to gain knowledge about Verilog HDL and also able to design and simulate various boolean functions.
- CO2: Students will be able to simulate and design adder and parallel binary adder.
- CO3: Students will be able to simulate and design combinational logic circuits like decoder and Multiplexer.
- CO4: Students will be able to simulate and design sequential logic circuits like Synchronous type counter and Asynchronous type counters.
- CO5: Students will be able to simulate and design sequential logic circuits using shift registers.
- CO6: Students will be able to simulate and design synchronous sequential circuit using concept of finite state machine.

Course Title	Operating Systems Laboratory
Course Code (Credit)	CS29002 (L-T-P-Cr: 0-0-2-1)
Pre-requisites	CS20002

Course Objectives:

- To understand the concept of Operating System
- To have insight knowledge on different system calls and Unix Utilities
- To experience the practical side of the functioning of various blocks in OS
- To design a real world application by considering process synchronization, Memory management

List of Experiments:

1. Hands on Unix Commands.
2. Shell programming for file handling.
3. Shell Script programming using the commands grep, awk, and sed.
4. Programs on Multithread using P-thread.
5. Implementation of CPU scheduling algorithms.
6. Implementation of Synchronization problems using Semaphores, Message Queues and Shared Memory.
7. Implementation of Memory Management, Allocation, Placement and replacement Algorithms.
8. Implementation of various Disk scheduling algorithms.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Experiment on shell script and P-thread
- CO2: Solve synchronization problems
- CO3: Develop programs for CPU scheduling, Memory allocation policy
- CO4: Devise algorithm for deadlock avoidance
- CO5: Implement memory management techniques
- CO6: Implement various disk scheduling algorithms

Reference Books:

1. Silberschatz, Galvin, Gagne, "Operating System Concepts", Ninth Edition, Wiley , 2013.
2. William Stallings, "Operating Systems – Internals and Design Principles", Nineth Edition, Pearson Publications, 2014.
3. Behrouz A. Forouzan, and Richard F. Gilberg, "UNIX and Shell Programming", Cengage Learning, 2003.

4. Andrew S. Tanenbaum, “Modern Operating Systems”, Fourth Edition, Pearson Publications, 2014.

Course Title	Java Programming Laboratory
Course Code (Credit)	CS29004 (L-T-P-Cr: 0-0-2-1)

Course Objectives:

- To impart hands on experience with java programming.
- To learn basic object oriented programming concepts
- To write programs using abstract classes, interfaces and packages
- To handle errors using exception handling technique
- To be able to write program using string and I/O classes.
- To write GUI programs using swing controls in Java.

List of Experiments:

1. Write a class file – box with three data members(length, width, height) and a method volume() . Also implement the application class Demo where an object of the box class is created with user entered dimensions and volume is printed.
2. Write a program to overload addition method with various parameters in a class in Java
3. Write a program which will overload the area () method and display the area of a circle, triangle and square as per user choice and user entered dimensions.
4. A plastic manufacturer sells plastic in different shapes like 2D sheet and 3D box. The cost of sheet is Rs 40/ per square ft. and the cost of box is Rs 60/ per cubic ft. Implement it in Java to calculate the cost of plastic as per the dimensions given by the user where 3D inherits from 2D.
5. Illustrate the execution of constructors in multi-level inheritance with three Java classes – plate(length, width), box(length, width, height), wood box (length, width, height, thick).
6. Write a program in java to define a class Shape which has a data member ‘area’ and a member function showArea(). Derive two classes Circle and Rectangle from Shape class. Add appropriate data members and member functions to calculate and display the area of Circle and Rectangle.
7. Write a program to create an Account class containing acc_no, balance as data members and disp() to display the details. Write another class Person which inherits all the members of Account class and it has additional data

members such as pname and aadharno. Also it overrides disp() method. Write the driver class to display the method overriding technique.

8. Illustrate the usage of abstract class with following Java classes-
 - i) An abstract class 'student' with data members as roll no, reg no and an abstract method course()
 - ii) A subclass 'kiitian' with course() method implementation
9. Define an interface Motor with a data member –capacity and two methods such as run() and consume(). Define a Java class 'Washing machine' which implements this interface and write the code to check the value of the interface data member thru an object of the class.
10. Define an interface with three methods – earnings(), deductions() and bonus() and define a Java class 'Manager' which uses this interface without implementing bonus() method. Also define another Java class 'Substaff' which extends from 'Manager' class and implements bonus() method. Write the complete program to find out earnings, deduction and bonus of a sbstaff with basic salary amount entered by the user as per the following guidelines –

earnings → basic + DA (80% of basic) + HRA (15% of basic)

deduction PF → 12% of basic

bonus → 50% of basic

11. Define two packages as – General and Marketing. In General package define a class 'employee' with data members as empid(protected), ename(private) and a public method as earnings() which calculate total earnings as

Earnings, > basic + DA (80% of basic) + HRA (15% of basic)

In Marketing package define a class 'sales' which is extending from 'employee' class and has a method allowance() which calculates Travelling Allowance as 5% of total earning. Write the programs to find out total earning of a sales person for the given basic salary amount and print along with the emp id.

12. Write a program to perform following operations on user entered strings –
 - i) Change the case of the string
 - ii) Reverse the string
 - iii) Compare two strings
 - iv) Insert one string into another string

13. Write a Java program to generate an Array Index Out of Bounds Exception and handle it using catch statement.
14. Write a Java class which has a method called Process Input(). This method checks the number entered by the user. If the entered number is negative then throw an user defined exception called Negative Number Exception, otherwise it displays the double value of the entered number.
15. Create an user defined exception named Check Argument to check the number of arguments passed through command line. If the number of arguments is less than four, throw the Check Argument exception, else print the addition of squares of all the four numbers.
16. Design a user registration form using different controls of Swing package.
17. Design a calculator using Swing package as shown below.

18. Design a graphical user interface which consists of two buttons named as RED and BLUE. When the user clicks RED button, a message “you have passed RED” will be displayed in the window. Similarly when the user clicks BLUE button, a message “you have pressed BLUE” will be displayed in the window.
19. Write a program in Java to copy the content of a given file to another user entered file using character stream.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Run java programs using java compiler
- CO2: Write java programs using basic object oriented programming concepts
- CO3: Write programs using abstract classes interfaces and packages
- CO4: Write java program using multi-threading and exception handling

CO5: Design Java application using String and I/O classes

CO6: Design GUI application using Swing and interactive application using event handling and JDBC

Reference Books :

1. Java-The Complete Reference, Herbert Schildt, 10th Edition, McGraw Hill Education, 2014
2. Introduction to JAVA Programming, Y.Daniel Liang, 10th Edition, Pearson Education, 2007

Course Title	Database Management Systems Laboratory
Course Code (Credit)	CS29006 (L-T-P-Cr: 0-0-2-1)
Pre-requisites	CS20006

Course Objectives

- To explore the features of a Database Management Systems
- To interface a database with front end tools
- To understand the internals of a database system
- To identify Structure Query Language statements used in creation and manipulation of Database
- To identify the methodology of conceptual modeling through Entity Relationship model

List of Experiments

1. Working with DDL, DML and DCL.
2. Inbuilt functions in RDBMS.
3. Nested Queries & Join Queries.
4. Set operators & Views in SQL.
5. Control structures.
6. Working with cursors and exception handling
7. Working with Procedures and Functions.
8. Triggers.
9. Dynamic & Embedded SQL.
10. Database Design and implementation (Mini Project).
11. Working with XML*.
12. Forms & Reports*.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Identify Structure Query Language statements used in creation and manipulation of Database

- CO2: Use databases for building client server applications
 CO3: Comprehend the internal working of a database system
 CO4: Design and develop a database using SQL and the mechanism in connecting with a Web based GUI
 CO5: Analyze and design a real database application
 CO6: Evaluate the efficiency of the database design for real time applications.

Reference Books:

1. Silberschatz, Henry F. Korth, S. Sudharshan, “Database System Concepts”, Seventh Edition, McGraw Hill, 2006.
2. C. J. Date, A. Kannan, S. Swamynathan, “An Introduction to Database Systems”, Eighth Edition, Pearson Education, 2006.

Course Title	Algorithms Laboratory
Course Code (Credit)	CS39001 (L-T-P-Cr: 0-0-2-1)
Pre-requisites	CS21001

Course Objectives:

- To learn how to analyze the complexity of algorithms
- To compare and evaluate algorithms in terms of time and space complexity
- To program brute force, divide and conquer, decrease and conquer, transform and conquer, greedy, and dynamic techniques

List of Experiments:

1. Estimating worst-case/average-case complexity of algorithms via programs.
2. Determining machine constants.
3. Programs involving some advanced data structures.
4. Implementing example problems.
5. Illustrating the different paradigms of algorithm design.
6. Solving miscellaneous problems e.g. problems in string manipulation, graph theory, optimization.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Solve and analyze general algorithms based on space and time complexity

- CO2: Implement and empirically compare fundamental algorithms and data structures to real-world problems
- CO3: Design, develop, and optimize algorithms in different paradigms
- CO4: Implement problems in string manipulation
- CO5: Develop solutions using graph theory
- CO6: Evaluate optimization techniques for real-world problems

Reference Books:

1. H. S. Wilf, “Algorithms and Complexity”, CRC Press.

Course Title	Computer Networks Laboratory
Course Code (Credit)	CS39003 (L-T-P-Cr: 0-0-2-1)
Pre-requisites	CS30003

Course Objectives:

- To create client and server applications using the "Sockets" API and the implementation of Data link layer protocol and TCP layer
- To conduct computer communication network simulations
- To have a hands on experience of computer network simulation and modelling techniques using NS-3 simulation software

List of Experiments

1. Exercises on Socket Programming using C and Java
2. Exercises using NS-3 Network Simulator
 - a. Basics of Network Simulation
 - Introduction , Platform required to run network simulator, Backend Environment of Network Simulator, Agents and applications, Tracing
 - b. Simulating a Local Area Network
 - Local Area Network, LAN Topologies, MAC Protocol, Taking turns, Ethernet, Ethernet Frame Structure, Ethernet Versions, Simulating a LAN using Network Simulator3
 - Implementation of various MAC protocols
 - Setting up of various network topologies
 - Measurement of routing protocols

c. Measuring Network Performance

- Network Performance Evaluation, Performance Evaluation Metrics, Parameters Affecting the Performance of Networks, Performance Evaluation Techniques, Network Performance Evaluation using NS-3
- Setting up of network that carries various application protocols and analyzing the performances

3. Hands on experiments on Network equipments

- a. Switches, Routers
- b. Hardware firewall

Course Outcomes:

Upon completion of the course, the students will be able to:

CO1: Invoke analytical studies of Computer Networks through network simulation

CO2: Design a network using NS-3 toolkit and its importance in designing a real network

CO3: Measure and analyze the network parameters for a high throughput network

CO4: Practice experiments on Network Equipments

CO5: Evaluate Network Performance Evaluation using NS-3

CO6: Build experiments on Network equipments

Reference Books:

1. W. Richard Stevens, “UNIX Network Programming – Networking APIs: Sockets and XTI”, Vol. 1, Second Edition, Prentice Hall, 1998.
2. Eitan Altman, Tania Jimenez, “NS Simulator for Beginners”, Morgan & Claypool Publishers, 2011.

Course Title	Advance Programming Laboratory
Course Code (Credit)	CS39006 (L-T-P-Cr: 2-0-0-2)

Course Objectives:

- Explore and understand how to use the R documentation
- Expand R by installing R packages
- Read Structured Data into R from various sources

- Understand the different data types and structures in R
- Using R for mathematical operations
- Use of vectorized and matrix calculations
- Write user-defined and looping constructs R functions
- Reshape data to support different analyses

LIST OF EXPERIEMENTS:

1. Download and install R-Programming environment and install basic packages using `install.packages()` command in R.
2. Learn all the basics of R-Programming (Data types, Variables, Operators etc.)
3. Implement R-Loops with different examples.
4. Learn the basics of functions in R and implement with examples.
5. Implement data frames in R.
6. Implement different String Manipulation functions in R.
7. Implement different data structures in R (Vectors, Lists, Data Frames)
8. Write a program to read a csv file and analyze the data in the file in R
9. Create pie charts and bar charts using R.
10. Create a data set and do statistical analysis on the data using R.

Course Outcomes

Upon completion of this course, the students will be able to:

CO1: Install, configure and install different packages in R.

CO2: Import and export files.

CO3: Make use of different data structures.

Perform mathematical operations.

Perform operations for different data types.

Perform analysis of data in different perspective.

Reference Book:

1. Jared P. Lander, R for Everyone: Advanced Analytics and Graphics, Second Edition, Pearson Education, 2018.

Course Title	Internship
Course Code (Credit)	CS48001 (L-T-P-Cr: 2-0-0-2)

Course Objective:

In this course, the students will get opportunity to explore career augmentation aspects prior to graduation, integrate theory and practice, assess interests and abilities in their field of study, learn to appreciate work and its function in the economy, develop work habits and attitudes necessary for job success, develop communication, interpersonal and other critical skills in the job interview process and build a record of work experience.

Course Outcomes:

On completion of the internship, the students will be able to

CO1: apply engineering knowledge in solving real-life problems

CO2: acquire new skills in the engineering disciplines of their own interest

CO3: get exposure to real-life-working environment practices, and to attain the professionalisms

CO4: work with multi-tasking professionals and multidisciplinary team

CO5: prepare a technical report, to improve presentation and other soft skills

CO6: learn to appreciate work and its function in the economy

Course Title	MINI PROJECT
Course Code (Credit)	CS37001 (L-T-P-Cr: 0-0-4-2)

Course Objective:

- Students are required to undertake a **mini** project either as an individual or in a group in consultation with the project supervisor which may be completed in one semester.
- The project work is aligned with the discipline of the student and its allied areas. It is preferably related to certain research objective or advanced technical domain.
- Students will demonstrate higher level learning outcomes and cognitive skills in the implementation of the project.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: perform a background study on certain technical aspect and formulate a project objective

CO2: outline a pathway for the implementation of the project within the time line

CO3: apply fundamental engineering concepts, advanced technical know-how, use modern engineering tools, perform experiments and critically analyze the data

CO4: provide engineering solutions, design system components or processes with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

CO5: function effectively as an individual, and as a member or leader in a team under Multidisciplinary settings following ethical practices

CO6: communicate effectively with a range of audiences and prepare technical reports

Course Title	Project – I / Research Project -I
Course Code (Credit)	CS47001 (L-T-P-Cr: 0-0-10-5)

Course Objective:

Students are required to undertake a final year major project either as an individual or in a group in consultation with the project guide which may be completed in one year. The project should be related to certain advanced technical domain. The work encompasses two semesters and to be carried out in two phases. In Project-I, students are expected to complete detailed literature review, identify their objective and start working on the same; perform experiments, carry out analyses and report their findings to their supervisors and the panel.

Course Outcomes:

Upon completion of this course, the students will be able to

CO1: conduct a detailed research survey or background study and summarize the theory and findings

CO2: formulate a research question or a general objective of the project

CO3: propose and outline the solution to the research question or a pathway for the implementation of the project with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

CO4: conduct appropriate experimentation, analyze and interpret data, and use engineering judgment to draw conclusions

CO5: function effectively as an individual, and as a member or leader in a team under

Multidisciplinary settings following ethical practices

CO6: communicate effectively with a range of audiences and prepare technical reports.

Course Title	Project – II/ Research Project-II
Course Code (Credit)	CS47002 (L-T-P-Cr: 0-0-18-9)

Course Objective:

Project-II is a continuation of Project-I, the second phase of final year major project. Students should complete all related experiments, develop a final solution, product or system and validate the applicability of the same under real time scenario with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors. They produce a

detailed technical report on their work as well as individual contribution reports. Throughout the implementation of the major final year project, students should demonstrate all cognitive skills and attainment of all program outcomes and student outcomes.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: readily apply fundamental concepts in their area of study for executing the projects

CO2: demonstrate skill in using modern technical tools, apply advanced technical knowledge integrate information from different sources, perform complex experiments and critically analyze the findings to draw conclusions

CO3: provide engineering solutions to predefined research question or project objective, design system components or processes with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors

CO4: function effectively as an individual, and as a member or leader in a team under multidisciplinary settings following ethical practices

CO5: communicate effectively with a range of audiences and prepare detailed technical reports

CO6: demonstrate knowledge and understanding of the management principles in executing their project as a member or leader of the team, and willingness to engage in life-long learning.

Course Title	Web Design
Course Code (Credit)	CS28001 (L-T-P-Cr: 0-0-1-1)

Course Objectives:

Web design and programming is a large field, with different types of technologies implemented by different tools. HTML, CSS, and JavaScript are known to be the three pillars of client-side web programming. After finishing this course, a student should be prepared to write nicely formatted, interactive web pages, with no dependencies on server-side technologies.

Course Contents:

UNIT I

HTML Fundamentals

HTML: Structure of a program, various tags and their roles in HTML programs,
Lists: ordered, unordered, definition, Table

UNIT II

More with HTML

Form design, Frames, link and its types, Images

UNIT III

CSS Essentials

Style sheets: Inline, Internal, External

UNIT IV

JavaScript Basics

Introduction, characteristics, Variables, Data types, Type casting and conversion Functions. Primitives, operators, Control statements, Array, Function, Function – Parameter Passing and dynamic argument and return statement

UNIT V

More with JavaScript

DOM - browser, window, document, image and form object, Properties and Methods of different objects, Predefined Java Script Object - Array, String and Date Object and their methods, Event handling – Link, Body, Image and events associated with different HTML tags

Course Outcome:

Upon completion of this course, the students will be able to:

CO2: Understand the basics of web page design.

CO3: Use formatting instructions of HTML.

CO4: Apply the style formats using CSS.

CO5: Write basic scripts using JavaScript.

CO6: Apply DOM in web pages.

CO7: Create dynamic web pages using HTML and JavaScript.

Textbooks:

1. MASTERING HTML, CSS & Java Script Web Publishing, Laura Lemay, Rafe Colburn and Jennifer Kyrnin, BPB Publications.

Reference Books:

1. HTML, CSS and JavaScript All in One, Sams Teach Yourself, Julie C. Meloni and Jennifer Kyrnin, Pearson Education.
2. HTML 5 Black Book, DT Editorial Services, Dreamtech Press.

Course Title	Organizational Behaviour
Course Code (Credit)	HS20220 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This course shall guide the students to learn the basic concepts of Organizational Behaviour and its applications in contemporary organizations. Further, it help them to describe how people behave under different conditions and understand why people behave as they do. The students would be in a position to synthesize related information and evaluate options for the most logical and optimal solution such that they would be able to predict and control human behaviour and improve results. Lastly, this course would help the students to understand how individual, groups and structure have impacts on the organizational effectiveness and efficiency.

Course Contents:

UNIT I

Introduction to Organizational Behaviour:

Organizational Behaviour- nature and scope; Need for studying OB; contributing disciplines to OB; evolution of OB; OB approaches and models; OB opportunities and disruptions

UNIT II

Individual Perspective:

Introduction to Individual behaviour; Personality- concept, determinants, types and theories/models; Personality and OB; Perception- meaning, perceptual process, factors affecting perception; perception and its application in OB; Attitude- nature, components, formation and types; Values- concepts, types and formation; attitude, values and behaviour

UNIT III

Individual Perspective:

Learning- meaning, determinants, theories and principles; learning and behaviour; Motivation- nature, importance, process and theories; managerial implication of motivation- job design, quality of work life and employee engagement; organizational citizenship behaviour- meaning, theoretical perspective, determinants and predictors

UNIT IV

Group Perspective:

Foundation of group behaviour; meaning and characteristics of group; why do people form and join groups; types and groups; stages of group development; group decision making; Team building- meaning and types of team; team building process; Meaning, sources and types of conflict; conflict management and negotiation strategies; Leadership- meaning and importance; differentiating between leader and manager; leadership styles; leadership theories

UNIT V

Organizational Perspective:

Organizational structure- meaning and elements; Organizational culture- meaning, types and functions of culture; creating, sustaining and changing a culture; Organizational change- meaning and need; ; managing resistance to change; Organizational development- meaning, objectives, models and interventions

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Know about organization, organizational behaviour, it's nature, scope and significance,
- CO2 : Develop their personality as per industry requirement,
- CO3 : Apply motivational techniques to make the employees work with confidence and satisfaction,
- CO4 : Develop different leadership styles to adjust themselves in different organizational situations,
- CO5 : Improve the knowledge of group behaviour and techniques of group decision making, and
- CO6 : Apply the concepts for managing changes in organization as well as the development of an organization's human resources.

Textbooks:

1. Dr. S..S. Khanka, Organizational behaviour texts and cases Sultan Chand, OB text and cases S.S. Khanka, S chand, 2022
2. Stephen P. Robbins, Timothy A. Judg, Neharika Vohra Organizational Behaviour, Pearson, 18th edition, 2018

Reference Books:

1. Fiona M. Wilson, Organizational Behaviour and Work Oxford University Press, 2014
2. K. Aswathappa , Organizational Behaviour, , Himalaya Publishing House, 2013

Course Title	Economics Of Development
Course Code (Credit)	HS20120 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of this course is to provide students with the essential tools and concepts of development economics, to prepare them to understand what makes underdevelopment persist and what helps development succeed. Students will explore diverse dimension and measures of development, as well as the application of microeconomic analysis to issues of development in poor countries, including the study of household decisions and the analysis of institutions and norms influencing development. And To enhance students understanding of the SDGs to create a better- informed citizenry, which will lead to a more sustainable action by all and for all.

Course Contents:

UNIT I

Economic Growth and Development:

Meaning of development and Economic growth, Characteristics of less developed countries. Factors in Economic development, Measuring development and development gap — per capita income, inequality of income and wealth, Gini coefficient, Human Development Index, Physical Quality of Life Index, and other indices of development.

UNIT II

Theories of Economic Growth and Development:

Theories of Economic Development: Classical (Smith, Ricardo, Malthus), Marxian – Theory of Social change, immutable laws, Crisis in capitalism, Schumpeter and capitalist development, Rostow's stages of growth. Partial theories of growth and development: Vicious circle of Poverty, Big push, balanced growth, unbalanced growth,

UNIT III

International aspects of Economic Development:

International trade as an engine of growth; Static and dynamic gains from trade; Prebisch, Singer and Myrdal theses vs. free trade; Export-led growth; Tariffs and effective protection; WTO and developing countries. External resources; FDI; Aid vs. trade;

UNIT IV

Development and Environment:

Economy linkage; Environment as a necessity and luxury; Population environment linkage. Allocation problem; Market failure for environmental goods; environment as a public good.

UNIT V

Sustainable Development:

Concept and indicators of sustainable development. Common Property Resources, Property right approach to environmental problem-property rights approach, property rights and environmental problems, Externalities and Pigovian tax, Coase theorem, Coase theorem and transaction cost. Prevention, control and abatement of pollution.

Course Outcome:

Upon completion of this course, the students will be able to:

- CO1: Understand key factors and issues in the process of economic development.
- CO2: Enhance their ability in applying economic models to study development Problems,
- CO3: Learning the role of the three basic components of ecosystems and environment and underlying causes of their degradation,
- CO4: Understand the policy scenario and the existing environmental conventions/ regulations/ laws,
- CO5: Development of sustainable planning for sustainable development of environment, economy and firms, and
- CO6: select and apply appropriate economic techniques to solve environmental problems and measure the value of environmental goods.

Textbooks:

1. S.Ghatak, An Introduction to Development Economics, Allen and Unwin, London,2003
2. Kindleberger, C. P. Economic Development, McGraw Hill, New York, 1958
3. Todaro, M. P. Economic Development, Longman, London.

References Books:

1. Thirwal, A. P. Growth and Development, Macmillan, U. K,2017
2. Adelman, I. Theories of Economic Growth and Development. Stanford University Press, Stanford, 1966
3. Chenery, H. and T.N. Srinivasan (Eds) Handbook of Development Economics, Vols 1 & 2 Elsevier, Amsterdam, 2002
4. Myint, H. Economic Theory and Underdeveloped Countries, Oxford University Press, New York,1971

Course Title	International Economic Cooperation
Course Code (Credit)	HS20122 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This course's overarching objective is to equip students with knowledge of both the theoretical concepts and the actual procedures involved in international trade. The specific purpose is to increase the knowledge of importing and exporting essentials and to offer the with the skills for understanding the international trading process.

Course Contents:

UNIT I

Theories of International Trade

Classical Theories of International Trade- Mercantilism, Absolute Advantage, Comparative advantage Theory, Gains from international trade; Terms of trade; Theory of Reciprocal Demand; Modern Theories of International Trade- Heckscher-Ohlin theory

UNIT II

Free Trade, Protection and Balance of Payment

Free trade and protection in developing countries; Forms, methods and effects of protection; Introduction of BoP; Structure of BoP; Disequilibrium in BoP; Measures to overcome disequilibrium in BoP., Tariff; Trade creation vs Trade diversion.

UNIT III

International Organizations:

International Monetary Fund; World Trade Organisation; Regional Trade Agreements; Trade Blocs.

UNIT IV

Foreign Exchange:

Foreign Exchange Market; Theories of foreign exchange; Factors affecting exchange rate; Fixed and flexible exchange rate; FERA and FEMA.

UNIT V

EXIM Policies

Recent budgetary policies and programs relating to inequality; Analysis of Economic Survey data.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Learn theories of international trade,
- CO2 : Understand free trade, protection, and BOP,
- CO3 : Analyse the role of international organisations,
- CO4 : Understand the working of foreign exchange,

CO5 : Study the EXIM policies, and

CO6 : Analyse secondary data relating to international trade.

2. Paul R. Krugman, Maurice Obstfeld, Marc Melitz, *International Trade: Theory and Policy*, 2017, ISBN-10 : 9789332585768 ISBN-13 : 978-9332585768

Course Title	Business Ethics And Corporate Governance
Course Code (Credit)	HS30223 (L-T-P-Cr: 3-0-0-3)

Course objective:

This course focuses upon the fundamental principles and standards that should govern the business organizations. The objective of this paper is to make the students aware about the importance of ethics, corporate governance and role of CSR & sustainable development goals in the business to encourage moral practices and sensitivity towards the ethical dimension of managerial problems.

Course Contents:

UNIT I

Business Ethics: Concept, Principles & Theories:

Meaning, objective and types of Ethics; Business ethics- concept, need, scope, objectives and importance; factors influencing business ethics; Principles of Business ethics; Relationship between ethics and business ethics; theories of business ethics; Ethical dilemma and ethical decision making

UNIT II

Ethics in Practice across the domain:

Ethics in marketing- introduction, ethical dilemma in marketing, unethical marketing practices, measures to stop unethical practices in marketing; Ethics in Finance- introduction, code of ethics in finance, unethical practices in finance or frauds, measures to stop unethical practices in finance; Ethics in HRM- introduction, ethical issues in HRM (job discrimination, sexual harassment,

employee privacy, whistle blowing, affirmative action); importance of workplace ethics and employee code of conduct

UNIT III

Corporate Governance:

Corporate Governance- concept, objective and need. Role of law in corporate governance; important issues in corporate governance; Corporate governance in India-past, present and Future; Importance and principles of Corporate Governance

UNIT IV

Introduction to Corporate Social Responsibility:

CSR- Concept, evolution and development; Why CSR; Apprehensions against CSR; Forms and dimensions of CSR; making business corporations socially responsible; CSR in India

UNIT V

Sustainable Development:

Introduction, meaning, history, features, objectives of sustainable development; The pillars and principles of sustainable development; SDG and its relevance in business

Course Outcomes:

Upon completion of the Course, the Student will be able to

CO1: Familiarize the learners with the concept and relevance of Business Ethics in the modern era,

CO2: Understand the value of business ethics which will guide them in maintaining firm moral values while taking managerial decision,

CO3: Apply the ability to make moral judgments in dilemmatic situations across the work domains,

CO4: Analyse the application of management practices by adhering to corporate law and ethics,

CO5: Evaluate the scope, opportunity and complexity of Corporate Social responsibility in the global and Indian context

CO6: Create an opportunity to understand the sustainable development goals in maintaining a balance between the economic, environmental and social needs.

Textbooks:

1. Dr. K. Nirmala, Dr. B.A. Karunakara Reddy & N. Aruna Rani, Business Ethics and Corporate Governance, Himalaya Publication House
2. C.S.V. Murthy, Business Ethics and Corporate Governance, Himalaya Publishing, 2022

Reference Books:

1. Prabhakaran Paleri, Corporate Social Responsibility (concept, cases and trends Cengage Learning India Pvt. Limited, 2020
2. Dr. S.S. Khanka, Business Ethics and Corporate Governance, Sultan Chand, 2019
3. C.U. Saraf, Corporate Social Responsibility (CSR), Corporate Governance, Sustainable Development and Corporate Ethics/Business Ethics Himalaya Publishing House 2017.

Course Title	Leadership And Team Effectiveness
Course Code (Credit)	HS 30225 (L-T-P-Cr: 3-0-0-3)

Course Objective:

An effective leader understands the team dynamics, stimulates the morale of the followers and always aims at creating a participative workforce by enhancing team work. This course mainly focuses on individual, group and organization factors associated with leadership. There is a strong connection between emotional intelligence and leadership because the technical skills and knowledge will definitely help the students to fulfil the entry level requirements. Similarly, understanding employee empowerment would assist the students in acquiring the desirable professional skills.

Course Contents:

UNIT I

Leadership: concepts and practices:

Meaning, Definition and understanding of leadership; the role and functions of a leader; Differentiation between leadership and management; ; what makes a leader effective; characteristics of an effective leader; leadership in Indian organization

UNIT II

Leadership Perspectives:

Trait perspective of leadership (Great man theory and trait theory); Behavioural perspective of leadership (managerial grid and likert system - four management); Studies on leadership (Hawthorne, IOWA, Michigan and Ohio); Contingency perspective of leadership (fiedler's contency theory, path goal, hersey blanchard situational theory); contemporary perspective to leadership (transformational, transactional, charasmatic, servant and Nurturant-task leadership style)

UNIT III

Team effectiveness and Leadership:

Characteristics and types of teams; types and functions of group; Group vs team; understanding an effective team; who is a team leader; tuckman's team development stages; team development and team building; team meetings and leadership; team effectiveness leadership model; high-performance teams and leadership; team cohesiveness; common threats to groups

UNIT IV

Emotional Intelligence and Leadership:

What are emotions; Meaning, type and source of emotions; Concept and competencies of emotional intelligence; Elements of emotional intelligence; importance of EI; EI at workplace; Emotional intelligence and leadership; Significance of EI for leaders; strategies to enhance EQ in our jobs; EQ vs. IQ; developing EQ; obstacles to the development of EQ

UNIT V

Leadership and empowerment:

Employee empowerment- concept, need and importance; approaches to empowerment; advantages and disadvantages of empowerment; empowerment skills of a leader; empowering vs. Dis-empowering; leader as a coach (coaching skill); delegation (advantages and levels of delegation, steps and principles of effective delegation); empowering interpersonal skills

Course Outcomes:

Upon completion of the course, the students will be able to:

- CO1: Learn the characteristics and need of an effective leader,
- CO2: Understand the effectiveness of different leadership styles in different contexts from an instrumental, political and ethical perspective,
- CO3: Apply leadership theories to the real business scenario,
- CO4: Analyse group dynamics and importance of team work,
- CO5: Evaluate the ways to handle emotions and stress and manage work-life flexibility, and
- CO6: Create organizational environment that is psychologically safe and make the employees feel empowered.

Textbook:

1. Ranjana Mittal, Leadership Personal effectiveness and Team Building, Vikas Publishing House Pvt Ltd, 2015

Reference Book:

1. S. Bhargava and Gourav Bhargava, Team Building and Leadership Neelam Himalaya Publishing House, 2015

Course Title	Market Structure And Pricing Policie
Course Code (Credit)	HS30125 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Develop the ability for getting conceptual clarity about the various types of markets along with their functions and understand the pricing policy operations in the different markets.

Course Contents:

UNIT I

Cost and Revenue Analysis:

Concepts of cost (economic cost, production cost, real cost, opportunity cost, private & social cost), cost function, Output maximisation and cost minimisation, Derivation of cost function, traditional and modern theories of costs. Concepts of revenue (total, average, marginal revenue), relationship between TR, AR and MR.

UNIT II

Market Structures and Perfect Competition:

Meaning of market, characteristics of market, and types of market.

Perfectly competitive market and features, equilibrium of the firm and industry under perfect competition (short run and long run).

UNIT III

Monopoly Market:

Meaning, concepts and characteristics of monopoly market.

Equilibrium price and output determination under monopoly market in short and long run. Monopoly price discrimination. Degree of monopoly power and its measure.

Control and regulation of monopoly power.

UNIT IV

Duopoly and Oligopoly Market

Non-collusive oligopoly: Cournot's duopoly and Kinked-Demand Model. Collusive oligopoly: Cartel; Cartels aiming at joint profit maximization and market sharing cartels.

Price leadership; low-cost price leadership, dominant firm price leadership and barometric price leadership.

UNIT V

Monopolistic Competition

Meaning, price determination of a firm under monopolistic competition; Chamberlin's group equilibrium; theory of excess capacity; selling costs; difference between perfect competition and monopolistic competition; difference between monopoly and monopolistic competition.

Course Outcomes:

Upon completion of the course, the students will be able to:

- CO1: Comprehend the significance of different components of market,
- CO2: Analyze the basic economic concepts required for various types of market and their policies,
- CO3: Develop the problem solving aptitude through practical and case study problems faced by the economy,
- CO4: Able to use the economic tools in the decision making process of fixing prices and quantities in different Market,
- CO5: Differentiate between different markets and the policy measures to regulate it, and
- CO6: Survey and map the impact of the current micro and macro-economic situations in the economy.

Course Title	Pragmatic Inquiry
Course Code (Credit)	HS30127 (L-T-P-Cr: 3-0-03)

Course Objective:

As a foundation for lifelong inquiry, this course introduces students to research techniques and how they are used in both liberal arts, technical and professional courses.

Course Contents:

UNIT I

Pragmatic Inquiry:

Meaning, characteristics, need, type, and approaches.

UNIT II

Research Problem:

Meaning, definition, selection, and framing of problem statement.

UNIT III

Research Design:

Meaning, characteristics, need, type, approaches, and problems of research design.

UNIT IV

Sampling Design:

Meaning, characteristics, need, type, approaches, and problems.

UNIT V

Data Collection Method and Analysis:

Types of data, Source of data, Methods of data collection, data analysis.

Course Outcome:

Upon completion of the course, the students will be able to:

CO1 : Understand the meaning and importance of research in behavioral science

CO2 : Describe in detail different types of research methodologies,

CO3 : Identify the strengths and weaknesses of the different study designs,

CO4 : Assess whether research studies are using the most appropriate study design

CO5 : Discuss why various approaches may be appropriate/ inappropriate for their work-based research Question, and

CO6 : Apply the concepts in research related activity.

Course Title	Economic Analysis Of Decision Rules
Course Code (Credit)	HS30129 (L-T-P-Cr: 3-0-03)

Course Objective:

Analyze and understand investment decisions under the conditions of risk and uncertainty. Particular economic models are not the ends, but the means for illustrating the method of applying mathematical techniques to economic theory in general.

Course Contents:

UNIT I

Investment Decisions under Risk and Uncertainty:

Concepts of Risk and Uncertainty; Investment Decisions under Risk: The Pay-Off Matrix Method, Risk-Adjusted Discount Rate Method, Certainty-Equivalent Approach, Probability Theory Approach, Decision Tree Method, Simulation, Sensitivity Analysis.

UNIT II

Game Theory and Strategic behaviour of Firms:

Basics of Game Theory, Prisoners' Dilemma: The Problem of Oligopoly Firms; Application of Game Theory to Oligopolistic Strategy; Nash Equilibrium: Pure and Mixed Strategy

UNIT III

Optimization: Constrained & Extrema:

Free and constrained optimization, extrema of a function of two variables: graphical analysis, Lagrange method. Utility maximization & Cost minimization.

UNIT IV

Linear and Non-Linear Programming for Business Decisions:

Conditions for Application of Linear Programming; Concept of Feasible Solution; Assumptions of Linear Programming Application of Linear Programming Technique: Profit Maximization Problem, Formulation of Profit Maximization Problem in Linear Programming Mode; Graphical Method of Solving Linear

Programming Problems; Simplex Method: Algebraic Solution, Simplex Tableau Method. Introduction to Non-Linear Programming

UNIT IV

Input-Output Analysis:

Input-output model, its structure and its derivation. The use of input output model in Economics.

Course Outcomes:

Upon completion of the course, the students will be able to:

CO1: Analyze and understand investment decisions under the conditions of risk and uncertainty,

CO2: Explain how game theory brings out the strategy used by the oligopoly firms to determine the best possible action to maximize profit-maximizing objective,

CO3: Understand functional formulation of the problem and application of linear programming,

CO4: Describes different concepts used in analysing the national income and the different methods applied to measure the national income,

CO5: Describe and explain the main channels of the monetary transmission mechanism through monetary and fiscal policy, and

CO6: Describe managerial decisions through the application of some economic concepts, theories and principles.

Textbooks:

Course Title	Economics Of Health And Education
Course Code (Credit)	HS 30131 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The United Nations member states' adoption of the Millennium Development Goals, which include among other objectives achieving universal primary education, reducing child mortality, enhancing maternal health, and combating diseases, reflects the significance of education and health in enhancing wellbeing. This course offers a microeconomic framework to examine, among

other things, individual preference in the demand for health and education, governmental involvement, and elements of inequality and discrimination in both sectors. An outline of India's health and education system is also provided.

Course Contents:

UNIT I

Role of Health and Education in Human Development:

Importance of health and education outcomes and their relationship with macroeconomic performance.

UNIT II

Health Economics Market:

Demand for health; uncertainty and health insurance market; alternative insurance mechanisms; market failure and rationale for public intervention; equity and inequality.

UNIT III

Education: Investment in Human Capital:

Rate of return to education: private and social; quality of education; signaling or human capital; theories of discrimination; gender and caste discrimination in India.

UNIT IV

Health and Education Sectors in India: An Overview

Health outcomes; health systems; health financing. Cost effectiveness and cost-benefit analysis; burden of disease. Literacy rates, school participation, school quality measures.

UNIT V

Trend in Health and Education Sector in India:

Secondary data analysis pertaining to health and education sector. Trend analysis and forecasting using time series data. Simple growth rate calculations.

Course Outcomes:

Upon completion of the course, the students will be able to:

- CO1: Understanding role of health and education in human development,
- CO2: Analysing microeconomic foundations of health economics,
- CO3: Assessing the growth of health sector in India,
- CO4: Appraising the benefits of investment in human capital,
- CO5: Assessing the growth of education health sector in India, and
- CO6: Examining the underlying discrepancies in both sectors.

Course Title	Tribal Resource Management
Course Code (Credit)	HS30423 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The course intends to impart a comprehensive knowledge about the reality, pertaining to economic alleviation of the poor and downtrodden. It is interdisciplinary and based on utilization of natural resources employing traditional means of approach, conducive for societal growth and development. This shall hone socioeconomic environmental development for uplifting the condition of tribal population for igniting new ideas in the new economy.

Course Contents:**UNIT I****Natural Resource Management**

Introduction to Natural Resources and their management: Natural Resource Management (NRM): Concept, Issue and Approaches; Need for developing extension strategies for NRM; Issues in management of NRM; Problems encountered while advocating strategies for NRM; Monitoring and auditing in Natural Resource Management (NRM); Triple Bottom Line (TBL) and concept of Sustainable Natural Resource Management; NRM of Water, land and forests: Water resources and their management, Overview of irrigation management, Integrated Watershed management and rainwater harvesting, River Basin management; Scope of market mechanism in NRM

UNIT II**Agribusiness Management**

Agricultural value chains and their relevance; Managerial Insights: Identifying agribusiness opportunities; Assessing feasibility – technical, commercial and financial and thereby identify feasible opportunities for projects; Analyzing influences of external environment factors and associated risks; Discussions on

illustrative agribusiness projects; select models and opportunities of agribusiness opportunities and ventures.

UNIT III

Environmental Resource Management of Tribals

Environment and Development-Theories of optimal use of exhaustible and renewable resources; Sustainable Development - The concept of sustainable development; strong and weak sustainability; Mechanism for environment regulation in India; environmental laws and their implementation; Environmental Policy in India-Policy instruments for controlling water and air pollution and forestry policy; Institution for forest Management- The institutions of joint forest management , social forestry-rationale and benefits

UNIT IV

Tribal Health and Education Management

Role of Health and Education in Tribal Development: Importance in poverty alleviation; health and education outcomes and their relationship with macroeconomic performance; Tribal Health in India: An Overview Health outcomes; health systems; health; Evaluation of Health Programs for tribals: Costing, cost-effectiveness and cost benefit analysis; burden of disease; Tribal Education in India: An Overview Literacy rates, school participation, school quality measures

UNIT V

Agro forestry Management

Multiplicity of Agroforestry products and services- ecological and economic and cultural considerations- gender equality- preservation of indigenous knowledge. Socioeconomic benefits of agroforestry; Smallholder livelihood and the role of agroforestry- Food and nutritional security Fulfillment of food, fodder, fuelwood and shelter based needs- income generation vs. subsistence production; Adoption of AF- Determinants of adoption: feasibility, profitability, and acceptability; . Self-efficacy in farmer decision-making - policy aspects.

Course Outcome:

Upon completion of this course, the students will be able to:

CO1: Identify the concept of sustainable natural resource management,

CO2: Recognize agribusiness management, its opportunities and risks,

CO3: Discuss adequate skills to prepare and implement integrated development plan & projects for

the optimal use of tribal renewable resources for the sustainable development of the environment,

- CO4: Illustrate the nuances of environmental policies and Laws in India and understand the core competencies required for resource mobilization and policy formulation based on the research insight,
- CO5: Prioritize the role of health and education for the development of tribal community, considering tribal people as resources, and
- CO6: Develop trainees or volunteers as competent change agent in the field of tribal resource management.

Text Books:

1. Madhusudan Bandi ,Tribals and Community Forest Management , Rawat Publication, 2013
2. Jumyir Basar,Indigenous Knowledge and Resource Management Shipra Publications, 2014
3. Laishram Herojit, Rethinking Resource Management: Sustainability and Indigenous Peoples, A.K. Publications, 2012.

Reference Book:

1. G.K. Bera, Tribal India’s Traditional Wisdom and Indigenous Resource Management by, Abhjeet Publishers.

Course Title	GENDER STUDIES
Course Code (Credit)	HS30421 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of this course is to make student understand the concepts of masculinity and femininity as analytical categories via analysing the role of communalism, patriarchy, violence as major hurdles to women’s rights globally. Further, this course will enhance their understanding over the current health and education status of women to analyze impact of government health policy on women. Additionally, it will bring greater understanding over the integration of gender concerns and perspectives in policies and programmes for sustenance of environment at international, national, regional levels.

Course Contents:

UNIT I

Understanding Basic Concepts in Gender Studies

Concepts: Sex, Gender, Sexuality, Femininities, Masculinities and other sexualities, Patriarchy; WID: Women in Development; WAD: Women and Development; GAD: Gender and Development

UNIT II

Gender and Human Rights Discourse:

Women's Rights as Human Rights (FGM, FF, Rape, Honour Killing, IVP, Witch Hunting, Virginity Test, Communalism, Trafficking, Immigration); National Commission for Women and other State Commissions, Ministry and Department of Women and Child.

UNIT III

Gender and Health:

Sexual and reproductive health (ICPD, B.P.A. Family planning and Abortion); Impact of violence on women's health; Women's health movement: National and International; National health and population policy; National Family Health Survey (NFHS)

UNIT IV

Gender and Education:

Women's Education in Free India: Gender Disparity in Enrolment; Constraints of Women's Education: Social, Economic, Cultural, Geographical, other Factors; Important Committees and Commissions on Women's Education: Radhakrishnan Commission (1948), Mudaliar commission (1952), Kothari Commission (1964-1966), Ramamurthy Commission (1991).

UNIT V

Gender and Environment:

Role of women in environment conservation; Role of Women in Waste Management; Women's Resistance to Environmental Destruction: Joint Forest Management – CHIPKO Movement – Narmada Bachao Aandolan

Course Outcome:

Upon completion of this course, the students will be able to:

- CO 1: Familiarise the students with the concepts of sex, gender and sexuality commonly used in gender studies,
- CO 2: Identifying major human rights violations faced by women worldwide,
- CO 3: Learn about women's health movements and government health policies,
- CO 4: Develop an insight into policy perspective issues, and concerns of girl's education in India,
- CO 5: Delineate the characteristics and the issues of environment and the involvement of women in balancing ecosystem, and
- CO 6: Understand on sustainable development, millennium development goal, and other global level development initiatives taken for uplifting women status in society.

Course Title	Indian Knowledge System
Course Code (Credit)	HS30425 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of the course is to promote interdisciplinary study on all aspects of the Indian Knowledge System (IKS), preserve and disseminate IKS for further study and societal applications. It will actively help students to engage in spreading the rich heritage of our country and traditional knowledge in the field

of Liberal Arts, Literature, Basic Sciences, Engineering and Technology, Economics, mental and physical well being etc.

Course Contents:

UNIT I

Meaning of Traditional Knowledge System:

Overview of the Vedas, the Upanishads, the Puranas, and the Itihasas. Main Schools of Darshana/ Philosophy: Astika (Vedanta, Nyaya, Vaisheshika, Sankhya, Mimamsa, Yoga) and Nastika (Buddhist, Jainist, Lokayata). Types of Shastra (Vyakarana, Kavya, Alamkara, Shilpa, Vastu, Natya and Sangita). Types of Kavya (Drishya, Shravya, Chitra). Theory of Rasa: Natyashastra by Bharata (Chapter 6). Applied Traditional Knowledge: Myths, Rituals, Taboos and Superstitions, Folktales, Proverbs. Fundamental Concept of Dharma and Its Role in Various Streams of Indian Knowledge System

UNIT II

Yoga and Spiritualism:

Definition and Origin of Yoga. Significance of spirituality in Yoga, Historical development of Yoga; Yogic philosophy: The eight limbs of yoga according to Patanjali, Mind, body & spirit connection in yoga; Relevance of Asana, Pranayama & Dhyana in Yoga: Physical posture for physical, mental and spiritual development, Breathing techniques for energy restoration & consciousness, Meditation for inner stillness and mindfulness, Meditation for spiritual growth & self-discovery; Ethics & Moral Values in Yoga: Exploring the ethical principles Yama and Niyama, Application of yogic principles to daily life for spiritual growth; Yoga & Spirituality in modern life.

UNIT III

Fun with mathematics without calculator

Arithmetic- Quick calculation with 11 and 12, Multiplication with 99999 in seconds, multiplication with numbers near the bases, vertical and cross multiplication, Magic squares and square roots, cubes, fractions, divisions, HCF and LCM in ancient style. Algebra- Factorising quadratic expressions, One variable linear equation, Simultaneous linear equations. Implementation of Vedic mathematics tools during competitive examinations.

UNIT IV

Ancient Indian Science and Technology

Technological development in India: Agriculture (Origin and development, ancient crops, Traditional practices), Water management (Overview, Harappan water management, other case studies, Medieval Water structures), Pottery (Overview, Technical aspects), Silpasastra (Architecture and Construction: An introduction

to Silpasastra, Construction Technology), Metallurgy (Copper/Bronze/Zinc, Iron and Steel Technology in India).

UNIT V

Trade and Commerce in Ancient India

Internal, External, Trade routes Indo-Roman contacts and Maritime Trade of South India; Silk and Cotton Textiles, the Principal Maritime Trade Commodities of Ancient India; Trade routes in Ancient India: Silk Route and Spice Route.

Course Outcome:

Upon completion of this course, the students will be able to:

- CO1: Understand the concept of Indian traditional knowledge and its importance,
- CO2: Know the need and importance of protecting traditional knowledge,
- CO3: Develop an appreciation among the students for ancient scriptures,
- CO4: Contrast and compare characteristics and important kinds of traditional knowledge,
- CO5: Evaluate social change on traditional knowledge, and
- CO6: Create innovative ways of bringing forward ancient knowledge to the forefront.

OPEN ELECTIVE COURSES (OE)

Course Title	Software Engineering Fundamentals
Course Code (Credit)	CS30018 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To know software process models
- To understand application of software process models
- To be able to know requirements of the software projects
- To apply the basic project management practices in real life projects.
- To be able to distinguish different testing methodologies

Course Contents:

Unit I

Software Process Models:

Software product, Software crisis, Handling complexity through Abstraction and Decomposition, Overview of software development activities. Process Models: Classical waterfall model, Iterative waterfall model, Prototyping model, Evolutionary model, Spiral model, RAD model. Agile models: Extreme programming and Scrum. Software Requirement Engineering

Unit II

Software Requirement Engineering:

Requirement Gathering and analysis, Functional and non functional requirements, Software Requirement Specification(SRS) , IEEE 830 guidelines, Decision tables and trees.

Unit III

Software Project Management:

Responsibilities of a Software project manager, Project planning, Metrics for project size estimation, Project estimation techniques, Empirical estimation

techniques, COCOMO models, Scheduling, Organization & team structure, Staffing, Risk management, Software configuration management.

Unit IV

Structural Analysis & Design:

Overview of design process: High level and detailed design, Cohesion & coupling, Modularity and layering, Function-Oriented software design: Structural Analysis, Structural Design (DFD and Structured Chart), Object Oriented Analysis & Design, Command language, menu and iconic interfaces.

Unit V

Testing Strategies:

Coding, Code Review, Documentation, Testing:, Unit testing, Black-box Testing, White-box testing, Cyclomatic complexity measure, Coverage analysis, Debugging, Integration testing, System testing, Regression testing.

Course Outcome:

Upon completion of this course, the students will be able to:

CO1: Elaborate on different software process models

CO2: Evaluate the requirements of the software projects.

CO3: Apply the basic project management practices in real life projects.

CO4: Translate the baseline requirement specifications into design process.

CO5: Distinguish different testing methodologies.

CO6: Work ethically in a team on software projects

Textbooks:

1. Fundamentals of Software Engineering, Rajib Mall, PHI, Latest edition.

Reference books:

1. Software Engineering: A Practitioner's Approach, Roger S. Pressman, Eighth edition, MGH.
2. Software Engineering, Ian Sommerville, Tenth Edition, Pearson Education.

Course Title	Essentials of Computer Science
Course Code (Credit)	CS30020 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To make the student understand the basic building blocks of a computing system

- To make the student understand the flow of Concept- Program-Input- Processing-Output
- To introduce low level language, translators, operating system

Course Contents:

UNIT I

Concept, Program, Input, Processing – Output:

Demo of simple high level language program to low level machine level language program, Tracing their execution from high level to circuit level/ gate level, Overview of the Hardware Description Language (HDL), Designing a set of elementary logic gates from primitive NAND gates. Design of binary adders, Culminating in the construction of a simple ALU (Arithmetic-Logic Unit) using logic gates, Design of memory hierarchy from elementary flip-flop gates to registers and RAM units of arbitrary sizes using logic gates.

UNIT II

Introduction to Low Level Language:

Introducing an instruction set in both binary and assembly (symbolic) versions, Writing some low-level assembly programs, Other details of computer architecture, Basic language translation techniques: parsing, symbol table, macro, assembly

UNIT III

Introduction to Virtual Machine:

The role of virtual machines in modern software architectures like Java and .NET, Introduction of a typical VM language, Focusing on stack-based arithmetic, Logical and memory access operations, VM abstraction and implementation, Focusing on stack-based flow-of-control and subroutine call-and-return techniques.

UNIT IV

Introduction to Compilers:

Context-free grammars and recursive parsing algorithms, Building a syntax analyzer (tokenizer and parser), The syntax analyzer to generate XML code reflecting the structure of the translated program, Code generation, Low- level handling of arrays and objects.

UNIT V

Introduction to OS:

Discussion of OS/hardware and OS/software design trade-offs, and time/space efficiency considerations, Design and implementation of OS, memory management, string processing, I/O handling algorithms.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Trace the fundamentals of digital logic design

- CO2: Classify programming languages
- CO3: Explore the use of compiler
- CO4: Generate low level code for simple programs
- CO5: Understand functionality of an operating systems
- CO6: Design simple arithmetic and memory units

Textbooks:

1. Noam Nisan, Shimon Schocken, “The Elements of Computing System: Building a Modern Computer from First Principles”, MIT Press, 2005.

Course Title	Object Oriented Programming
Course Code (Credit)	CS30022 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	CS13001

Course Objectives

- To understand the difference between structure-oriented and object-oriented programming
- To know various object-oriented features
- To know exception handling and generic programming
- To test and debug solutions in C++

Course Contents:

Unit I

Introduction to Object Oriented Programming:

Object oriented programming concepts: Objects, Classes, Encapsulation and abstraction, Inheritance, Polymorphism, Dynamic binding, Message passing; C++ Programming basics: Character set, Keyword, Constant, Variable, Data types, Operator & expression, Control structure (branching & looping), typecasting, Array & strings, Streams based I/O, Type conversions and casting, Name space, Scope resolution operator (::); Function: Parameter passing (i) by value, (ii) by address, (iii) by reference, Inline function, Function overloading, Default arguments.

Unit II

Class and Object:

Class and Object: Defining class with functions and data members, Creating & deleting objects by using new and delete operators respectively, Array of Objects, Objects as function argument, Static Data members and member functions, Function with default arguments, Function overloading; Constructor and

Destructors: Definition of constructors and its uses, Types of constructors: Default constructor, Parameterized constructor, Copy constructor, Constructor with dynamic allocation, Dynamic Constructors, Constructor Overloading, Destructors.

Unit III

Inheritance:

Concept of inheritance: Defining derived and base classes, Class hierarchies, public, private, and protected derivations; Types of Inheritance: Single Inheritance, Multilevel Inheritance, Multiple Inheritance, Hierarchical Inheritance, Hybrid Inheritance, Virtual base class: Function overriding, Constructors/Destructors in derived classes: Constructors invocation and data members initialization in derived classes, Member classes: classes within classes.

Unit IV

Polymorphism:

Operator overloading: Overloading unary operators, Binary operators, overloading binary operators using friend function and member function, Rules for overloading operators; Polymorphism: Introduction to pointers: Pointers to objects, Pointer to derived class object, This pointer, Compile time polymorphism: Review of Function Overloading and Operator overloading; Run time polymorphism: Virtual functions, Pure virtual functions, Abstract class, Virtual constructors and destructors

Unit V

Exception Handling, Templates, Files and Streams:

Exception Handling: Basics of Exception Handling, Exception Handling Mechanism: The keyword try, Throw and catch. Templates: Need of template, Class Templates: Definition, Class Template with multiple parameters, Function Templates: Definition, Function Template with multiple parameters. Files and Streams: Introduction to file handling: text file Vs. binary file, Hierarchy of file stream classes: Functions of File Stream classes, Steps to process a File in a program. Different functions used in file, File modes(Sequential and random), File pointers and their Manipulations, Error handling during file operation

Course Outcome:

Upon completion of this course, the students will be able to:

CO1: Compare the features between structure-oriented and object-oriented programming

CO2: Develop object-oriented programming language like C++ and associated libraries to develop object-oriented programs.

- CO3: Apply various object-oriented features like class, object, inheritance, data abstraction, encapsulation polymorphism to solve various computing problems
 CO4: Design application using operator-overloading, contracture and destructor
 CO5: Apply exception handling and use built-in classes from STL
 CO6: Implement, test and debug solutions in C++.

Textbooks:

1. Object Oriented Programming with C++, Reema Thareja, OXFORD University Press, Revised First Edition, 2018.
2. Object Oriented Programming with C++, E.Balaguruswamy, McGraw Hill Education; Seventh edition 2017.

Reference Books :

1. C++ completes reference, Herbert Schildt, MGH, 10th Edition, 2002
2. C++ How to Program, Deitel and Deitel, Pearson Education, 10th Edition, 2011.
3. Programming in C++ Ashok N Kamthane, Pearson Education, 2nd Edition, 2003

Course Title	Fundamentals of Data Structures
Course Code (Credit)	CS30024 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

- To find the Time Complexity and Space Complexity for algorithm
- To understand the various techniques of sorting and searching
- To design and implement arrays, stacks, queues, and linked lists
- To understand the complex data structures such as trees and graphs
- To solve real life problems

Course Contents:

UNIT I

Introduction:

Development of Algorithms, Notations and analysis, Storage structures for arrays, Sparse matrices, Stacks and Queues: Representations and applications.

UNIT II

Linked List, Stacks, and Queues:

Linked Lists, Linked stacks and queues, Operations on polynomials, Doubly linked lists, Circularly linked lists, Dynamic storage management, Garbage collection and compaction.

UNIT III

Trees:

Tree representation, Binary Trees, Binary search trees, Tree traversal, Expression manipulation, Symbol table construction, Height balanced trees, AVL trees.

UNIT IV**Graphs:**

Graphs, Representation of graphs, BFS, DFS, Topological sort, String representation and manipulations, Pattern matching.

Course Outcomes

Upon completion of this course, the students will be able to:

CO1: Use the concepts of data structure, data type and abstract data type to develop solutions for engineering problems.

CO2: Develop programs to implement linear data structures such as stacks, queues, linked lists, etc.

CO3: Apply the concept of trees and graph data structures in real world scenarios

CO4: Comprehend the implementation of sorting and searching algorithms

CO5: Compare Time Complexity and Space Complexity for algorithm

CO6: Effectively choose the data structure that efficiently models the information in a problem.

Textbooks:

1. J. P. Tremblay, P. G. Sorenson, "An Introduction to Data Structures with Applications", Second Edition, Tata McGraw Hill, 1981.
2. M. Tenenbaum, Augestien, "Data Structures using C", Third Edition, Pearson Education, 2007.
3. Mark Allen Weiss, "Data Structures and Algorithm Analysis in C", Third Edition, Pearson Publishers, 2006.

Reference Book:

1. Sartaj Sahni, "Data Structures, Algorithms and Applications in C++", Universities Press (I) Pvt. Ltd., 2008.

Course Title	Advanced Numerical Techniques
Course Code (Credit)	MA30002 (L-T-P-Cr: 3-0-03)

Course Objective:

The objective of this course is to equip the students with the advanced level of numerical computations to tackle the different mathematical models.

Course Contents:

UNIT I

Errors

Definition and sources of errors, Propagation of errors, Errors in summation

UNIT II

Root finding for nonlinear equations and systems of equations:

Muller's Method, Chebyshev Method, Solution of the system of non-linear equations using the Newton Raphson method.

UNIT III

Interpolation:

Gauss forward and backward interpolation, Hermit's interpolation, Bivariate Interpolation and Inverse interpolation.

UNIT-IV

Numerical Integration:

Romberg Integration, Gauss-Legendre, Gauss-Chebyshev, Gauss-Laguerre, and Gauss-Hermite Integration Methods. Double Integration by Trapezoidal and Simpson's methods.

UNIT V

Numerical Solution of ODEs and PDEs:

Milne's method, Shooting Method and Finite difference methods to solve parabolic and elliptic equations.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Understand the error propagation in numerical computations,
- CO2: Know the concept of numerical techniques to find the root of non-linear equations and simultaneous equations,
- CO3: Find the interpolating polynomials and inverse interpolation,
- CO4: Apply the numerical techniques to approximate the definite single and double integrals,
- CO5: Know the concept of numerical solution of boundary value problems, and
- CO6: Use the finite difference method to solve partial differential equations.

Textbooks:

Course Title	Composite Materials And Structures
Course Code (Credit)	CH40002 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The main objective of this course is to increase student knowledge in design, manufacture and analysis of composite materials that can have better structural, thermal, electrical, mechanical, dielectric, magnetic, optical, electrochemical and biomedical properties.

Course Contents:

UNIT I

Classifications and Industrial Applications of Composite:

General introduction, classification of composites, matrix materials (polymer, metal and ceramics) and reinforcement materials (fibres-glass, Aramid, Carbon, Boron), microstructure of composite, applications: in civil constructions, aerospace industries, automobile, packing industry, advantages and limitations of composite materials.

UNIT II

Performance of structural composites:

Matrix/reinforcement interface, reinforcement mechanism, combination effects (law of mixtures, weight fraction, volume fraction), effect of voids in composites, fracture mechanics of composites, strengthening mechanisms, stress-strain relations (generalized hooke's law), stress distribution in fibre and the matrix (shear stress and axial tensile stress in the fibre along its length), critical length of fibre for full strengthening, estimation of the critical amount of fibre to gain a composite strength.

UNIT III

Fabrication of composites:

Fabrication of metal matrix composites, fabrication of polymer matrix composites, fabrication of ceramic matrix composites, selection of constituents,

solidification processing of composites, synthesis of in situ composites, various techniques of vapor deposition, liquid phase method and hot pressing etc.

UNIT IV

Characterization:

Characterization methods of composites (x-ray diffraction (XRD), Electron microscopy (SEM, TEM) analysis of composites, Thermal Analysis, Fire retardancy test for polymer composites.

UNIT V

Green Composite:

Introduction, Composition of green composite, bio-degradable reinforcement fibre (cellulose, starch, wool/silk, carbon nanotube, nano-clay, biodegradable matrix (cellulose, starch, chitin, protein), applications of green composite.

Course Outcomes:

Upon completion of this course, the students will be able to

CO1 : Define and classify composites,

CO2 : Evaluate the relative merits of using composites with respect to conventional materials for important engineering and other applications.

CO3 : Quantify physical and mechanical properties of composite materials as a function of parameters such as volume fraction, orientation and arrangement.

CO4 : Design and prepare composite structures,

CO5 : Apply XRD, SEM and TEM in micro- structural analysis of composites.

CO6 : Understand the concept of green composite and their processing techniques.

Course Title	Finite Element Analysis
Course Code (Credit)	MA40001 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This course aims to develop a practical understanding to Finite Element Analysis (FEA) as a tool to solve variety of problems governed by differential (ode and pde) equations in all areas of engineering and the sciences. This is an introductory course. This course will expose the key concepts to help in understanding the nuances of the FEA techniques.

Course Contents:

UNIT I

Introduction to FEA:

Introduction to finite element methods, finite element formulation starting from governing differential equation, weighted residual method, weak (variational) form of the weighted residual, comparison of differential equation with weak form and weighted residual form. Rayleigh-Ritz method, piece wise continuous trial function, functionals and differential equation forms.

UNIT II

Discretization and Interpolation:

Element Shapes, Nodes, Nodal Unknowns and Coordinate Systems, Shape Functions, Polynomial Shape Functions, Convergence Requirements of Shape Functions, Derivation of Shape Functions Using Polynomials, Finding Shape Functions Using Lagrange Polynomials, Shape Functions for Serendipity Family Elements, Hermite Polynomials as Shape Functions.

UNIT III

Stiffness Matrix and Variational Forms:

Strain-Displacement Matrix for Bar Element, Strain Displacement Matrix for CST Element, Strain Displacement Relation for Beam Element, Assembling Stiffness Equation, Direct Approach (Element Stiffness Matrix for CST Element, Nodal Loads), Galerkin's Method, Virtual Work Method, Variational Method.

Solution of 1-D and 2-D boundary value problems using direct, Galerkin and Variational method.

UNIT IV

Isoparametric Formulation and its Implementation:

Isoperimetric Formulation, Coordinate Transformation, Basic Theorems of Isoparametric Concept, Uniqueness of Mapping, Isoparametric, Superparametric and Subparametric Elements, Assembling Stiffness Matrix, Solution of 1-D and 2-D boundary value problems (steady and unsteady heat transfer) using the above discussed method and its implementation using any programming language (C/C++/ MATLAB/Python) or software like COMSOL.

Course Outcomes:

Upon completion of this course, the students will be able to

CO1 : Define mathematical models using finite element methods.

CO2 : Understand the concepts of nodes, elements and shape and can use it in the discretization.

CO3 : Develop stiffness matrices for 1-D and 2-D problems using the concept of direct, Galerkin and variational methods.

CO4 : Apply isoparametric concept to convert the non-orthogonal domain to orthogonal domain, CO5: Solve 1-D and 2-D boundary value problems in ODE/PDE.

CO6 : Implement the methods by developing computer code/using software.

Course Title	Industrial Ecology And Design For Sustainability
Course Code (Credit)	LS30002 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The course will aim to cover the core concepts of sustainability, sustainable engineering, and how natural ecosystems function. The next objective would be

to identify replicable natural systems from an engineering perspective, and how technological systems may be able to mimic nature. Modelling human made and natural systems and their dynamics, along with identifying key structural and functional nodes that can turn an industry to become fully automated while considering key environmental and social angles.

Course Contents:

UNIT I

Introduction to Industrial Ecology:

Fundamentals of sustainability, Sustainable Development Goals, Climate crisis, the promise of an ever-expanding global economy, industrial engineering, role of engineers, origin of IE, its definition, the environment and the anthrosphere, industrial systems, material resources, societal factors and environmental equity. Link to sustainable development.

UNIT II

Ecosystem Functioning:

Components, interactions, structuring, energy flow in different ecosystems, ecological pyramids, nutrient cycling, concept of niche.

UNIT III

Industries as Ecosystems:

Components of an industrial ecosystem (Kalundborg example), zero waste industries, Material cycling, Resilience to stochastic events industrial symbiosis, role of government, community, developers, management, biomimetics, turning linear process cyclical, waste utilization (refusing, reducing, repurposing, recycling, and reuse)evaluating the success of eco-industrial development,

UNIT IV:

Life Cycle Assessments:

Cradle to coffin following up on the origin and degradation of materials used in industries, how can one assess the fate of materials, waste products, and reduce industrial waste. Life cycles of products, processes and facilities; life cycle assessment (components, methodology, applications, difficulties), design for environment, efficient use of material (remanufacturing, recycling, reuse, etc.

UNIT V

Design for Sustainability:

Product design, automating industries (drones, neural networks, IOT), conception of environmentally friendly products, carbon neutral industries, use of bamboo, mushrooms and alternative materials.

UNIT VI

Environmental Management Systems:

ISO, auditing, maintenance of EMS, ISO14001

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Identify the basic nature of the course on offer,

CO2 : Comprehend and scrutinize the underlying network of every ecosystem.

CO3 : Apply ecological concepts to industries.

CO4 : Understand the sequence of events which lead to an environmental impact.

CO5 : Apply and visualize engineering knowledge to solve practical problems.

CO6 : Learn an organized approach to manage environmental quality.

Textbook:

1. Erkman S. and Ramaswamy R. (2003) Applied Industrial Ecology – A New Platform for Planning, Sustainable Societies, AICRA Publishers, Bangalore, India.

Reference Book:

1. Edward Cohen-Rosenthal E. and Musnikow J. (edited) (2003) Eco-industrial Strategies, Sheffield, UK: Greenleaf Publishing.

Course Title	Quantum Computing
Course Code (Credit)	PH40001 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of this course is to open up and introduce quantum computation as well as its supremacy over classical computation to the students and technically trained professionals from the field of engineering and general science.

Course Contents:

UNIT I

Background mathematics and Framework of Quantum mechanics:

Operators, Projectionra and Ket Vectors, Orthonormal Bases, Two Dimensional Hilbert Space, Qubit and Quantum States, Linear Operators, Matrix Representations of Vectors and Linear Operators, Inner and Outer Products, Eigen Values and Eigen Vectors, Gram–Schmidt Procedure of Constructing an Orthonormal Basis Set, Completeness Relation, Hermitian Operators, Projection Operator, Unitary Operator, Normal operator, The Commutator and Anti-commutator, Change of Basis, Spectral Decomposition, Pauli Matrices, Tensor

Products, The Postulates of Quantum Mechanics, Collapsing of Wave Function, Uncertainty Principle, State Space, Time Evolution of Quantum State, Stern-Gerlach Experiment, Spin as a Degree of Freedom, Representing Spin States using Spin Vectors. Bloch Sphere, Representation of Qubit on Bloch Sphere.

UNIT II

Density operator and Quantum Measurement theory:

Density Operator for Pure and Composite Systems and its Key Properties, Partial Trace and Reduce Density Operator, Density Operator and Bloch Vector. Projective Measurements, Measurements on Composite Systems, Positive Operator Valued Measures (POVM).

UNIT III

Basic Quantum Logic Operations and Gates:

Classical Irreversible and Reversible Gates, Reversible Computation.

Single Qubit Gates and Their Matrix Representations, Identity Gate, Pauli Gates, Square Root of NOT Gate, Phase Shift Gates, Hadamard Gate, Rotation Operator Gates. Limitations with These Gates.

Multiple Qubit Gates and their Matrix Representations: Controlled NOT (CNOT) Gate and its Matrix Representations, CNOT Basis Transformations, Entangled States and Their Visualization.

Universal quantum gates: Two-level Unitary Gates as Universal Gates, Single Qubit and CNOT Gates as Universal Gates, A Discrete Set of Gates for Universal Quantum Computation.

UNIT IV

Quantum Algorithms:

Matrix representation of serial and parallel Operations, Quantum Interference, Quantum Parallelism, Deutsch's-Jozsa Algorithm, Quantum Fourier Transform, Phase Estimation, Shor Factorization, Grover Search.

UNIT V

Quantum Cryptography:

Classical Cryptography, Quantum Key Exchange: BB84 Protocol, B92 Protocol, EPR Protocol, Teleportation

UNIT VI

Quantum hardware:

Goals and Challenges, Implementing Quantum Computers, Guiding Principles, Ion Traps, Linear Optics, Nuclear Magnetic Resonance (NMR) and Superconductors.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Understand and apply the mathematical background and principles of basic quantum mechanics needed for quantum computation,

CO2 : Understand and apply the principle of measurement in quantum theory on pure and composite systems,

CO3 : Know the architecture of quantum computers and apply them in handling quantum circuits,

CO4 : Understand some fast quantum search algorithms and evaluate certain simple problems,

CO5 : Understand quantum cryptography and know simple cryptography protocols, and

CO6 : Understand principles and working of practical quantum systems for physical realization of quantum computers.

Textbooks:

1. Nielsen and Chuang, Quantum Information and Quantum Computation (Cambridge University Press-2002)

Reference Books:

1. David McMahon- Quantum Computing Explained, John Wiley & Sons, Inc. (2008)
2. G Benenti, G Casati, G Strini - Principles of quantum computation and information. Volume 1-World Scientific (2004)

Course Title	Sustainable Energy And Environment
Course Code (Credit)	CH30002 (L-T-P-Cr: 3-0-0-3)

Course objective:

This course has been designed to make the learners understand principles of sustainable energy sources, their working principles, and their conversion systems. It also explores society's present needs; future energy demands and different energy conservation methods.

Course Contents:**UNIT I****Introduction of renewable energy:**

Introduction, Principles of renewable energy, Role of energy in economic development and social transformation, Energy Scenario (Classification of Energy Sources, advantages and disadvantages of conventional sources), Salient features

of nonconventional energy sources, Energy efficiency and security, Energy and its environmental impacts, Importance of renewable energy sources, Standards and regulations, social implications.

UNIT II

Solar energy:

Solar radiation and its nature, fundamentals of solar transmission, absorption and reflection, basics of solar thermal conversion, fundamentals of solar heating, principle and working of solar collectors, basics of solar photovoltaics, Solar photovoltaic energy conversion and utilization, materials and device design, P-N junction, Solar thermal applications to water desalination, refrigeration, and cooling, future prospects of solar energy.

UNIT III

Biomass energy:

Basic principles of photosynthesis, photosynthesis and its mechanism at cellular level, Usable forms of biomass, Classification, Chemical composition, fuel properties of biomass, Concept of bio-refinery: Bio-fuels, Bio based chemicals and materials, Biomass conversion routes; biological (Aerobic and Anaerobic conversion, Fermentation), chemical (hydrolysis and hydrogenation) and chemical (Pyrolysis, Combustion, Gasification, and Liquefaction), production of biogas, alcohols, hydrogen, biodiesel and green diesels.

UNIT IV

Hydrogen and hydro energy:

Hydrogen as a renewable energy source, Sources of Hydrogen, Hydrogen Production: Direct electrolysis of water, thermal decomposition of water, biological and biochemical methods, Storage of Hydrogen: Gaseous, Cryogenic and Metal hydride, Principles of hydropower and types of turbines. Social and environmental aspects of hydrogen fuel and hydropower.

UNIT V

Alternate sources of renewable energy:

Wind: Wind resources, characteristics of wind, classification of wind energy conversion systems. Ocean and tidal: Principle of tides and tidal power, ocean thermal energy conversion (OTEC), Energy and Power forms of waves, Wave energy conversion devices. Geothermal Energy: Geothermal Sources, Geothermal energy conversion and aquifer analysis, harnessing of geothermal resources, Social and environmental aspects of wind energy, wave energy and geothermal energy.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Explore different renewable energy sources available in present scenario.

CO2 : Understand the mechanism of harvesting solar energy, its use and future prospective.

CO3 : Understand biomass energy generation and its technologies.

CO4 : Realize energy generation principles and techniques of hydrogen and hydro power .

CO5 : Explore energy generation from wind, wave and geothermal sources.

CO6 : Apply the renewable energy technologies to solve various environmental problems.

Textbooks:

1. John Twidell and Tony Weir, Renewable Energy Resources-3e, , Routledge-Taylor and Francis.

Reference Books

1. D.P. Kothari, K.C. Singal, Rakesh Ranjan, Renewable Energy Sources and Emerging Technologies-3e, PHI Learning.
2. N.S Rathore and N.L. Panwar, Renewable Energy Sources For Sustainable Development-3e, New India Publishing Agency.

Course Title	Solid Waste Management
Course Code (Credit)	CH40001 (L-T-P-Cr: 3-0-0-3)

Course objective:

The uncontrolled consumption lifestyle is the root cause of the huge waste generation problem of our modern world. According to WHO report, world cities are producing 1.3 billion tonnes of solid waste per year and will be nearly double by the end of 2025. This course aims to cover different solid waste management techniques for sustainability and at the same time it also deals with the legal institutional framework for the same.

Course Contents:

UNIT I

Waste management and sustainability:

Solid waste and types, source and characteristics of waste, toxic and hazardous waste, generations of wastes, waste testing and analysis. Environmental health, driving force for sustainability, integrated waste management and sustainability.

UNIT II

Waste storage, segregation, collection and prevention:

Introduction, source segregation, waste storage, waste collection, waste separation, Health and Safety issue, waste prevention, The growing burden of waste, waste prevention in the context of sustainability, The policy context, waste prevention at the level of production and supply, Waste prevention at the level of consumption and household, Barriers to waste prevention, best practice in developed countries.

UNIT III

Public Engagement for Implementation of Waste Reduction and Recycling Policies:

Introduction, Defining Public Participation, Public participation in waste management systems, Public participation policy in Global context, typical areas of Public participation in waste management systems, Key Ingredients in Public Participation, selected Examples of Public participation in Waste Reduction and Recycling in Asia.

UNIT IV

Treatment Techniques:

Incineration, Gasification, Pyrolysis, Aerobic and Anaerobic Digestion as well as co-digestion, Plasma Arch Gasification, Bio-hydrometallurgical Processing of Metallic Components of E-Wastes, s/s immobilization of toxic/hazardous wastes.

UNIT V

Legal and Institutional Framework:

Introduction, Why Legal Framework Matters, Nature and Characteristics of Legal Framework, Scientific and policy judgments in risk assessment, Trajectory of US Experience, European Union's Legislative Effort, South Asia

Course outcomes:

Upon completion of this course, the students will be able to

CO1 : Understand integrated solid waste management concepts and its requirement.

CO2 : Able to understand waste prevention at different levels such as production, supply, consumption and disposal,

CO3 : Understand the importance of public engagement in sustainable waste management.

CO4 : Implement waste reduction and recycling policies,

CO5 : Explore modern treatment techniques for solid wastes.

CO6 : Understand the legal and institutional framework for sustainable solid waste management.

Textbooks:

1. Jonathan W. C. Wong, Rao Y. Surampalli, Ammaiyappan Selvam, Rajeshwar D. Tyagi, Tian C. Zhang; Sustainable solid waste management, American Society of Civil Engineers, 2016 (Textbooks:)
2. Freeman H.M. (1988) Standard Handbook of Hazardous Waste Treatment and Disposal, McGraw Hill. New York.

Reference Books:

Course Title	Basics Of Management Information System
Course Code (Credit)	BM30602 (L-T-P-Cr: 3-0-0-3)

Course Objective:

To provide hands on experience to students in using computers for data organization and addressing business needs.

Course Contents:**UNIT I****The Information Age:**

Purpose of IS, Types of IS, IS in Business function, Career in IS.

UNIT II**Strategic Uses of Information Systems:**

Jet Blue Success Story and Ford on the Web Failure Story Summary.

UNIT III**Business Function& Supply Chains:**

Effectiveness and efficiency, Accounting, Finance, Engineering, SCM, CRM, ERP.

UNIT IV

IT in Business:

Business Hardware, Business software, Business Networks and Telecommunications, Business Data Bases.

UNIT V

Types of IS:

TPS, MIS, EIS and ERP, Web Enabled Commerce, Challenges of Global, SDLC, Case Study and Test on Indian IS Cases, Open Sources, Outsourcing Basics. Expert System and DSS.

UNIT VI

Risk Management:

Security and Disaster Recovery

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Learn about various IS in business domains, tactical usage of IS in particular,
- CO2 : Understand the application of information system in business domains, and Integrated enterprise systems,
- CO3 : Apply various IS in business domains, tactical usage of IS in particular, application,
- CO4 : Analyze the application of various IS in business domains, tactical usage of IS, and in application of Integrated enterprise systems,
- CO5 : Evaluate the tactical usage of IS in particular, application of Integrated enterprise systems, and
- CO6 : Develop and co-create application of IS, their tactical usage, and its application of Integrated enterprise systems.

Textbooks:

1. Effy Oz, Management Information Systems, Cengage Publication, 7th Edition

Reference Books:

1. C S V Murthy, Management Information Systems, Himalaya Publication, 1st Edition
2. Laudon and Laudon, Management Information Systems, Pearson Publication, 13th Edition

Course Title	Entrepreneurship
---------------------	-------------------------

Course Objective:

Entrepreneurship have been engines of economic growth and prosperity in any society. The entrepreneur transforms resources to useful and valuable products, services and solutions. S/he does so by sensing opportunities and seize opportunities while transforming assets. Considering significance of entrepreneurship for the economy and society, large companies besides governments and Universities are promoting entrepreneurship. This is often known as intrapreneurship. In fact, all early management education was centered around creating and supporting entrepreneurs. It is therefore essential for all management graduates to learn entrepreneurship.

Course Contents:**UNIT I****Self-diagnosis and Understanding Entrepreneurship:**

What is Entrepreneurship, Test for an affinity for entrepreneurial work, Characteristics and skills of entrepreneurs, Age of an Entrepreneurial Firm, Types of Entrepreneurs.

UNIT II**Finding & Evaluating the opportunity:**

New Business Opportunity, Characteristics of genuine business opportunities, Where to look for profitable opportunities, The process of opportunity evaluation.

UNIT III**Intellectual Property:**

Trademarks, Copyright, Patents, Geographical Indication of Goods, Designs, Other IPR Laws, Trade Secrets and Confidential Information.

UNIT V**Family Business:**

Family Business in India, The Founder, The Next Generation, Entry of family Members, Non-family Members, Succession, Best Practices.

UNIT VI**Organizing the enterprise:**

Issues involved in Doing Business in India, The various forms of organization, Advantage & Disadvantage each form, Determining the best form of an Organization, Legal Issues

UNIT VII**Entrepreneurial Support:**

Policies, Business Incubation, Business Clusters.

UNIT VII

Buying a Business:

Challenges in Buying a Business, The Search, Process of Buying, Scrutiny, valuation, negotiation, Franchising.

UNIT VIII

Financing the business:

Angels & Venture Capitalists, Debt Finance.

UNIT X

Making a Business Plan and Strategy:

Uses of Business Plan, Writing a Business Plan, Data Collection, Kinds of Business Plans, Importance of the Executive Summary, Description of the Business, The Management Team, The Industry and the Market, Marketing Plan, Finance, Risk and Contingencies.

UNIT XI

New Product Development:

Types of New Products, New Product Development Process, The Adoption Process, Barriers to New Product Development.

UNIT XII

E-Business:

E-Commerce and Marketing Strategies.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Learn with examples / illustrations key concepts such as opportunities, challenges, resources & capabilities,

CO2 : Understand how new product development, intellectual property rights, efficiency, quality, innovation and customer responsiveness works,

CO3 : Apply the learned concepts to sense and seize opportunities,

CO4 : Analyze identifies opportunities for key success factors and required capabilities to win in the market place,

CO5 : Evaluate resource constraints to evaluate multiple opportunities and select appropriate opportunities for seizing, and

CO6 : Create a business plan.

Textbooks:

1. Rajeeb Roy, Entrepreneurship, Oxford University Press, 2nd Edition.

Reference Book:

1. Richard Luecke, Entrepreneur's Tool Kit: Tools & Techniques to launch and grow your business, McGraw Hill Publication, 11th Edition.

Course Title	Financial Management
Course Code (Credit)	BM30202 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The course introduces the general concepts of finance and how first principles of finance works. This course will provide an understanding of the functions, and operations of the financial environment in India. It explains the role of Time Value of Money in financial decision making. On completion of the syllabi, the students should develop a thorough understanding of the concepts and techniques underlying financial management in a systematic way. They should develop a framework for decision making in the context of corporate finance. The aim of this course is to equip the learners to understand, appreciate, and employ the corporate finance concepts and applications in the context of managerial decision making.

Course Contents:**UNIT I****Nature of Financial Management:**

Introduction, and scope of finance, Financial Goals related to profit maximization or wealth maximization.

UNIT II**Capital Budgeting Decisions:**

Time Value of Money, Understanding annuity, Calculation of NPV, IRR, Profitability Index, Payback Period.

UNIT III**Capital Structure Theories:**

Relevance of capital structure, The MM Hypothesis, The trade-off theory, Pecking Order theory.

UNIT IV**Management of Working Capital:**

Concept of working capital, Operating and Cash Conversion Cycle, Determinants of working capital, Issues in working capital management.

UNIT V

Investment, Financing, and Dividend policy:

Capital Investment Strategies, Cash Flow vs Profit, Components of cash flow, Depreciation calculation, Dividend relevance and uncertainty, Issues in dividend policies.

UNIT VI

The Role of Risk-Return relationship:

Introduction, Risk on a single asset, Variance and Standard Deviation, CAPM, Arbitrage Pricing Theory.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Learn first principles of finance and how it works,

CO2 : Understand and get an overview of the financial environment,

CO3 : Apply time value of money concepts in financial decision making,

CO4 : Analyze the importance of Financing and Dividend Decision,

CO5 : Evaluate the risk and return perspective in finance and the long-term investment evaluation techniques, and

CO6 : Develop critical understanding of the optimal management of inventory, debtors and receivables, and payables.

Textbooks:

1. Fundamentals of Financial Management – Amit Singhal, 1st Edition

Reference Books:

1. Essentials of Financial Management – I M Pandey, 5th Edition
2. Principles of Corporate Finance – Brealey, Myers and Allan, McGraw Hill, 13th Edition

Course Title	Training And Development
Course Code (Credit)	BM34104 (L-T-P-Cr: 2-5-5-3)

Course Objectives:

Students must understand the inevitability of training. The elective shall focus on the importance of an effective training needs assessment to plan training more effectively. At the end of the session, the student shall be able to link Strategy and T&D. The different kinds of training methods are covered in this course. In the present competitive and dynamic environment, it has become essential for organizations to build and sustain competencies that would provide them sustainable competitive advantage. Dynamic and growth-oriented organizations recognize training as an important aspect of managerial function in

a rapidly changing economic and social environment. Training is a process which enhances and develops his/her capabilities and effectiveness at work. After studying this, one will be able to understand new training techniques and how training is evaluated.

Course Contents:

- Introduction to Training & Development
- Relevance Of Training To Organizations
- Training & Competitive Advantage
- Linking Training to Business Goals
- Learning and theories of learning
- Training Need Identification:- Assessing Current & Future Training Needs
- Methods & techniques of delivering training inputs
- Roles & competencies of trainer
- Training design
- Transfer of Training
- Training Evaluation

Course Outcomes:

Upon completion of this course, the students will be able to

CO 1: Remember the importance of training,

CO 2: Understand the nature, concept, difference between training and other related concepts,

CO 3: Apply knowledge to understand the importance of training and its link with strategy,

CO 4: Analyze the various industry training and development practices,

CO 5: Evaluate the various industry training and development practices and identify the most effective methods aligned with the situation, and

CO 6: Develop the ability to evaluate the effectiveness of training.

2. Devendra Agochiya, Every Trainers Hand Book, Sage Publication, 2nd Edition, 2009, ISBN: 978-8132100812.
3. B Janakiram, Training & Development, Biztantra, Latest Edition.

Course Title	Marketing Management
Course Code (Credit)	BM30302 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The course develops concepts and skills necessary for marketing decision-making and illustrates how various decision-making tools apply to actual business situations. The goal of this course is to develop a disciplined process for addressing marketing issues and problems in a variety of settings, and to give students the tools and background necessary to think through marketing problems. The course helps in developing these skills in a deep-rooted manner so that students retain the marketing skills learnt through the course.

Course Contents:

UNIT I

Introduction to Marketing:

What is marketing? Understanding marketing and Customer needs, designing a customer Value -Driven Marketing strategy, managing customer relationships and capturing customer value.

UNIT II

Understanding Market Environment:

Analyzing macro and micro marketing Environment, The Demographic and Economic Environment, The Natural and Technological environment, PESTLE analysis.

UNIT III

Marketing Research:

Marketing Information and Customer Insights, Assessing Information Needs and developing data, Marketing research, Analyzing and using the Marketing Information, Other marketing considerations.

UNIT IV

Consumer Behavior:

Models of consumer behavior, Characteristics affecting consumer behavior, buying decision behavior and buying decision process, Buying decision process for New Products.

UNIT V

Segmentation, Targeting and Positioning:

Marketing strategy, Market segmentation, Market Targeting, Differentiation and Positioning.

UNIT VI

Marketing strategies:

Companywide strategic planning, Designing the Business Portfolio, Planning Marketing- Partnering to build customer relationships, marketing strategy and marketing mix, Marketing Return on investment.

UNIT VII

Product Strategy:

Various components of a Product strategy, Product Levels, Attributes, Product Life Cycle, New Product Development, Product Mix and Product Lines.

UNIT VIII

Pricing Strategy:

Price Sensitivities, Consumer Psyche on Price, Pricing Strategies, Initiation and response to Pricing variations.

UNIT IX

Distribution Channels, Retailing & Wholesaling:

Value Networks, How do Marketing Channels help material, money and information flow, Channel Design and optimizations, Managing channel conflicts.

UNIT X

Promotional Mix and Marketing Communications

Tools of Communication Optimization of Promotion Mix, Integrated Marketing Communications, Managing Media.

UNIT XI

Brand Equity / Brand Management

Definition and Building of Brand Equity, Brand Management tools, Measuring Effectiveness.

UNIT XII

Direct and E-marketing

Direct Marketing, Internet

Marketing Services

Service Industries, Marketing Strategy for service firms, Parameters – 7Ps, Managing Service Quality, Product Support Services.

Rural Marketing

Importance of Rural Marketing, Rural vs Urban Divide, Challenges in Rural Market, Strategies for Rural market, Changing face of rural consumer

Global Marketing & Competitive Marketing Strategy

Global marketing today, deciding how to enter the market, Deciding on global marketing Program

Sustainable, social and ethical marketing, Future of Marketing

Sustainable marketing, Social criticism of Marketing, Consumer actions to promote sustainable marketing, business actions towards sustainable marketing, Marketing Ethics and Sustainable company, New Trends, Holistic Marketing, Digital Marketing.

Group Presentations and Course wrap up

Group presentations and course conclusions

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Learn and understand the major marketing concepts and models learnt through the course,

CO2: Understand the importance of marketing as a function in a business organization,

CO3: Apply and relate to the linkages of marketing as a function to other functions within a business Organization,

CO4: Analyze the broad responsibilities of a marketer in different types of organizations,

CO5: Evaluate and assess the latest trends and research outcomes in marketing, and

CO6: Put in place a marketing plan given a company or situation.

Textbooks:

1. Principles of Marketing by Kotler & Armstrong, Pearson Education – 18th Edition.

Reference Books:

1. 1.MKTG by Lamb, Hair, McDaniel, Cengage Learning
2. 2.Marketing Management by Namkumari, Ramaswamy, Macmillan
3. 3.Marketing (Asian Edition) by Paul Baines, Chris Fill, Kelly Page, Oxford Education

Course Title	Production and Operations Management
Course Code (Credit)	BM31801 (L-T-P-Cr: 2-5-5-3)

Course Objective:

Students have to understand the production and operation functions and familiarize themselves with the techniques for planning and control.

Course Contents:

UNIT I

Introduction to Operations Management

Concept, Input-Output Model, System view, Interface with other functional areas.

UNIT II

Facility & Location Layout

Facility location, Facility layout, Selection, Feasibility, Economy, Types, Design of layout.

UNIT III

Materials Management

Introduction – Scope, Function, Planning (MRP), Purchasing, Inventory Management, Standardization, Simplification, Material Handling – principles, Equipments, Systems.

UNIT IV

Production Planning & Control

Aggregate Planning, Capacity planning, MPS, MRP, ERP, JIT, Scheduling, Routing

UNIT V

Quality Management

Concept, Strategy, Factors, Dimensions, Cost of Quality, Quality Inspection & Assurance, Quality Performance & Conformance, Quality Control – SPC, SQC, Quality Circle, TQM, ISO 9000

UNIT VI

UNIT VII

Motion & Time Study

Productivity, Method Study, Motion Study, Time Study, Ergonomics

UNIT VIII

Maintenance Management

Breakdown and Preventive maintenance, Total Productive maintenance (TPM)

UNIT IX

Waste Management

Managing Disposal, Salvage & Recovery of Waste

UNIT X

Automation

Concept, Advantages, Disadvantages, AGVS, AS/RS

Course Outcomes:

Upon completion of this course, the students will be able to:

CO 1: Remember the basic concepts of production and operation functions,

CO 2: Understand the principles of work method and motion study,

CO 3: Apply the decision framework for deciding facility and location,

CO 4: Analyze the quality dimensions and process for product and measurement processes,

CO 5: Evaluate and differentiate different production systems, and

CO 6: Develop their ability to appreciate the materials and production planning steps.

Course Title	Sustainable Rural Development
Course Code	RM30152 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Sustainability has become an important aspect of our lives in the wider context of the United Nations' Sustainable Development Goals (SDGs). This course aims to provide the participants knowledge on how the rural communities can achieve sustainable form of development. Apart from discussing about the various concepts related to sustainable development of rural areas and three pillars of

sustainability such as society, environment and economy, the course will also focus on building multi-stakeholder partnerships to achieve sustainable rural development. The Sustainable Development Goals 3, 4, 5, 6, 7, 8, 9, 12, 15, 16 and 17 are integrated in the course.

Course Contents:

UNIT I

Understanding sustainable development:

Concepts of rural, development, rural development, integrated rural development, sustainable development, equitable and inclusive development, sustainable rural development and three pillars of sustainability-social, environmental and economic dimensions, possibilities and hindrances towards sustainable rural development and Sustainable Development Goals (SDGs)

UNIT II

Equitable and sustainable rural social development:

Crosscutting issues such as rural poverty, its causes, dimensions and reduction, ethnicity, gender, quality education, health care and social services, people's participation for sustainable rural development, building the ability of households and communities to consistently meet the basic needs, social inclusion and inclusive development, people centered development, women and youth empowerment, Human Development Index (HDI), Human Poverty Index (HPI) and Gender Development Index (GDI)

UNIT III

Economy and sustainable rural development:

Full and sustainable employment of rural population, improved quality of life, definition and meaning of rural livelihoods, sustainable rural livelihoods framework, financial security of individuals, building financial assets and sustaining adequate income throughout the life-span, concepts of rural nonfarm-off farm, role of off farm and non-farm in rural development, development of local Small and Medium Enterprises (SMEs) as a means to industrialize the rural areas and building a local economic system of agro-industrial integration

UNIT IV

Environment and sustainable rural development:

Sustainable agricultural systems, optimizing agricultural and non-farm sector production, environmentally harmonious/judicious use and sustainable management of land, water, forest, air and other natural resources, fair and transparent natural resources governance, restoration and conservation of natural ecosystems, environmentally sustainable technologies covering renewable energy, energy efficient technologies, sustainable waste management and biomass conversion

UNIT V

Partnerships for sustainable rural development:

Community participation, community action, community mobilization, collaboration and partnership between various community networks such as Self Help Groups (SHGs), Community Based Organizations (CBOs), voluntary organizations, Panchayati Raj Institutions (PRIs), rural cooperatives, farmer producer organizations, youth clubs and women organizations to plan and participate in implementing sustainable rural development programmes, implement and contribute for policy making for sustainable rural development

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Understand on the need for sustainability in the rural areas,

CO2 : Understand the relevance of social aspects of sustainable rural development,

CO3 : Appreciate the importance of economic dimensions of sustainable rural development,

CO4 : Comprehend the relationship between environment and other dimensions,

CO5 : Attain skills to build multi-stakeholders partnerships for sustainable rural development, and

CO6 : Draw up a plan for achieving sustainable development in rural areas.

Reading Materials

1. A set of reading materials from various Textbooks:/research articles to be compiled

Course Title	Food Security
Course Code	RM20152 (L-T-P-Cr: 3-0-0-3)

Course Objectives:

The major objective of the course is to understand the causes, consequences of food insecurity and learn how local communities, governments and international institutions have been combating food insecurity and hunger. The other objectives of the course are to enlighten the participants on what they can undertake as individuals, decision and policy makers to ensure food security.

Course Contents:

UNIT I

Concepts of Food Security:

Food security and hunger in a global perspective, concepts of food and nutritional security, human right to food and adequate nutrition, food security and diet as a means of achieving global health targets, definition of food insecurity and its types-chronic and transitory food insecurity, four dimensions of food security - food availability and accessibility.

UNIT II

Challenges in Achieving Global Food Security:

Uneven distribution of food and other basic resources in the world, sustainability of food production and consumption, competing uses – bio-fuels' competition for land, water and energy resources and implication for food security, co-existence of genetically modified food, organic and conventional food crops and food security; complex emergencies, disasters, Covid-19, conflicts, protracted crises, gender and racial/ethnic inequality, poverty and food security; food insecure sections in vulnerable situations, limited food resources, increasing world population, growing world food demands, liberalization of food markets, international trading, climate change and the food security systems.

UNIT III

Global Strategies to Overcome Food Insecurity and Hunger:

Alternative methods to achieve food security, elimination of food waste at all levels, globalization of food supply, global movements for food justice, delivering food subsidy, public and private sector's roles in food production, regulation and supply, multidimensional nutrition programs, FAO food security policies, community, household and family food insecurity coping strategies, adaptive responses of food security systems for climate change, global early warning and emergency food monitoring and management systems

UNIT IV

Food Security in the Indian Context:

Availability and accessibility of food in India, post-Green revolution status of food security, lack of access to food in India, hunger and starvation deaths, data on per capita daily supply of calories, child malnutrition, undernourished, anemic, India's status on Global Hunger Index and Global Food Security Index, NFHS data and heat maps, provisions related to right to food in Indian Constitution, impact of Covid-19 on food supply chains and food security

UNIT V

India's Policies and Programmes to Eliminate Hunger and Food Insecurity

Food security systems in India, Food for Work, Integrated Child Development Services (ICDS) Schemes, Mid-Day Meal Scheme (MDMS), Public Distribution System (PDS), Targeted Public Distribution System (TPDS), Pradhan Mantri

Garib Kalyan Anna Yojana (PMGKAY) and the Pradhan Mantri Poshan Shakti Nirman Yojana (PM POSHAN Scheme), diversifying PDS food basket, *Aadhaar* biometric identification system for food security, *Antyodaya Anna Yojana (AAY)* to reduce hunger among the poorest, National Food Security Mission, Right to Food Legislation in India, National Food Security Act, (NFSA) 2013, its norms and salient features, priority households (PHHs), promotion of fortified food products, millets for food security and nutrition, State Food Commissions, obligations of Central, State and Local governments for food security and role of cooperatives in India's food security.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Have a systematic understanding on various concepts and discussions related to food security from multiple perspectives,

CO2 : Demonstrate a critical awareness of the local, regional, national and global challenges encompassing social, political, global and economical contexts related to achieving food security,

CO3 : Exhibit a wide-ranging understanding on the global strategies to overcome food insecurity,

CO4 : Comprehend the food (in)security in the Indian context ,

CO5 : Critically analyze the India's policies and programmes to address food security,

CO6 : Capable of assessing the food security status of individuals, households, local areas, and regions, countries and world and develop solutions to address food insecurity.

Reading Materials:

Course Title	Health And Wellbeing
Course Code	PE10001 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The course is designed for non-health science students to sensitize them about health and well-being which is very important to lead a socially and economically productive life. The course will help the student to assess their own health and well-being status as well as those of others.

Course Contents:

UNIT I

Concept of Health, Disease & Wellbeing:

Definition of health, disease & wellbeing; evolving concepts and dimensions of health, Individual health vs community health, Community Diagnosis, Health and well-being of the vulnerable

UNIT II

Factors Affecting Health & Well-being:

Social & behavioral determinants of health & wellbeing; vicious cycle of disease & poverty, enabling environment for health, Role of the health system and health services in ensuring health & wellbeing

UNIT III

Approaches to Positive Health and Wellbeing:

Theoretical models of health promotion and their relationship with the concept of wellbeing, Health Behavior Change models to understand and improve the health and well-being of people, Importance of mental health & wellbeing

UNIT IV

Measurements of Health, Disease, and Wellbeing

Morbidity, mortality, health-status assessment (incidence, prevalence, cumulative incidence, incidence rate), Newer measures of health and disease: QALY, DALY, HYL etc., Vital health indicators at the population level (Life expectancy, CBR, CDR, IMR, MMR, CPR, etc), Measures of functioning (physical,

cognitive, emotional, and social), Concept of social capital, measures of satisfaction with Life: Satisfaction With Life Scale (SWLS)

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Recognize concepts of health, disease and wellbeing,
- CO2 : Differentiate between health and wellbeing,
- CO3 : Analyze the factors affecting health and wellbeing,
- CO4 : Identify tools for measurement of wellbeing,
- CO5 : Apply the tools to measure their wellbeing, and
- CO6 : Design an intervention to ensure their health and Wellbeing.

Course Title	Law Of Patent
Course Code	LW30910 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Patents contribute, preserve and channelize value for enterprises ranging from the world’s largest technological corporations to start-up entities. Apart from economic gain by rendering competitive and transactional advantage, Patents have a remarkable effect in spurring innovation, research and dissemination of knowledge. The student of this Course will develop a clear understanding of the law relating to Patent practice and procedure, and will imbibe skills for applying the law for patent prosecution and transactions.

Course Contents:

UNIT I

Patentability And Patent Eligibility:

Novelty Requirement; Inventive Step Requirement; Industrial Applicability Requirement; Patentable and Non patentable subject matter and Product & Process patent.

UNIT II

Patent Prosecution:

Application for patent, Publication and Examination, Specification - Provisional and Complete; Contents of specification; Objection and Pre-Grant and Post-Grant Opposition.

UNIT III

Patent Grant:

Sealing and granting of patents; Withdrawal and abandonment of application; Duration of patent: Law and policy consideration and Rights and obligations of a patentee.

UNIT IV

Compulsory licenses, revocation and surrender of patent:

Abuse of Patent Rights; Compulsory Licenses; Grounds for granting compulsory licenses; Matters to be considered in granting compulsory licenses; Revocation of Patent- who may apply? And Different grounds for and modes of revocation.

UNIT V

Patent Enforcement And Defences:

Infringement- Meaning and the scope; Burden of proof; Modes of infringement; Doctrine of colourable variation; Doctrine of Pith and marrow; Doctrine of equivalents and Defenses in suits of infringement of patent;

UNIT VI

Introduction To Patent Law And International Agreements:

Definition, nature and object of granting patent; Development of Patent jurisprudence; Paris Convention and Patents; An overview of TRIPS(only relevant provisions for Patent); Patent Co-operation Treaty(PCT) and Budapest Treaty;

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 :Explain the origin, development and significance of patent law and its significance in commercial transactions and value addition to enterprises,
- CO2: Apply preliminary advisory and negotiation skills useful for commercial transactions involving patents,
- CO3 :Analyze better employability in this field of intellectual property law through skill oriented training,
- CO4 :Evaluate the problem-solving skills for the topics learnt,
- CO5 :Develop critical thinking to impart basic skills required in litigation involving patents, and
- CO6: Understand and analyze the remedies and defenses in case of patent litigation.

Textbooks:

2. Merges & Duffy, Patent Law & Policy: Cases and Materials, Lexis Nexis 5th ed. (2011)

Course Title	Law Of Contract
Course Code	LW30904 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This subject is designed to enrich the basic knowledge of engineering students in the field of law and to support the engineering and research programs. To introduce the basic understanding of the General Principles of Law of Contract-I so that students develop an understanding various features of contract. The subject will also help the students to develop knowledge about Indian Contract Act to understand the nature of agreements and remedies for breach of contract.

Course Contents:**UNIT I****Fundamental Concepts & Formation Of A Contract:**

Basic concepts of contract, offer and acceptance, certainty; intention to create legal relations, consideration, promissory estoppel, third parties

UNIT II**Vitiating Factors:**

Duress and coercion, Undue influence, Misrepresentation, Non-disclosure and fraud, Mistake

UNIT III**Nature Of Agreement:**

Quasi-contracts and contingent contracts

UNIT IV**Discharge Of Contracts:**

By performance, by agreement, by breach, by frustration

UNIT V**Remedies For Breach Of Contract:**

General concept of damages, Money damages, Restitution, Specific performance and Equitable relief

UNIT VI

Electronic Contract:

How e-contracts are formulated, Basic genres of e-contract; the click wrap, the shrink wrap

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Learn the basic concepts of Law of Contracts and principles of common law and how common law provisions have been adopted in the Indian Contract Act, 1872,

CO2: Understand the vitiating factors for contract which render them void or voidable,

CO3: Understand the nature of agreements,

CO4: Analyze different modes of discharge of contract,

CO5: Understand the remedies for breach of contract, and

CO6: Learn the different types of E-contract

Textbooks:

Course Title	Intellectual Property Rights (Ipr) Law
Course Code	LW30908 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Keeping the fact in mind that the present subject would be taught to the students as a general paper, the main object behind teaching this subject is to make the students understand IPR as a concept and the different forms of IPR. The course would be more of informative in nature to help the students appreciate the whole idea of protecting human labour through exclusive rights in the form of intellectual property rights and to help them to generate interest in the subject for further research.

Course Contents:

UNIT I

Law Of Copyright

Introduction; Nature of Copyright; Basic features of copyright; Originality, Idea-expression dichotomy and Authorship ownership and Works in which copyright subsists

UNIT II

Law Of Patents

Introduction to Patent, Nature of Rights, Patentability standards - Patentable subject matter; Patent Registration; Patent term and enforcement.

UNIT III

Trademarks

Basic concept of trademarks; Conceptual Analysis; Need for trademark protection; Registration of Trademarks, Registration of Trademark- who may apply? And Enforcement of Registered Trademarks.

UNIT IV

Geographical Indications:

Introduction, Geographical Indications and Trademarks, Procedure for registration of Geographical Indications; Effect of Registration; Enforcement of registration of Geographical Indications.

UNIT V

Designs:

Definition, nature and object of granting designs ; Procedure for registration of designs; Effect of Registration; Enforcement of registration of Designs.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Explain the origin, development and significance of intellectual property law and its significance in commercial transactions and value addition to enterprises,
- CO2: Equip with specific technical, legal and management skills related to protection, enforcement and commercialization of the various forms of intellectual properties,
- CO3: Analyze better employability in this field of intellectual property law through skill oriented training,
- CO4: Evaluate the problem-solving skills for the topics learnt,
- CO5: Develop critical thinking to impart basic skills required in issues pertaining to intellectual property rights, and
- CO6: Understand and analyze the remedies and defenses in case of Intellectual Property litigation.

Textbooks:

Course Title	Environmental Law
Course Code	LW30914 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The basic objective is to familiarize the concept and scope of environmental law and also of its particular dominant issues so as to become a value addition in learning and to ignite academic/research interest, eventually.

Course Contents:**UNIT I****Introduction & Fundamental Principles Of Environmental Protection:**

Concept of Environment – Meaning and Scope; Development v. Environment; Sustainable Development – Meaning, Definition, Object and Scope; Environmental Ethics; Inter-generational and Intra-generational Equity; Precautionary Principle, Polluter Pays Principle, Public Trust Doctrine.

UNIT II**Constitutional Perspective Of Environmental Laws:**

Right to Healthy Environment & Public Interest Litigation; Fundamental Rights & Duties - Right to Wholesome Environment; Directive Principles of State Policy.

UNIT III**International Environmental Law:**

International environmental law - Nature and scope, Stockholm declaration & Rio declaration, UNFCCC & recent developments

UNIT IV**Water Pollution & Air Pollution:**

The Water (Prevention and Control of Pollution) Act, 1974 & The Air (Prevention and Control of Pollution) Act, 1981; Water Pollution & Air Pollution – Meaning,

Causes and Effects; Central and State Pollution Control Boards –Constitution, Powers and Functions; Offenses & liabilities of Companies; Future usage of alternative energy

UNIT V

Environmental Protection:

The Environment (Protection) Act, 1986; Meaning of “Environment” and Environmental Pollutant”; Powers and Functions of the Central Government; Environmental Impact Assessment,(EIA); National Green Tribunal Act.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 :Understand the Jurisprudence behind the development of environmental law and the underlying principles behind the development of such law,
- CO2 : Understand the Constitutional obligations over the Government as well as the citizen in regard to improvement and protection of environment,
- CO3 : Understand the origin, evolution and expansion of international environmental law and will be able to identify and critically analyse international environmental law instruments,
- CO4 : Analyze the various environmental pollution and pollutants as provided under the National legislation vis-a-vis the international approach in defining the above,
- CO5 : Provide an insight on the objectives of the Environment Protection Act, the role of governmental authorities, and
- CO6 :Understand and analyze the legal precaution and remedies in case of Environmental hazards.

Textbooks:

Course Title	Copyright Law
Course Code	LW30918 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Copyright is a right given by the law to the creators of literary, dramatic, musical and artistic works and producers of cinematograph films and sound recordings. In the wake of technological developments and growth of digital communication, the concept of Copyright which was mainly restricted to Literary works has expanded to cover 'Neighbouring Rights' consisting of rights of performers, producers of phonograms and broadcasting organizations. The main motivation of law relating to copyright is to encourage and reward authors, composers, artists, designers, film producers and other creative people by providing protection through economic rights over their works.

Course Contents:**UNIT I****Copyright And International Legal Instruments Relating To Copyright Protection:**

Concept of Copyright as a protection under the Intellectual Property law regime, Berne Convention for the Protection of Literary and Artistic Works, 1886, Universal Copyright Convention, 1952, Rome Convention for the Protection of Performers, Producer of Phonograms and Broadcasting Organizations, 1961: Neighbouring Rights, Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS), 1994: Background, Enforcement and Impact, WIPO Copyright Treaty, 1996, WIPO Performances and Phonograms Treaty, 1996;

UNIT II**Historical Development Of Copyright As IPR:**

Development of Copyright Law in India, Development of Copyright Law in U.K., Development of Copyright Law in U.S.A, Concept of Copyright and Copyleft with respect to Copyright protection;

UNIT III**Subject-Matter Of Copyright And Rights Conferred:**

Concept of Originality in U.S.A, U.K. and India, The Idea and Expression Dichotomy, Copyright in Original and Derivative Works, Moral Rights of the Authors, Assignment, License and Registration;

UNIT IV**Protection Of Copyright In Cyberspace:**

Concept, Acts and Uses in the Internet and their Copyright Implications, Right of Reproduction of work on the

Internet, Liability of Internet Service Providers, Copyright in the Music Industry, Concept of Copyright Protection in U.S.A.-Digital Millennium Copyright Act: Fair Use and Safe Harbor;

UNIT V

Infringement And Defences Of Copyright Liability:

Infringement under Indian Law and tests for determining Copyright Infringement, Fair Dealing, Copyright law and Education: Concept of Copyright in Academics and Research in India;

UNIT VI

Enforcement Of Copyright:

TRIPS Agreement and the Mandate on Enforcement, Judicial Remedies in India: Civil and Criminal.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Explain the origin, development and significance of copyright law and its significance in commercial transactions,
- CO2 : Apply preliminary policies derived from critical-analytic reasoning over selected portions of the Copyright Act, International Treaties and relevant case laws decided by National and Foreign Courts,
- CO3 : Analyze better employability in this field of copyright law through skill oriented training,
- CO4: Evaluate the problem-solving skills for the topics learnt,
- CO5 : Develop critical thinking to impart basic skills required in litigation involving copyright law, and
- CO6 : Understand and analyze the remedies and defenses in case of Copyright litigation

Textbooks:

1. P. Narayanan, Law of Copyright and Industrial Designs (4th ed. Eastern Law House, 2010)

Reference Books:

1. Melville B. Nimmer and David Nimmer, Nimmer on Copyright Law (LexisNexis, Indian reprint 2010)
2. Lal's Commentary on The Copyright Act, 1957(4thed. Delhi Law House, 2010)

Course Title	Information Technology Law
---------------------	-----------------------------------

Course Objective:

The first and foremost object of the course is to introduce the student to the general principles of Information & Communication Technology Law and then help them in understanding the nuances and its application. In other words the chief object of the course is learning & understanding the fundamental principles of Internet Law.

Course Contents:**UNIT I****Introduction to Cyber Law**

Need and scope of cyber law, Growing concerns relating to cyberspace and cyber technology, Important definitions under Information Technology Act (IT Act), Theories of jurisdiction in cyberspace

UNIT II**Civil liabilities and adjudication under Information Technology Act 2000:**

Cyber torts and contraventions, Adjudication under the Information Technology Act 2000, Judicial and Quasi-Judicial bodies under IT Act, Dispute Resolution under IT Act

UNIT III**Cyber Crimes**

Introduction to Cyber Crimes, Cyber Crimes vs. Conventional Crime. Classification of Cyber Crimes, Cyber Crimes under IT Act- Sec 65- Tampering with the Source Code, Sec 66- Computer related crimes , Sec 67,67A & 67 B- Pornography , Sec 69- Decryption of Information, Sec 70- Protected System, Cyber Crimes not listed under IT Act- Hacking, Email Spoofing and Email bombing, Online Defamation, Cyber Stalking, Phishing, Viruses , Denial of service attacks

UNIT IV**Regulation of E-Commerce:**

Legal recognition of electronic records under IT Act, , Validity of digital contracts

UNIT V**Electronic Signature and Digital Signature:**

Electronic Signatures, Cryptography, Public and Private Key, Verification of Digital Signature, Public Key Infrastructure, Electronic Signature and Information Technology Act, 2000.

UNIT VI

E-Governance:

Components of E Governance, Types of interactions in E Governance (Interactive Models like G2G, G2B, G2C), Benefits of E Governance, E Governance challenges specific to India, Legal Frame work for E Governance under IT Act,2000, Various E-Governance Projects in India

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Learn different national and international principles that are involved in regulating the jurisdiction of Cyberspace,
- CO2: Develop knowledge and understanding of the different cyber contraventions and adjudication Process,
- CO3: Understand the interface between ICT law and commercial law and practice in that it examines in detail the closed sub-set of online transactions which are clearly commercial in nature,
- CO4: Develop a critical approach and will introduce students to techniques and technologies for monitoring cybercrime and the legal regulatory framework.
- CO5: Understand the various aspects of electronic signature and digital signature, and
- CO6: Understand and analyze the remedies and defenses in case of cybercrimes.

Textbooks:

Course Title	Foundations Of Modern Macroeconomics
Course Code	HS30150 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of this course is to teach students the principles of economics of aggregates so they can apply these ideas to their own lives and the world in which they live.

Course Contents:

UNIT I

National Income and its measurement:

Introduction to National Income, Concepts of GDP, GNP, GDP Gap, GDP Deflator and national income, Comparison of GDP deflator with CPI, Rules and Methods of Measurement of GDP (Income, expenditure and Out Put method), Circular Flow of Income and expenditure both in close and open economy..

UNIT II

General Equilibrium:

Introduction of AD & AS. Derivation of product market equilibrium (IS curve) and money market equilibrium (LM curve) – equilibrium in IS-LM Model, Effectiveness of Monetary and Fiscal Policy, Crowding-Out Effect.

UNIT III

Inflation and Unemployment:

Measuring Inflation rate and Unemployment rate; The Phillips relation – The expectation augmented Philips curve – The natural rate of unemployment hypothesis The Relation between GDP Gap, Inflation rate and unemployment Gap, Okun's Law.

UNIT IV

Theories of consumption and Investment:

Keynesian and Post Keynesian: Consumption function, Marginal Efficiency of Capital, theories of consumption –Absolute, relative, permanent and life cycle income hypothesis.

Keynesian and Post Keynesian theories: The decisions to invest- Autonomous and Induced investment, MEI schedule. Multiplier and accelerator theories of Investment. Neo-classical theory of investment (Jorgensen)

Course Outcomes:

Upon completion of this course, the students will be able to

- CO1 : Introduce themselves to the basic principles of macro economics,
- CO2 : Explain the circular flow model and use the concepts of aggregate demand and aggregate supply,
- CO3 :Understand the basic economic problems of inflation, unemployment, poverty and their remedies through macro insights,
- CO 4: Evaluate the relevance of macro variables in policy making,
- CO5 : Relate the corporate functioning to macroeconomic indicators, and
- CO6 : Define fiscal and monetary policies and how these affect the economy.

Course Title	Money And Financial Markets
Course Code	HS 30152 (L-T-P-Cr: 3-0-0-3)

Course Objective:

To give the students a basic understanding of the Indian financial market, to familiarize students with Money Market and its sub markets and the regulatory framework in the Indian Financial system.

Course Contents:

Money: concept, functions, measurement; theories of money supply determination. High Powered Money. Money multiplier and accelerator theory. Cryptocurrency

Financial institutions, markets, instruments, and financial innovations. Role of financial markets and institutions; problems of adverse selection and moral hazard; financial crises Money and capital markets: organisation, structure, and reforms in India; role of financial derivatives and other innovations

Interest rates Determination; sources of interest rate differentials; theories of term structure of interest rates; interest rates in India.

Banking System Balance sheet and portfolio management Indian banking system: changing role and structure; banking sector reforms. Central banking and monetary policy.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Explain why people hold money and why it is used in the trading process

CO2: Explain the impact of money multiplier and accelerator

CO3: Describe and explain the role of interest rate in an economy.

CO4: Discuss the role of financial institutions in strengthening the economy.

CO5: Describe and explain the main channels of the monetary

transmission mechanism, through which monetary policy can have real effects on the economy

CO6: Discuss the merits and disadvantages of different monetary policies used by Central Banks

Textbooks:

Course Title	Poverty To Prosperity
Course Code	HS30154 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This course studies poverty related issues from the economic perspective.

Course Contents:

UNIT I

Introduction to the concept of poverty:

Underdevelopment; Meaning and Indicators ,Common Characteristics of Developing Countries,The Concept of Poverty and poverty Line, Determinants and indicators of poverty, Incidence of Poverty, Tools to Measure Poverty;Headcount Ratio, Poverty Gap Ratio & Sen Index.

UNIT II

Multidimensional poverty:

Dimensions of Poverty, Multidimensional poverty, Measuring multidimensional poverty, Global Multidimensional Poverty Index, Multidimensional Poverty Index and SDGs.

UNIT III

Poverty and Unemployment:

Problem of Unemployment, Nature and Estimates of Unemployment, Unemployment in Urban Areas, Agricultural Unemployment, Causes of Unemployment, Government Policy for Removing Unemployment, Major Employment Programmes .

UNIT IV

Poverty and planning process:

Poverty Alleviation Programmes and Policies: Meaning, Measuring BPL in India, Poverty Alleviation in India- Five Year Plans, , Poverty Alleviation Programmes , Strategy of Poverty Alleviation.

UNIT V

Data analysis:

Recent budgetary policies and programs relating to concepts of poverty; Analysis of Economic Survey data.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Gain contextual knowledge on concept of poverty.

CO2 : Understand Indicators and Issues related to poverty.

CO3 : Examine links between poverty and well-being.

CO4 : Understand the relation between Poverty and unemployment.

CO5: Create sound knowledge about Poverty Alleviation Programmes and Policies.

CO6 :The ability to engage in critical thinking as a part of the analysis of economic problems and problem-solving potentiality as well.

Course Title	Organizational Change And Development
Course Code	HS30250 (L-T-P-Cr: 3-0-0-3)
Pre-requisites	HS30250

Course Objective:

The primary objective of the course is to understand the importance of organizational change and the need to respond to the changes in the industry. It also focuses on imparting the knowledge of organization development concepts, tools and techniques that are meant for improving the functioning of individuals, groups and organizations. The aim of the course is to develop the application of behavioral science concepts to the functioning of the organization development.

Course Contents:

UNIT I

Organizational Change:

Organizational Change: Concept and Significance; Managing Change; Concept of Analyzing the Environment; Perspectives on Change: Contingency; Resource Dependence; Population Ecology; Implications of Change.

UNIT II

Types of Change:

Types of Change: Continuous or Incremental Change; Discontinuous or Radical Change; Participate Change and Directive Change; Change Levers; Levels of Change: Knowledge Changes; Attitudinal Changes; Individual Behaviour Changes and Organizational Performance Changes.

UNIT III

Implementation of Change:

Implementing Change : Steps-Assembling a Change; Management in establishing a new direction for the organization; Setting up of change teams and promoting

innovation; Aligning structure; Systems and resources; Removing road blocks; Absorbing changes into organization; keys to create a cultural change

UNIT IV

Organizational Growth and Development:

Introduction to organizational growth and development; Historical Overview of OD (Laboratory Training, Survey Research, Action Research, Socio-technical systems); OD Values, Beliefs and Assumptions for individuals, Groups and Organizations; Role of OD Consultants – Styles, relation with client, entry strategies

UNIT V:

Organizational Development Interventions

OD Interventions: Overview, characteristics of effective Interventions, Individual Level , Team & Group Interventions; Human Resource Interventions □(Performance Management, Reward Systems, Career Planning); Techno-Structural Interventions □ (Restructuring Organizations, Down sizing Employee Involvement , Work Redesign , Total Quality Management); Strategic Interventions □(Mergers and Acquisitions , Strategic Alliances and Joint Ventures, Organization Transformation); Indian Experiences of OD in Public and Private Enterprises.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Respond and anticipate the needs of change in a proactive way,
- CO2: Understand various levels and categories of change to develop appropriate intervention into the system,
- CO3: Apply the OD concepts, tools and techniques for improving the performance of individual, groups and organization in change process,
- CO4: Analyse and overcome the challenges in the change process,
- CO5: Explain the assumptions, beliefs and values of organizational development, and
- CO6: Implement behavioral science knowledge to bring changes in organizational strategies, structures, and processes.

Textbooks:

1. Organization Development and Change by Thomas Cummings and Christopher Worley - Cengage Publications, 2015.
2. Organizational Change and Development by Dipak Bhattacharya, Oxford Publishing House, 2011
3. Managing Organizational Change- a multiple perspective approach by Ian Palmer, Richard Dunford, David A, Buchanan, Mc Graw Hill, 2016

Reference Books:

1. Organization Development: Behavioral Science Interventions for Organizational Improvement, by Wendell L French, Cecil H Bell - Pearson publications.
2. Organizational Change and Development, Kumkum Mukherjee, Pearson Publications, 2015

Course Title	Indian Literature In Translation
Course Code	HS30050 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The course aims to create awareness among the students, of the rich and diverse literary cultures of ancient, medieval and modern India. It would enable the students to appreciate the Indian classical literature, discuss Indian society post partition and understand the importance of devotion and dedication in human life.

Course Contents:

Translation : A Brief Overview: What is translation? Types of translation

Epics

- A short section from *The Mahabharata* – Draupadi’s humiliation
- A short selection from *Kamba Ramayana* – Sita’s humiliation

Short Story

- A story from *Panchatantra*
- A story from Jataka
- Premchand – a story
- Sadat Manto- Toba Tek Singh

Poetry

- Sections from *Meghadutam*, Kalidasa
- Bhakti poems – Mira Bai, Kabir, Bhima Bhoi
- Urdu tradition – Ghalib, Bahadur SahaZaffar
- Gitanjali – a few poems

Biography

- A selection from *Harshacharita*
- A short selection from *Akbarinama*

Play

- Bhasa – Urubhanga (short play – linked to section from Mahabharata)

- Mohan Rakesh – a section of his play(*AdheAdhure*)

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Record the masterpieces in Indian classical literature.
 CO2 : Explore images in literary productions that express the writers sense of their society.
 CO3 :Imbibe the virtue of sacrifice , passions, integrity, tolerance and selflessness
 CO4 :Compare English literature and Indian classical literature
 CO5 :Appraise the richness of Indian culture and the quality of the translated works
 CO6 : Familiarize with the mechanism of translation

Reading Materials:

Course Title	Climate Change Narratives
Course Code	HS30052 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of this course is to study climate fiction to demonstrate new ways of thinking about climate change and invoke opportunities for imagining more just and resilient futures. This course will enable skills for thinking, writing, and speaking critically about *both* literature *and* climate change. Moreover, it will enable the learners to analyze the specific formal and stylistic conventions of literary and cultural texts and situate those texts within broader debates and discourses—scientific, historical, and political—about climate change.

Course Contents:

UNIT I

Introduction to Climate Change:

- The New Climate War: The Fight to Take Back Our Planet, Michael E Mann
- Time Capsule Found on the Dead Planet, Margaret Atwood
- The Drowned World, JG Ballard
- Environmental Crisis and Hindu Religion, O.P. Dwivedi and B.N. Tiwari.

UNIT II

Impacts of Climate Change:

- “Evidence for Climate Change,”: Explore the CEEW project (Blog)Research present or future climate change impacts in your own community.

- “Diary of an Interesting Year,” Helen Simpson “The Tamarisk Hunter,” Paolo Bacigalupi
- “The Weatherman,” Holly Howitt
- Living Mountain: The Fable of our times “Amitav Ghosh

UNIT III

Language of Climate Communication in Literature

- I’m not a plastic bag, Rachel Hope Alison
- Leila, Prayag Akbar

Course Outcomes:

Upon completion of this course, the students will be able to

CO1: Draw on relevant political, historical, and scientific information to place literary and cultural texts within wider debates and discourses about climate change,

CO2: Identify how literary and cultural texts complement or challenge understandings of climate change,

CO3: Reflect on understandings of and feelings about climate change,

CO4: Employ logic, creativity, and interpretive skills to produce persuasive and imaginative arguments about literature, culture, and climate change,

CO5: Create a report on climate concerns, and

CO6: Evaluate the impact of climate change on the local communities.

Textbooks:

1. Rachel Hope Alison. *I’m Not a Plastic Bag*. New York: Archaia, 2012. ISBN-10 : 1936393549
2. Prayag Akbar. *Leila*. Simon and Schuster, 2017. ISBN 978-0-571-34133-7
4. Ed. by Mark Martin (Editor), Bill McKibben (Introduction), Margaret Atwood (Contributor), Paolo Bacigalupi (Contributor), T.C. Boyle (Contributor). *I’m With the Bears: Short Stories from a Damaged Planet*. Verso, 2011. ISBN-10 : 9781844677443.
5. J.G. Ballard. *The Drowned World*. Reprint Fourth Estate: United Kingdom. ISBN-0007221835
6. Amitav Ghosh. *Living Mountain: The Fable of Our times*. India: Fourth State India. 9354898874
7. Michael E Mann. *The New Climate War: The Fight to Take Back Our Planet*. USA: Public Affairs. 1541758234
8. O.P. Dwivedi and B.N. Tiwari,
9. *Environmental Crisis and Hindu Religion*, NewDelhi: Gitanjali Publishing House, 1987

Reference Books:

1. Maslin, Mark. *Climate Change: A Very Short Introduction*, Third Edition. Oxford: Oxford UP, 2014. ISBN: 9780198719045

Course Title	Introduction To Science Fiction
Course Code	HS30054 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Introducing students to science fiction literature, both classic and contemporary. The aim is to nurture an interest in literature for those who already have it, and to create interest for those who do not, through a genre of literature that may be more relevant and exciting to them than old classics. Texts will deal with fictional representations of dystopia, artificial intelligence, theories of technology, cyberpunk, and alternative reality.

Course Contents:

UNIT I

Early Science Fiction, Emergence through 1917

Text: Jules Verne & Michel Verne, 'In the Year 2889' (1889)

Definition of science fiction, timeline of science fiction, categories of science fiction

Supplementary reading: H. G. Wells, 'The Chronic Argonauts' (1888)

UNIT II

Science Fiction between the Wars, 1918-1939

Text: E. M. Forster, 'The Machine Stops' (1928)

Science fiction as expression of potential; eutopia and dystopia

Supplementary reading: Murray Leinster, 'Proxima Centauri' (1935)

Supplementary viewing: Fritz Lang, *Metropolis* (1927)

UNIT III

The Golden Age and the Atomic Age 1940-1963:

Text: C. L. Moore, 'No Woman Born' (1944)

Science fiction exploring alienness and mutation

Supplementary reading: Isaac Asimov, 'Nightfall' (1941), Judith Merrill, 'That Only a Mother' (1948)

Supplementary viewing: Ishiro Honda, *Godzilla* (1954)

UNIT IV

New Wave and Reaction, 1963-1983:

Text: Philip K. Dick, 'We Can Remember It for You Wholesale' (1966)

Humanity and human-machine division, beginnings of artificial intelligence, gender and its social implications in science fiction

Supplementary reading: James Tiptree Jr., 'The Girl Who was Plugged In' (1974)

Supplementary viewing: Ridley Scott, *Blade Runner* (1982)

UNIT V

Cyberpunk, 1984 and Onwards:

Text: William Gibson, 'Johnny Mnemonic' (*Burning Chrome*, 1986)

Exploring artificial intelligence, alternate self, and alternate reality

Supplementary reading: Douglas Adams, 'Young Zaphod Plays it Safe' (1986)

Supplementary viewing: Barry Sonnenfeld, *Men in Black* (1997), Mamoru Oshii, *The Ghost in the Shell* (1995)

UNIT VI

Contemporary Trends:

Text: Manjula Padmanabhan, 'Flexi-time' (2019)

Science fiction in contemporary times, Indian science fiction, science fiction as series

Supplementary reading: Ruhan Zhao, 'My Left Hand' (2017)

Supplementary viewing: Charlie Brooker, *Black Mirror* (2016-present), Choi Hangyong, *The Silent Sea* (2021), Chris Renaud & Pierre Coffin, *Despicable Me* (2010)

Course Outcomes:

Upon completion of the Course, the students will be able to

CO1: Understand the concept of genre literature,

CO2: Acquire knowledge of the important concepts of science fiction ,

CO3: Learn methods of textual analysis and critique ,

CO4: Recognise the role of popular and commercial literature in everyday life,

CO5: Identify the role of technology and ethics in real-life future, and

CO6: Develop the ability to analyse an issue from multiple perspectives.

Textbooks:

1. Jules Verne, *Selected Short Stories*, Maple Press, 2019
2. E. M. Forster, *The Eternal Moment & Other Stories*, Mariner Books, 1970
3. Philip K. Dick, *The Short Story Collection*, Createspace Independent Publishers, 2014
4. William Gibson, *Burning Chrome*, Gollancz Publishers, 2017
5. Tarun Saint & Manjula Padmanabhan eds. *The Gollancz Book of South Asian Science Fiction* vol. 1, Hachette India, 2019
6. Lucas K. Law & Derwin Mak eds. *Where the Stars Rise: Asian Science Fiction & Fantasy*, Laksa Media Groups Inc., 2017

Reference Books

1. Adam Roberts, *The History of Science Fiction*, Palgrave MacMillan, 2nd edition, 2016
2. Brian Aldiss & David Wingrove, *Trillion Year Spree*, Gollancz, 1986
3. Carl Freedman, *Critical Theory and Science Fiction*, Wesleyan University Press, 1st edition, 2000
4. Darko Suvin, *Metamorphoses of Science Fiction*, Peter Lang AG, updated edition, 2016

Course Title	Econometrics For Business Data Analytics
Course Code	HS40151 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Econometrics is a set of research tools used to estimate and test economic relationships. The methods taught in this course can also be employed in the business disciplines of accounting, finance, marketing and management and in many social science disciplines. SPSS provides data analysis for descriptive and bivariate statistics, numeral outcome predictions and predictions for identifying groups. The software also provides data transformation, graphing and direct managing features.

Course Contents:

Nature and scope of Econometrics. Specification Analysis. Omission of a relevant variable. Inclusion of irrelevant variable, Tests of specification. Estimation of parameters, Testing of hypotheses , Defining statistical hypotheses, Distributions of test statistics, Testing hypotheses related to population parameters, Type-I and Type-II errors; Power of a test.

Properties of estimators, Best Linear Unbiased Estimator, Goodness of fit- R^2 and Adjusted R^2 . Scaling and units of measurement, Confidence intervals, Gauss

Markov Theorem. Normal distribution; chi-sq, t-and F-distributions, , Tests for comparing parameters from two samples. Data analysis using SPSS.

Correlation- Partial and multiple. Estimation of model by method of ordinary least squares. Causality test, Granger test and Sim's test. Forecasting. Violations of Classical Assumptions: Consequences, Detection and Remedies – Multicollinearity; Heteroscedasticity; Serial correlation. Data analysis using SPSS.

Individual and Joint Functional Forms of Regression Models. Qualitative (dummy) independent variables. Factor Analysis. Cluster analysis. Structural Equation Modeling. Data analysis using SPSS and AMOS.

Course Outcome:

Upon completion of this course, the students will be able to

CO1: Understand the usage of econometric tools in business,

CO2: Describe BLUE and various types of distribution,

CO3: Forecast future values using correlation and regression using SPSS,

CO4: Check the relation between variables using causality, factor analysis and SEM using SPSS,

CO5: Estimate and predict using dummy variables using SPSS, and

CO6: Gain working knowledge on SPSS.

Textbooks:

1. Joseph F. Hair Jr., William C. Black, Barr y J. Babin, Rolph E. Anderson
Multivariate Data Analysis, 8th Edition. . Cengage Publication.

Reference Books:

2. Wooldridge, Introduction to Econometrics, Cengage Publication.
3. Kmenta J., Elements of Econometrics, University of Michigan Press.
4. Johnston J., Econometric Methods (2nd edition), Mc Graw Hill, New Delhi
5. Gupta S.C, Fundamental of Statistics. Himalaya Publishing House.
6. Gupta S.C and Kapoor V.K., Fundamentals of Mathematical Statistics, Sultan Chand & Sons, New Delhi.
7. G.S. Maddala- An Introduction to Econometrics
8. Landau, S., & Everitt, B. S. (2003). A handbook of statistical analyses using SPSS. Chapman and Hall/CRC

Course Title	Financial Economics
Course Code	HS40153 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Financial economics analyzes the use and distribution of resources in markets. It employs economic theory to evaluate how time, risk, opportunity costs, and information can create incentives or disincentives for a particular decision.

Course Contents:

Investment theory and portfolio analysis: deterministic cash flow streams; basic theory of interest; discounting and present value; internal rate of return; evaluation criteria; fixed-income securities; bond prices and yields; interest rate sensitivity and duration; immunisation; the term structure of interest rates; yield curves; spot rates and forward rates.

Single period random cash flows; mean-variance portfolio theory; random asset returns; portfolios of assets; portfolio mean and variance; feasible combinations of mean and variance; mean-variance portfolio analysis: the Markowitz model and the two-fund theorem; risk-free assets and the one-fund theorem. Efficient Market Hypothesis.

CAPM: the capital market line; the capital asset pricing model; the beta of an asset and of a portfolio; security market line; use of the CAPM model in investment analysis and as a pricing formula; the CAPM as a factor model, arbitrage pricing theory.

Futures, options and other derivatives: introduction to derivatives and options; forward and futures contracts; options; other derivatives.

Course Outcomes:

Upon completion of this course, the students will be able to

- CO1: Understand theories of investment,
- CO2: Discuss portfolio analysis,
- CO3: Explain Efficient Market Hypothesis,
- CO4: Describe Capital Asset Pricing Model,
- CO5: Discuss various types of contracts.

Textbooks:

1. **Zvi Bodie; Alex Kane; Alan J. Marcus; Pitabas Mohanty.** Investments, 11th Edition. Mc Graw Hill.

Reference Books:

1. Brealey, R., Myers, S., Allen, F., Mohanty, P. (2013). *Principles of corporate finance, 10th ed.* Tata McGraw-Hill.
2. Hull, J., Basu, B. (2017). *Options, futures, and other derivatives, 9th ed.* Pearson Education.
2. Luenberger, D. (2013). *Investment science.* Oxford University Press

Course Title	Corporate Finance
Course Code	HS 40155 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Corporate financing manages financial activities by obtaining funds from the right sources. Corporate financing manages financial activities to maximize the return on investment. Corporate financing balances risk and profitability by properly structuring and budgeting the capital

Course Contents:

The Economic properties of utility functions – concept & measures to model attitudes towards risk – Expected utility maximization – Risk aversion – Motivation – First order stochastic dominance – Second order stochastic dominance – Stochastic dominance Vs dominance- risk: Risk versus return: Mean-variance analysis. Game Theory. The Prisoner's Dilemma. Nash Equilibrium.

Trade-off between risk and return (the Markowitz model) – Efficient frontier of risky assets – Value at risk of a portfolio – Computing VaR-Definition of VaR. Sharpe single index model.

The principle of arbitrage; discrete processes and the binomial tree model; risk neutral valuation; stochastic process (continuous variable, continuous time), the Markov property, Itô's lemma; the idea underlying the Black- Scholes-Merton (BSM) differential equation, BSM pricing formulas; the Greek letters.

The use of futures for hedging, stock index futures; forward and futures prices; interest rate futures and duration-based hedging strategies, option markets; call and put options; factors affecting option prices; put-call parity; option trading strategies: spreads; straddles; strips and straps; strangles.

Course Outcomes:

Upon completion of this course, the students will be able to

- CO1: Learn about expected utility maximization – Risk aversion,
- CO2: Understand trade-off between risks and return,
- CO3: Know the principle of arbitrage; discrete processes and the binomial tree mode,
- CO4 Analyse the risk neutral valuation; stochastic process and the Markov property,
- CO5 Learn the idea underlying the Black- Scholes-Merton (BSM) differential equation, BSM pricing formulas; the Greek letters, and
- CO6 Understand the use of futures for hedging.

Course Title	Employment, Employability And Growth
Course Code	HS40157 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of the paper is to Introduce the development economics, and then proceeds to studydevelopmental policies to promote economic opportunity, and the future of work in the rapidly changing world, and to explain the link between environment and economic development, and globalization and economic development.

Course Contents:

UNIT I

Introduction to economic growth and development:

Conceptualizing Development: Meaning of Economic development, Growth and Development; Growth accounting, Solow residual, A Contrast in Concepts, Measuring Economic Growth, Measuring Economic Development, The Development Gap; Human Development: What and Why Human Development, Essential Components of Human Development , Human Development Index

UNIT II

Labour force growth and occupational pattern;Labour relation and social Security:

Labour Force Growth in India, Occupational Structure and Economic Development Occupational Distribution of Labour Force in India; Magnitude of Industrial Disputes ,Causes of Industrial Disputes ,Industrial Relations: Policy of the Government ,Social Security in India.

UNIT III

Globalisation, Foreign aid and trade: Enable growth and development.

Globalisation and its impact: Meaning, steps, effects. Foreign Capital/Foreign Direct Investment(FDI), government policy, foreign aid, Foreign trade, Foreign trade of India, Foreign direct investment and trade: interlinkages and policy implications, Special Economic Zone(SEZ), International migration(FLO), Global value chain(GVC); concept as a model of growth.

UNIT IV

Technology and future of work:

Global value chain(GVC); Tradition and Technology, Transfer of technology, ICT and employment opportunities- agriculture, industry, service sector; social and economic development; ICT infrastructure and E-resilience, Skill development programmes of India.

UNIT V

Data analysis (Using software)

Recent budgetary policies and programs, Analysis of Economic Survey data pertaining to above concepts.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Learn about basics of development economics, with in depth discussions of the concepts of development and growth,
- CO2: Understand importance of human development and human capital for the economic Development,
- CO3 : Understand the impact of globalization on economic growth,
- CO4 : Learn about long run dynamic technology and future of work,
- CO5: Gain knowledge on policies and programmes to develop more sustainable economy.
- CO6 : Analyze the data related to growth and development.

Course Title	Public Economics
Course Code	HS40156 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This course is overview of government finances with special reference to India. It aims to introduce students to the main concepts in public finance, they understand taxation policy, management of public expenditure, public debt and budgetary techniques and practices. It will be useful for students aiming towards careers in the government sector, policy analysis, business.

Course Contents:

Public Finance and private finance; public good vs. private good; Market failure and role of government; Criteria for public investment-Social Cost-Benefit Analysis; Maximum Social Advantage. Tax System: structure and reforms. Tax saving schemes.

Wagner’s law of increasing state activities; Wiseman-Peacock hypothesis; Pure theory of public expenditure; Structure and growth of public expenditure; Criteria for public investment; Social cost-benefit analysis – Project evaluation.

Objectives of fiscal policy – full employment, anti-inflation, economic growth, redistribution of income and wealth; Interdependence of fiscal and monetary policies; Budgetary deficit and its implications; Fiscal policy for stabilization – Automatic vs discretionary stabilization; Alternative measures of resource mobilization and their impact on growth, distribution and prices; Balanced budget multiplier.

Challenges of financing small economic operators like moral hazard, adverse selection, high transaction cost and information asymmetry etc. Concept of microfinance: different models of microfinance operating in India; Self Help Group-Bank Linkage Programme (SBLP) in India. Subsidy-linked credit programmes and Non subsidy-link programmes of the Government of India for rural sector.

Course Outcomes:

Upon completion of this course, the students will be able to

- CO1 :Understand public finance and different roles played by the government in an economy,
- CO2 :Learn about the interaction between the public and the private sector regarding several economic functions in an economy ,
- CO3 :Analyze the rationale behind different public sector activities by the government as suggested from the study of public finance,
- CO4 :Differentiate between public goods and private goods,
- CO5 :Understand the market failure and the role of the government,and
- CO6 :Understand financial market in the light of the need to achieve efficiency and distribution goals.

Course Title	Advanced Econometrics
Course Code	HS40158 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The primary objective of this course is to provide an advanced treatment of econometric methods for cross section and panel data including linear and non-linear models. EViews can be used for general statistical analysis and econometric analyses, such as cross-section and panel data analysis and time series estimation and forecasting.

Course Contents:

UNIT I

Regressions with Qualitative Independent Variables :

Dummy variable technique – Testing structural stability of regression models comparing to regressions, interaction effects, seasonal analysis, piece wise linear regression; The LPM, Logit, Probit and Tobit models – applications. Data analysis using Eviews.

UNIT II

Dynamic Econometric Model: Auto-regressive and distributed lag models – Koyak model, partial adjustment model, adaptive expectations; Instrumental variables, Problem of auto-correlation – application; Almon approach to distributed lag models. Data analysis using Eviews.

UNIT III

Ordinary Least Square Methods: OLS, FMOLS, DOLS. Estimating generalized least squares (GLS) equations using the Cochrane-Orcutt method. Data analysis using Eviews.

UNIT V

Volatility model(s): ARCH, GARCH, GARCH-M, TGARCH, EGARCH. Cointegration, VAR and VECM. Data analysis using Eviews.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 :Learn the regressions with Qualitative Independent Variables,

CO2 :Understand the theory and application of dynamic econometrics models,

CO3 :Know to estimate and interpret the Granger causality test results,

CO4 :Understand about Eviews software and import of data to Eviews,

CO5 :Learn the data analysis using Eviews,and

CO6 :Know the theory and application of cointegration, VAR and VECM with time series data.

Textbooks:

1. Bhaumik, Sankar – Principles of Econometrics: A Modern Approach using EViews, OUP, 2015

Reference Books:

1. Koutsoyiannis, A. (1977) Theory of Econometrics, Macmillan Press, London.
2. Amemiya,T. (1985), Advanced Econometrics, Harvard University Press, London
3. Mas-Colell,A., M.D. Whinston and J.R. Green Microeconomic Theory, Oxford University Press, 1995.

Course Title	Economic Inequality
Course Code	HS40162 (L-T-P-Cr: 3-0-0-3)

Course Objective:

This course studies inequality from the economic perspective.

Course Contents:

UNIT I

Introduction to inequality:

Meaning of inequality; Global versus within-country inequality, growth and inequality; indicators of regional imbalance; cause of regional inequality; policy measures to remove regional inequality.

UNIT II

Measuring Inequality:

Income Inequality, causes of income inequality; Axioms of inequality, Lorenz curve and Kuznets' inverted U hypothesis, Gini Coefficient, Decile dispersion ratio, Palma ratio, Gary S. Fields's Prediction.

UNIT III

Inequality and Food Security:

Food and nutritional value; Global Hunger Index; Concept of food security, Global food security index; food self sufficiency; Public Distribution System (PDS); Steps to reform PDS.

UNIT IV

Inequality and Human Resource Development.:

Essential components of Human development, Human development Index(HDI), HDI ranking vs Income ranking, Inequality adjusted human development index, Gender inequality, Gender inequality index.; Population stabilization; Health care infrastructure; Development of education sector in India, Equity and inclusion in education, policy measures to remove inequality.

UNIT V

Current Status of Inequality:

Recent budgetary policies and programs relating to inequality; Analysis of Economic Survey data.

Course Outcome:

Upon completion of this course, the students will be able to

CO1: Learn about various aspects of inequality,

CO2: Analyse and Measuring Inequality,

CO3: Understand food security and inequality,

CO4: Understand about health and educational disparity,

CO5: Learn about effectiveness of current government programs, and

CO6: Analyze the data on economic inequality.

Course Title	Scientific And Technical Writing
Course Code	EX20003 (L-T-P-Cr: 3-0-0-3)

Course Objective:

Technical documents take many forms depending on their purpose and the audience. A technical document can be a project proposal, minutes of a meeting, an advertisement in a newspaper, or even a research paper. A scientific document is a form of technical document where both the author and the audience are experts. The writing styles and the document density of technical documents depend on the nature of the document. The objective of this subject is to train the students in the art and science of writing a range of scientific and technical documents.

Course Contents:

UNIT I

Introduction:

Forms and features of creative, technical, scientific, and science writing; Audience types (general and specific experts, technicians, managers, laypersons, and mixed audience); Examples of documents for technical, professional, and scientific communications; Characteristics of effective technical writing: Accuracy, clarity, conciseness, coherence, appropriateness, and readability.

UNIT II

Language Issues:

Revisiting English grammar; Punctuation (period, comma, colon, semicolon, question mark, exclamatory mark, apostrophe, quotation marks, hyphen, dash,

parentheses, and brackets); Mechanics (capitalization, italics, abbreviations, acronyms); Latin terms used popularly in English texts; Informal and colloquial English; Dangling modifiers, Faulty parallelism, Judicious use of common words and phrases; Active and passive voice; Nominalization; Common English errors; Pitfalls in writing; Adapting texts to issues of gender, race, and ethnicity; and Guarding against Plagiarism.

Paragraphing: Unity of idea, topic sentence, logical and verbal bridges through use of signposts, transitions, and link words; Patterns of development of an idea; and Lists.

UNIT III

Structure of Scientific Documents:

Prefatory Materials: Title, Copyright Notice, Declaration and Certificates, Abstract, Keywords, Acknowledgements and Conflict of Interest Statement, Symbols and Abbreviations, and Table of Contents.

Body of Scientific Documents: Introductory Materials—Context, problem and current response, research questions, hypotheses, and objectives and scope; Literature Review—Presentation styles, citations and referencing systems, quoting, paraphrasing, and summarizing; Materials and Methods—Mathematical Materials: Methodology, methods, tools, and techniques; Quantitative, qualitative, experimental, and mixed methods; Numbers and numerals, engineering and scientific notations of numbers, mathematical operators, equations, flowcharts, algorithms, SI units, significant digits and order of magnitude, figures, tables, and photographs; Experimental apparatus, materials, specifications, measuring instruments, procedure, data analysis; Concluding Materials—Conclusions, implications, generalization, limitations, scope for further work, and contributions of the work.

End Matters: References, Appendixes, and Supplementary materials.

UNIT IV

Structure of Selected Technical Documents:

PowerPoint presentation, Abstract of a paper, Laboratory reports, Progress report, Project proposal, Minutes of a meeting, Brochure, and News items.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 :Realize the need to articulate the purpose of the document, identify its audience, and decide the density of information to be included in scientific and technical documents;

CO2 :Internalize the art and science of scientific and technical writing;

- CO4 :Make appropriate use of crisp language, illustrations, and symbols.
 CO4 :Distinguish between bad and good writing. (Analyze and Evaluate)
 CO5: Prepare a variety of scientific and technical documents, including laboratory and project reports; and
 CO6:Write these documents in an accurate, clear, concise, coherent, appropriate, and readable manner.

Reading materials:

1. Lecture notes on Scientific and Technical Writing
2. Alred, G. J., C. T. Brusaw, and W. E. Oliu (2008), *Handbook of Technical Writing*, St. Martin's Press, New York, Ninth Edition.

Course Title	Industry 4.0 Technologies
Course Code	EX20001 (L-T-P-Cr: 2-0-0-2)

Course objectives:

The current manufacturing industries and businesses are moving from the third industrial revolution of the computers and automation to the fourth where the automation becomes even smarter fueled by data analytic and artificial intelligence. This course is designed to offer learners an introduction to use of Internet and Digital technology for better manufacturing and business. Learners will gain deep insights into how smartness is being harnessed from

data and appreciate what needs to be done in order to overcome some of the challenges.

Course Contents:

UNIT I

Introduction:

The Fourth Industrial Revolution, Difference between conventional automation and Industry 4.0, Case Studies: Health, Agriculture, Manufacturing

UNIT II

Industry 4.0 and its components:

Internet of Things (IoT) & Industrial Internet of Things (IIoT), Internet of Services, Value chains in manufacturing companies, Digital Twins

UNIT III

Digital Manufacturing and Design:

Cyber Physical Systems and Next Generation sensors, Collaborative Platform and Product Life-cycle Management, Robotics and Automation

UNIT IV

Industrial IoT:

Cloud Computing, Big Data Analytic, AI & ML, Virtual and Augmented Reality, Block-chain

UNIT V

Challenges & Opportunities in Industry 4.0: A Digital Strategy alongside Resource Scarcity, Standards and Data security, Financing conditions, availability of skilled workers, Comprehensive broadband infra- structure, Legal framework, protection of corporate data, liability, handling personal data.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Understand the key components and enablers of Industry 4.0 Technology
- CO2: Appreciate the smartness in Smart Factories, smart products and smart Services.
- CO3: Outline Smart Factory technologies and their role in an Industry 4.0 world
- CO4: Outline IoT technology and scope of implementing IoT in Industries and businesses.
- CO5: Comprehend distributed cyber-physical and digital manufacturing system

CO6: Demonstrate the opportunities, challenges brought about by Industry 4.0 and how organizations and individuals should prepare to reap the benefits

Textbooks:

1. D. Pyo, J. Hwang, and Y. Yoon, *Tech Trends of the 4th Industrial Revolution*, Mercury Learning & Information publisher, 2021.
2. Bruno S. Sergi, Elena G. Popkova, Aleksei V. Bogoviz, and Tatiana N. Litvinova *Understanding Industry 4.0 : AI, the Internet of Things, and the Future of Work*, Pub: Emerald Publishing Limited, 2019

Reference Books:

1. S. Misra, A. Mukherjee, and A. Roy *Introduction to IoT*. Cambridge University Press, 1st edn. 2021
2. Dac-Nhuong Le, Chung Van Le, Jolanda G. Tromp , Gia Nhu Nguyen, *Emerging Technologies for Health and Medicine: Virtual Reality, Augmented Reality, Artificial Intelligence, Internet of Things, Robotics, Industry 4.0*, John Wiley publisher, 2018
3. Alasdair Gilchrist, *Industry 4.0: The Industrial Internet of Things*, Apress Berkeley publisher, CA 1st ed 2016.

Course Title	Engineering Economic
Course Code	HS30101(L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of Engineering Economics is to aid in decision-making by focusing on the economic implications of technical analysis. It is committed to making operational level decisions and solving problems.

Course Contents:

UNIT I

Introduction to Economics and Engineering Economics:

Basic concepts of Engineering Economics: Demand Analysis, Supply Analysis, Market Equilibrium. Revenue Analysis. Demand Forecasting- Quantitative Methods, Consumer's Equilibrium.

UNIT II

Production and Cost Analysis:

Short Run and Long Run Production Functions, Producer's Equilibrium condition. Cobb-Douglas Production Function.

Cost Concepts: Short Run and Long Run Cost analyses. Break-Even Analysis.

Market: Concepts and Types; Perfect Competition, Monopoly

UNIT III

Time Value of Money:

Interest Formulae and their applications with cash flow diagram. Evaluation of Investment Proposals - Present Worth, Future worth and Annual Equivalent Method of comparison

UNIT IV

Economic Appraisal Techniques:

Net Present Value (NPV), Internal Rate of Return (IRR), Cost Benefit analysis. Depreciation calculation; Meaning and Definition, Methods.

UNIT V

Macroeconomic policies:

Functions of commercial banks and central bank, Fundamentals of Business cycle, Macroeconomic policies for stabilization.

Course Outcome:

Upon completion of this course, the students will be able to:

CO1 : Comprehend the significance of different components of Engineering Economics,

- CO2 : Analyze the basic economic concepts required for engineers and managers,
- CO3 : Develop the problem solving aptitude in the students through practical and case problems,
- CO4 : Decide the feasibility of a particular project by the application of different project evaluation Techniques,
- CO5 : Use the economic tools in the decision making process, and
- CO6 : Survey the current macroeconomic situations in the economy.

Course Title	Universal Human Values
Course Code	HS30401 (L-T-P-Cr : 3-0-0-3)

Course Objective:

The objective of the course is to develop a holistic perspective based on self-exploration, understand the harmony in the human being, strengthen self-reflection, and develop commitment and courage to act.

Course Contents:

UNIT I

Need, Basic Guidelines, Content and Process for Value Education:

Purpose and motivation for the course, recapitulation from Universal Human Values-I. Self-Exploration-what is it? - Its content and process; 'Natural Acceptance' and Experiential Validation- as the process for self-exploration. Continuous Happiness and Prosperity- A look at basic Human Aspirations. Right understanding, Relationship and Physical Facility- the basic requirements for fulfillment of aspirations of every human being with their correct priority. Understanding Happiness and Prosperity correctly- A critical appraisal of the current scenario. Method to fulfil the above human aspirations: understanding and living in harmony at various levels. Include practice sessions to discuss natural acceptance in human being as the innate acceptance for living with responsibility (living in relationship, harmony and co-existence) rather than as arbitrariness in choice based on liking-disliking

UNIT II

Understanding Harmony in the Human Being - Harmony in Myself! :

Understanding human being as a co-existence of the sentient 'I' and the material 'Body'. Understanding the needs of Self ('I') and 'Body' - happiness and physical facility. Understanding the Body as an instrument of 'I' (I being the doer, seer and enjoyer). Understanding the characteristics and activities of 'I' and harmony in 'I'. Understanding the harmony of I with the Body: Sanyam and Health; correct appraisal of Physical needs, meaning of Prosperity in detail. Programs to ensure Sanyam and Health. Include practice sessions to discuss the role others have played in making material goods available to me. Identifying from one's own life. Differentiate between prosperity and accumulation. Discuss program for ensuring health vs dealing with disease

UNIT III

Understanding Harmony in the Family and Society- Harmony in HumanHuman Relationship:

Understanding values in human-human relationship; meaning of Justice (nine universal values in relationships) and program for its fulfillment to ensure mutual happiness; Trust and Respect as the foundational values of relationship . Understanding the meaning of Trust; Difference between intention and competence . Understanding the meaning of Respect, Difference between respect and differentiation; the other salient values in relationship. Understanding the harmony in the society (society being an extension of family): Resolution, Prosperity, fearlessness (trust) and co-existence as comprehensive Human Goals. Visualizing a universal harmonious order in society- Undivided Society, Universal Order- from family to world family. Include practice sessions to reflect on relationships in family, hostel and institute as extended family, real life examples, teacher-student relationship, goal of education etc. Gratitude as a universal value in relationships. Discuss with scenarios. Elicit examples from students' lives

UNIT IV

Understanding Harmony in the Nature and Existence - Whole existence as Coexistence:

Understanding the harmony in the Nature. Interconnectedness and mutual fulfillment among the four orders of nature: recyclability and self-regulation in nature. Understanding Existence as Co-existence of mutually interacting units in all-pervasive space. Holistic perception of harmony at all levels of existence. Include practice sessions to discuss human being as cause of imbalance in nature (film "Home" can be used), pollution, depletion of resources and role of technology etc.

UNIT V

Implications of the above Holistic Understanding of Harmony on Professional Ethics:

Natural acceptance of human values. Definitiveness of Ethical Human Conduct. Basis for Humanistic Education, Humanistic Constitution and Humanistic Universal Order. Competence in professional ethics: a) Ability to utilize the professional competence for augmenting universal human order b) Ability to identify the scope and characteristics of people friendly and eco-friendly production systems, c) Ability to identify and develop appropriate technologies and management patterns for above production systems. Case studies of typical holistic technologies, management models and production systems. Strategy for transition from the present state to Universal Human Order: a) At the level of individual: as socially and ecologically responsible engineers, technologists and managers b) At the level of society: as mutually enriching institutions and organizations. Sum up. Include practice Exercises and Case Studies will be taken up in Practice (tutorial) Sessions eg. To discuss the conduct as an engineer or scientist etc.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Understand the concept of value education and its need,
- CO2: Apply their knowledge on value education for apt self-assessment,
- CO3: Comprehend human-human relationship,
- CO4: Build holistic perception of harmony at all levels of existence,
- CO5: Develop the sense of natural acceptance of human values, and
- CO6: Create people friendly and eco-friendly environment.

Textbooks:

1. Human Values and Professional Ethics by R R Gaur, R Sangal, G P Bagaria, Excel Books, New Delhi, 2010

Reference Books:

1. Jeevan Vidya: Ek Parichaya, A Nagaraj, Jeevan Vidya Prakashan, Amarkantak, 1999.

3. The Story of Stuff (Book).
4. Mohandas Karamchand Gandhi ,The Story of My Experiments with Truth
5. Small is Beautiful - E. F Schumacher.
6. Slow is Beautiful - Cecile Andrews
7. Economy of Permanence - J C Kumarappa
8. Bharat Mein Angreji Raj - PanditSunderlal
9. Rediscovering India - by Dharampal
10. Hind Swaraj or Indian Home Rule - by Mohandas K. Gandhi
11. India Wins Freedom - Maulana Abdul Kalam Azad
12. Vivekananda - Romain Rolland (English)
13. Gandhi - Romain Rolland (English)

Course Title	Engineering Professional Practice
Course Code	EX40003 (L-T-P-Cr: 2-0-0-2)

Course Objective:

Engineers are expected to perform their tasks responsibly and ethically, following professional standards and guidelines. This subject allows the students to understand the roles and responsibilities of engineers in society, learn professional standards, codes of ethics, issues concerning employment contracts and other legal matters, and skills of working in teams, and to effectively communicate. The subject will be offered jointly by the faculty members of

various schools of technology and will be coordinated by the School of Mechanical Engineering.

Course Contents:

UNIT I

Engineering and Engineer:

Engineering as a discipline and a profession; Attributes and functions of a practicing engineer; and Engineer as problem solver, designer, and change agent.

UNIT II

Selected Functions of Engineering:

Designing for safety and reliability; Quality and productivity management; Dealing with problem complexity, uncertainty, risk, and ambiguity; Project management; and managerial functions such as planning, organizing, motivating, and accounting.

UNIT III

Professional Aspects of Engineering:

Accreditation, certification, and licensing; Ethical issues: Ethics and morality, ethical dilemmas, codes of ethics, professional conduct, nature and role of professional societies, engineering standards; Legal issues—Legal forms of business organizations, employment contracts, trademarks, patents, copyrights, trade secrets, professional liability, contractual agreements, environment and information technology laws, and international legal framework such as WTO.

UNIT-IV

Group Dynamics:

Individual cognition; Dynamics of working in teams/groups; Interacting with stakeholders; Dealing with multicultural environments; Team and group communication; and Negotiation and conflict resolution.

Course Outcomes:

Upon completion of this course, the students will be able to

- CO1 : Know (a) the features of engineering as a profession, (b) the roles and responsibilities of engineers in society, and (c) the skills for working in teams,
- CO2: Realize the use of professional standards, codes of ethics, legal provisions surrounding engineering functions,
- CO3 : Apply the above-stated standards, codes, legal provisions, and group communication skills in their decision-making situations,
- CO4 : Break down a complex problem into smaller manageable tasks,
- CO5 : Compare among alternatives in situations of uncertainty, risk, and ambiguity.

CO6 : Design engineering solutions to industrial environmental and social problems.

Textbooks:

1. Shrestha, R. K. and Shrestha, S. K. (2020), Textbooks: of Engineering Professional Practice, 3rd Edition, Heritage Publishers and Distributors Pvt. Ltd.

Reference Books

1. Habash, R. (2019), Professional Practice in Engineering and Computing: Preparing for Future Careers, 1st Edition, Boca Raton: CRC Press.
2. Walesh, S. G. (2012), Engineering Your Future: The Professional Practice of Engineering, 3rd Edition, Wiley.
3. Subramaniam, R. (2017), Professional Ethics, 2nd Edition, Oxford University Press
4. Lectures note on Engineering Professional Practice provide by Concerned faculty members.

Course Title	Research Methods And Ethics
Course Code	EX40001 (L-T-P-Cr: 3-0-0-3)

Course Objective:

The objective of this course is to introduce to the undergraduate students the various elements and methods of ethically conducting a piece of scientific research.

Course Contents:

UNIT I

Introduction to research:

Structure of research: Scientific method and Engineering design cycle, Defining and scoping Research problems, Formulating research objectives and research questions.

UNIT II

Literature Review:

Searching for literature; Narrative and systematic literature review; Summarizing, paraphrasing, and quoting; and Referencing styles.

UNIT III

Design of Experiments:

Basic Principles of randomization, replication, and Blocking; Factors and Responses; Analysis of variance, Experiments with blocking factors, and Factorial designs.

UNIT IV

Data Analytics:

Data pre-processing; Data visualization; Tests of hypothesis; Decision trees; and Artificial neural networks.

UNIT V

Theoretical Models:

Typology of models; Optimization models, forecasting models, and control models; Monte Carlo simulation; Genetic Algorithm; Model verification and validation; and Measurement and uncertainty analysis.

UNIT VI

Drawing Inferences:

Drawing inferences, Generalizing, Finding potential applications, Imagining future scope, and Highlighting novelty of research.

UNIT VII

Research Ethics:

Ethics and morality; Utilitarian and deontological theories of ethics; Fabrication, falsification, plagiarism, and questionable research practices; Issues related to privacy and confidentiality; and Ethical issues related to publications

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 : Select research topics and formulate research questions,
- CO2: Conduct a literature search and make a review of literature,
- CO3: Get acquainted with a range of qualitative, quantitative, experimental, and theoretical methods of Research,
- CO4: Become familiar with the techniques of data collection, analysis, and interpretation,
- CO5: Understand the importance of research ethics and the implications of the broader impact of research, and
- CO6 : Conduct research with honesty and integrity.

Reading Materials :

1. Dunn, P. K. (2021), Scientific Research and Methodology: Tutorials, An Introduction to Quantitative Research and Statistics in Science, Engineering, and Health: Tutorials, Available free at <https://bookdown.org/pkaldunn/SRM-tutorials/>.
2. Dunn, P. K. (2021), Scientific Research and Methodology: Software, An Introduction to Quantitative Research and Statistics in Science,

Engineering, and Health: Using Software, Available free at <https://bookdown.org/pkaldunn/SRM-software/>. (Uses Jamovi and SPSS Software, Jamovi is a freely downloadable software)

Lectures note on Research Methods and Ethics provide by Concerned faculty members.

Course Title	Building Drawing, Estimation & Costing
Course Code	CE28001 (L-T-P-Cr: 0-0-2-1)

Course Objective:

This subject is designed to enrich the basic knowledge of engineering students to develop building drawings. The subject will also give students exposure about quantity estimation and costing of the building.

Course Contents:

UNIT I

Building Drawing:

Construction Standards and drawing techniques in projects. Introduction to basic principles of Computer-Aided Design (CAD), Orthographic projection including sectional views of buildings and parts of buildings and building details, e.g. foundations, walls (including openings), jambs, sills, lintels and arches, floors and roofs, doors and windows, simple stairs. Preparation of simple working drawings and details from free-hand sketches.

UNIT I

Estimation:

Estimation, units, item work, different kinds of estimates, different methods of estimation, estimation of materials in building, with different sections of walls, foundation. Bar Bending Schedule, Estimation of finishing works.

UNIT II

Specification of Works:

Necessity of specification types of specification, general specification, specification of bricks, cement, sand, reinforcement, detailed specification for earthwork, cement, concrete, brickwork, flooring, D.P.C, R.C.C, cement plastering, white and colour washing, distempering, painting.

UNIT III

Rate analysis:

Procedure of rate analysis for items - Earth work, concrete works, R.C.C works, reinforced brick work, plastering.

Course Outcomes:

Upon completion of this course, the students will be able to

CO1: prepare the layout plan, elevation of building

CO2: understand the building drawings and details

CO3: learn the basic concept of estimation and its application in real construction projects.

CO4: analyze the rates of individual items for the preparation of the estimates.

CO5: prepare schedule of quantities required to be attached with the tender documents.

CO6: develop critical thinking ability to optimize the building construction cost.

Textbooks:

1. B. N. Dutta, Estimating and Costing in Civil Engineering – Theory & Practice, CBS Publishers & Distributors Pvt Ltd, 28th Edition, 2020.
2. M. Chakraborty, Estimating & Costing, Specification and Valuation in Civil Engineering, Chakraborty, 29th Edition, 2006, ISBN-10: 818530436X.

Reference Books:

1. B. S. Patil, Civil Engineering Contracts and Estimates, Universities Press, 3rd Edition 2006, ISBN-10: 8173715599.

Course Title	Gis & Gps Applications
Course Code	CE28003 (L-T-P-Cr: 0-0-2-1)

Course Objective:

The objective of the course is to understand the GIS principles, applications, preparation of study maps, creation of interpolation maps, delineation of watershed, explain the functions of GPS and operation of GPS.

Course Contents:

- Overview of Geographic Information System (GIS)
- Familiarization to ArcGIS Interface
- Layout of study area
- Preparation of interpolation map
- Watershed delineation
- Remote sensing satellites
- Basics of Global position system
- Basic operations of GPS Handset
- GPS field surveying and data processing

Course Outcomes:

Upon completion of this course, the students will be able to

CO1: explain the fundamentals of GIS

CO2: understand the operations of ArcGIS tools and prepare the layout of study area

CO3: create interpolation maps

CO4: delineate watershed using ArcGIS

CO5: describe the principles and functions of GPS

CO6: operate GPS in the field for navigation

Reference Books:

1. Principles of geographical information systems by P.A. Burrough and R. A. McDonnell, Oxford University Press, UK.
2. Geographic information systems and science by M.F. Goodchild, P.A. Longley, D.J. Maguire and D.W. Rhind, John Wiley & Sons Ltd., England.
3. Global Positioning system: Principles and Applications by SatheeshGopi, McGraw Hill Education.

Course Title	Industrial Wiring and Control Panel Design
Course Code	EE28011 / L- T- P-Cr: 0-0-2-1

Course Objective:

This vocational course will provide an overview of electrical occupations, including the training and the employment options available in electrical industry. It is also designed to provide related training in the electrical trade that will give students the proper coursework in installation and designing of control panel.

Course Contents:

Industrial wiring and Control Panel designing. (THEORY) QElectrotech software.

Hands on Practice:

1. Design multiwire circuit for a direct motor starter (DoL) with one operating (forward) direction using QElectrotech software.
2. Design multiwire circuit for a direct motor starter (DoL) with two operating (forward &reverse) direction using QElectrotech software.
3. Design multiwire circuit for a Star – Delta motor stator with one operating (forward) direction using QElectrotech software.
4. Design multiwire circuit for a Star – Delta motor stator with two operating (forward &reverse) direction using QElectrotech software.

5. Design & connect for a direct motor starter (DoL) with one operating (forward) direction in modular set up .
6. Design & connect for a direct motor starter (DoL) with two operating (forward & reverse) direction in modular set up .
7. Design & connect for a Star – Delta motor stator with one operating (forward) direction in modular set up.
8. Design & connect for a Star – Delta motor stator with two operating (forward & reverse) direction in modular set up.
9. Install & wire for a direct motor starter (DoL) with one operating (forward) direction in Industrial Control Panel.
10. Install & wire for a direct motor starter (DoL) with two operating (forward & reverse) direction in Industrial Control Panel.
11. Install & wire for a Star – Delta motor stator with one operating (forward) direction in Industrial Control Panel.
12. Install & wire for a Star – Delta motor stator with two operating (forward & reverse) direction in Industrial Control Panel.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1 : Realise the purpose and general principles of control components and circuits

CO2: Install Industrial wiring circuits according to given specification and plan.

CO3: Analyze circuit operations on basic motors.(3ø induction Motor)

CO4: Interpret and install circuits according to rules and regulations of the National Electrical Codebook.

CO5: Connect motor controllers for specific applications with emphasis on safety practices and in accordance with National Electrical Code (NEC) requirements.

CO6: Select and size contactors, relays and timing relays and overload relays both physically and schematically and describe their operating principles.

2. Industrial Electrical Systems by B. P. PATIL and M. A. CHAUDHARI

Course Title	Installation, operation and maintenance of solar power system
Course Code	EE28013 / L- T- P-Cr: 0-0-2-1

Course Objective:

To impart job-oriented training to students and make them well convergent on Installation, operation & maintenance of solar PV system. This vocational course is based on study of solar photovoltaic (PV) cells, modules, and system components; electrical circuits; PV system design and sizing for use on homes, commercial building etc., understanding energy conversion from sunlight to electricity, and working with solar conversion equipment. This Course will give students the book knowledge and hands on experience needed to become entrepreneur / self-employed.

Course Contents:

Designing of solar panel and installation (THEORY)

1. Homer
2. PVSYST
3. Helioscope

Hands on Practice:

1. To demonstrate the I-V and P-V Characteristics of PV module with varying radiation and temperature level.
2. To demonstrate the I-V and P-V characteristics of series and parallel combination of PV modules.
3. To show the effect of variation in tilt angle on PV module power.
4. To demonstrate the effect of shading on module output power.
5. To demonstrate the working of diode as bypass diode and blocking diode.
6. To draw the charging and discharging characteristics of battery.
7. Observe the output waveform of the inverter in auto mode.
8. Workout power flow calculations of standalone PV system of AC load with battery.
9. Workout power flow calculations of standalone PV system of DC load with battery.
10. Find the MPP manually by varying the resistive load across the PV panel.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Demonstrate and apply the knowledge of solar electric systems terms and concepts

CO2: Size and design a photo voltaic system.

CO3: Mount, ground, position, install, wire and connect a photo voltaic system.

CO4: Test voltage generated by photo voltaic system.

CO5: To learn different types of solar PV modules and batteries used in solar PV plant

CO6: Design of solar PV plant based on estimated loads.

References:

1. Solar Photo Voltaic Technology and Systems by Chetan Singh Solanki

Course Title	Domestic Wiring and Home Automation
Course Code	EE28015 / L- T- P-Cr: 0-0-2-1

Course Objective:

This vocational course will provide an overview of electrical occupations, including the training and the employment options available in electrical consultancy. It is also designed to provide related training in the electrical wing that will give students the proper coursework in installation and designing of domestic wiring and home automation.

To develop electrical wiring skills in students through systematic training that would enable the students to construct and test various electrical circuits using appropriate electrician tools, wires, protective devices and wiring accessories as per IS standards.

Course Contents:

Domestic wiring and Home Automation. (THEORY)

QElectrotech software.

Hands on Practice:

1. Perform the assembly, wiring and implementation of a single switch (SPST Switch) in circuit.
2. Perform the assembly, wiring and implementation of a Double switch (SPST Switch) in circuit.
3. Perform the assembly, wiring and implementation of a power socket in circuit.
4. Perform the assembly, wiring and implementation of a controlled power socket circuit in housing.
5. Perform the assembly, wiring and implementation of a two ways switches (SPDT Switch) in circuit.
6. Perform the assembly, wiring and implementation of a impulse relay in

- circuit.
7. Perform the assembly, wiring and implementation of a time switch in circuit
 8. Perform the assembly, the wiring and the implementation of a timer lighting in circuit.
 9. Perform the assembly, the wiring and the implementation of a twilight switch in circuit in house or in a shop.
 10. Perform the assembly, wiring and implementation of a controlled lighting in circuit (time switch, timer, twilight switch).
 11. Perform the assembly, the wiring and the implementation of a water heater in circuit.
 12. Perform the assembly, wiring and implementation of a central impulse relay in circuit.
 13. Study and implementation of Light sensitive switch.
 14. Perform the assembly, wiring and implementation of a fan in circuit.
 15. Perform the assembly, wiring and implementation of a distribution panel.
 16. Home automation using KNX technology.
 17. Application of Load shedding contactor and programmable time switch.

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Use appropriate electrician tools, wires, protective devices and wiring accessories

CO2: Rig up wiring diagrams using conduit system of wiring.

CO3: Apply IS standards for electrical wiring

CO4: Prepare different types of wiring joints.

CO5: Well convergent in drawing electrical wiring circuit.

CO6. Enhancement of knowledge regarding specification and application of different electrical devices.

Course Title	Cyber Physics Application in Industrial IoT
Course Code	EE28017 / L- T- P-Cr: 0-0-2-1

Course Objective:

The students will utilize the principles of Cyber-Physical Systems (CPS) and Internet of Things (IoT) to develop applications, implement IoT applications by

selecting appropriate hardware and software platform and also Develop IoT applications using open-source platforms.

Course Contents:

UNIT I

CYBER PHYSICAL SYSTEM. (THEORY)

1. CPS Realworld.
2. Design and Validation of CPS.
3. Smart city application CPS.
4. CPS Hardware Platforms (Process, Sensors and Actuators).

UNIT II

Industry 4.0.

1. IOT Fundamentals and protocols including layers.
2. Sensor and Interfacing.

Hands on Practice:

1. Architecture and pin diagram of Arduino UNO/MEGA and ESP8266
2. IDE installation for open source C++ or Python
3. Analog and Digital voltage sensing and processing through Firmware
4. Analog and Digital voltage based actuator through Firmware
5. Display OLED/Seven segment integration through IDE
6. PCB Design Concept and implementation with uC.
7. Implementation of UI/UX through RestAPI based Thingspeak
8. DATA logging and Generating CSV through RestAPI
9. Writing a Firmware for ESP-8266 or NODEMCU(programming based knowledge)
10. IoT based transformer / condition monitoring system

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Basics of cyber physics components

CO2: Understanding of sensors and actuators

CO3: Layout diagram of open source microcontroller board

CO4: Understanding of analog and digital I/O for cyber-physics

CO5: Understanding of different protocols for IoT connectivity

CO6: Basic architecture for IoT enabled Cyber Physics

Course Title	Industrial Control and Remote Monitoring
Course Code	EE28019 / L- T- P-Cr: 0-0-2-1

Course Objective:

To provide hands on experience in developing Industrial Control and remote monitoring by using PLC (Programmable logic Controller), thus by utilizing it in Process control applications

Course Contents:

UNIT I

Programmable logic Controller SYSTEM. (THEORY)

1. Introduction to Industrial Automation.
2. Introduction to PLC programmable logic controller
3. PLCs & related software and its major Components
4. Relay logic Hardware Platforms (Switches, Sensors and Actuators).
5. Study of Contactors, Timers, Counter and Comparator

UNIT II

Human Machine interface:

1. Introduction to HMI Communication with PLC
2. HMI tags and Assignments
3. Project on Industrial load sequential feedback control Using PLC HMI

Hands on Practice:

1. Introduction of PLC SOFTWARE as TIA Portal
2. Ladder Programming for Basic gates logics by using SPST Contacts
3. Ladder Programming on SPDT
4. Latching Concept and related Latching program
5. Study of program memory and Programming on Memory Bits
6. Study of TIMER BLOCKS and its Programming
7. Introduction to COMPARATOR BLOCK and its Programming
8. Introduction to COUNTER BLOCK and its Types with Programming
9. Project on Industrial Load OFF/ON control Using PLC and HMI
10. Introduction to analog Logic in PLC and its Programming

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Know about typical components of a Programmable Logic Controller

CO2: Know the concept of Electrical ladder logic and its relationship to PLC instructions

CO3: Understand the concept of digital electronics and data acquisition

CO4: Program PLC logical switching circuits for industrial applications

CO5: Choose and utilize Timer, Counter, and other intermediate programming functions

CO6: Design and program automated industrial production line

Course Title	Computational Photography
Course Code	EC28001 (L-T-P-Cr: 0-0-2-1)

Course Objective:

Computational photography (CP) is the fusion of computer graphics, computer vision, optics and imaging. The role of CP is to overcome the limitations of traditional cameras by combining imaging and computing to enable new and improved ways to capture, represent and interact with the physical world. The course provides an overview of elements of photography, which includes digital image capturing mechanisms, lighting controls, effect of focal length and aperture and various lossy and lossless image storage mechanisms. Objective is to briefly explain computational methods used to enhance photographs.

Course Contents**UNIT I****Introduction to Computational Photography:**

History of Photography and Computational Photography, Digital Representation of Images, Cameras, Difference between Full frame, APSC and Medium format sensors, scaling, crop sensor advantages/disadvantages

UNIT II

Digital photography:

Principle of Operation of DSLR camera, Aperture, ISO, Shutter speed and Angle Control, Camera Calibration and Tethering, Computational Cameras, Image Storage formats: Compressed vs uncompressed formats, Basics of Lenses: Wide angle, Telephoto, Prime lenses, Macro lenses. Difference in angle, Depth of field control

UNIT III

Computational Techniques:

Concept of Color, color models, noise, its types, image histogram, Image Processing software: Licensed and Open Source

UNIT IV

Training on Computational Photography:

Shooting with wide angle lenses, Shooting with Telephoto lens, zooming, changes in angle, Shooting with Prime lenses and constant aperture lenses, Shooting with Macro lenses, microscopic photography

UNIT V

Training on Digital Imaging-I:

Photography Genres, Scene Composition, Dynamic Range improvement, Portraits, Photographing scenes, crowd and people, Shooting Portraits, group photos and events

Training on Digital Imaging-II:

Long exposure, Brenizer's Method, Sports High Shutter speed, Burst, fisheye, architecture photography, Macro, Basics of Long exposures, using polarizing filters Shooting panorama, Brenizer's method and other photographing techniques Shooting sports, high shutter speed

Training on Digital Imaging-III:

Use of lights, soft box and flashes, guide number etc. , product photography, computational photography, E-commerce photography, Use of Lights, Flash, wireless flash, Basics of product photography, photography for e-commerce and computational photography

Training on Post Processing-I:

RAW image processing, Basic adjustments and correction, Lens Distortion and color correction using Adobe Photoshop, Monochrome image processing, color image processing batch processing using Light-room

Training on Post Processing-II:

Image enhancement operations, noise removal, Artistic filtering, cosmetic filtering, and other post processing methods. Post Processing III: Background removal, artificial coloring.

Training on Post Processing-III:

Open Source and free software for image post processing and computational photography, their usage and capabilities.

Photography Ethics:

Photography ethics: empathy, consent, integrity, ethical decision making, privacy

Course Outcomes:

Upon completion of this course, the students will be able to:

CO 1: Appreciate concept of photography, and digital camera technology

CO 2: Understand types of cameras and their mechanisms

CO 3: Demonstrate computational image processing

CO 4: Apply computational photography methods for photo composition and panoramic

CO5: Apply computational image processing for photography quality enhancement

CO 6: Explain various image filtering techniques

Textbooks:

1. Computer Vision: Algorithms and Applications, 2nd ed by by Richard Szeliski

Reference Books:

1. Computational Imaging Book, by AyushBansai, AchutaKadambi, and Ramesh Raskar.
2. Multiple View Geometry in Computer Vision, by Richard Hartley and Andrew Zisserman.
3. Computer Vision: A Modern Approach, by David Forsyth and Jean Ponce.
4. Foundations of 3D Computer Graphics, by Steven Gortler.
5. Digital Image Processing, by Rafael Gonzalez and Richard Woods.
6. Photography, by Barbara London and John Upton

Course Title	Sound Engineering
Course Code	CE28003 (L-T-P-Cr: 0-0-2-1)

Course Objective:

It elaborately covers in various aspects of sound (physical and mechanical behavior), equipment used for recording/ reproducing and basic idea for the preparation of final sound track in film or television production.

Course Contents:

- Introduction to technology of sound
- Analysis of prerecorded speech, music and effects
- Observation of the installation of PA System in a large auditorium
- Study and analysis of different microphones
- Study the feature of 2 channel digital sound recorder
- Study about the effect of loudness in relation with the distance from source to the listener
- Sound recording and reproduction practice by using recorder in PA system chain
- Study of sound in different environmental situation
- Study and analysis on Modulated Radio wave AM and FM in Live streaming radio stations
- Study the effect of Bass and Treble (Concept of Equalization)

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: Recognize, define, and explain the principles of sound engineering related to signal flow, microphones, recording, mixing, production, and mastering.

CO2: Demonstrate practical, imaginative understanding and fluency on sound engineering technologies and procedures.

CO3: Solve problems independently, imaginatively, and creatively in the field of sound engineering will be demonstrated by students.

CO4: Learn how to conduct research and have a critical comprehension of sound engineering and its related fields.

CO5: Understand the basic techniques of sound recording.

CO6: Understand the working of different types microphone and loudspeakers and their applications in industry.

Textbooks:

1. Sound Recording and Reproduction – Glyn Alkin

Reference Book:

1. Sound Assistance – Michael Talbot Smit

Course Title	Sensors For Automation
Course Code	EC28005 (L-T-P-Cr: 0-0-2-1)

Course Objective:

Sensors and automation are revolutionizing the technology in the areas like consumer electronics, automotive industry, healthcare, and in other settings. The course will provide an opportunity for students to learn different sensors and its application in real world problems. It will empower the students to develop their knowledge regarding operation, application and integration of sensors to enable the design and realization a complete systems.

Course Contents:

1. Introduction to microcontroller, platform of operations with basic programming techniques
2. Interfacing of serial and parallel device with microcontroller
3. Interfacing of microcontroller with display devices
4. Use of ADC to interface various analog sensors with microcontroller
5. Introduction to sensor, measurement of physical parameters like temperature and humidity
6. Application of ultrasonic and proximity sensor
7. Application of gas and pressure sensor
8. Application of IR sensor and RFID
9. Interfacing actuators to drive DC motor (application of touch switch as actuators)
10. Implement sensor in final products for real time solution

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Learn about the microcontroller, its hardware interfacing and programming
- CO2: Understand the working principle and characteristics of different types of sensor
- CO3: Interface various sensor interfacing with microcontroller and display devices

CO4: Understand the basic principles of analog to digital conversion and its application with different sensors

CO5: Gain knowledge about various types of automation system

CO6: Develop and implement sensor for final products in real time applications

Textbooks:

Reference Books:

1. J. S. Katre, Sensors in Automation, TechKnowledge Publications, 1st Edition, 2023
2. D. Patranabis, Sensors and Transducers, PHI Learning, 2nd Edition, 2003.

Course Title	Pcb Design
Course Code	EC28007 (L-T-P-Cr: 0-0-2-1)

Course Objective:

Over the years, printed circuit board manufacturing has continued to grow in order to keep up with the increasing demands of newer, faster, and more complex electronic circuitry. This course will familiarize students to design, simulate electronics circuit and fabricate PCB for prototyping using CAD tool. This program is designed to provide a balanced foundation of theoretical knowledge and practical skills in printed circuit board design.

Course Contents:

UNIT I

Description of different Electronics Component and their Identification:

Passive and active components, component identification, Color code for resistor and disc capacitors, Inductor and their types, simple air core and iron core inductor design.

UNIT I

Circuit Design and Simulation using CAD tool (OrCAD): Design of a simple electronics circuit using data sheet and circuit schematic and simulation.

UNIT II

Schematic to PCB transfer and routing:

Schematic to PCB transfer (assigning foot prints to various components, transfer to PCB), routing, DRC, ERC, EMC

UNIT III

Screen Printing Procedure:

Preparation of screen, mask transfer

UNIT IV

PCB preparation and Checking of Routing:

transfer of layout to PCB using screen printing methods, etching, cleaning, error checking of routing, component mounting, soldering

UNIT V

Testing and Verification:

Testing the circuit with the help of multi-meter and CRO

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: understand and evaluate different electronics components.
- CO2: create schematic and simulate the circuit using OrCAD or any other CAD tools.
- CO3: understand single- and double-layer PCB.
- CO3: create and fabricate PCB and analyze the PCB using screen printing method.
- CO4: understand assembly of electronics component by soldering.
- CO5: analyze and test the circuit for any error.

Textbooks:

1. Chris Robertson, Printed Circuit Board, PHI, 2003
2. Elaine Rhodes, Developing Printed Circuit Assemblies: From Specifications to Mass Production, 2008, ISBN: 978-1435718760.

2. Kraig Mitzner, Complete PCB Design Using OrCAD Capture and PCB Editor, Newnes, 2009

Open source EDA Tool KiCad Tutorial : <http://kicad-pcb.org/help/tutorials/>

Course Title	Additive Manufacturing (3D Printing)
Course Code	ME28011 (L-T-P-Cr: 0-0-2-1)

Course Objective:

Additive Manufacturing (AM) is a modern manufacturing technology also known as 3D printing process, will provide a clear understanding about the process, acceptability and usability in various field. AM technologies classified on the basis material types will be focused with its real life applications with advantages and disadvantages. Different types of errors associated with AM and CAD technology will be discussed with suitable error minimization processes. Various reverse engineering process will be discussed and practically implemented with its real life applications.

Course Contents:

UNIT I

Introduction to Additive Manufacturing Technologies:

Need & Development of AM systems, AM process chain, Impact of AM and Tooling on Product Development, Benefits, Applications, Digital prototyping, Virtual prototyping.

Model Preparation using Solid Modelling Software.

UNIT II

Classification of Additive Manufacturing Technologies:

Classification of AM technologies on the basis of Materials types. Discussion on various AM processes based solid, liquid and semi solid type of materials along with its application, advantages and disadvantages.

Hands on practice for model creation and saving on particular file format.

UNIT III

Data Processing for AM Technologies:

Process planning for AM, CAD model preparation, data requirements & geometric modelling techniques: Wire frame, surface and solid modelling data formats.

Hands on practice for the fabrication of Single components and Assembly components.

UNIT IV

Rapid Tooling:

Classification: Soft tooling, Production tooling, Bridge tooling; direct and indirect, Fabrication processes, Applications, Rapid tooling techniques such as laminated metallic tooling, direct metallaser sintering, vacuum casting.

Hands on practice for the fabrication of pattern and mould preparation.

UNIT V

Reverse Engineering Processes:

Introduction to reverse engineering, Integration of reverse engineering with AM technology.

Hands on practice to generate model data in reverse engineering process integrated with AM process

Course Outcomes:

Upon completion of this course, the students will be able:

CO1: To understand the concept of additive manufacturing, its benefits and applications in various field.

CO2: To know the various liquid, powder and solid material based technologies in Rapid Prototyping and Rapid Tooling process.

CO3: To know the application of AM process in the field of Biomedical.

CO4: To design solid models and converting it to 3D printing readable file format required for part fabrication.

CO5: To focus on the various types errors in the RP parts and errors during CAD file conversion.

CO6: To apply reverse engineering process to generate data for fabrication RP part.

Reference Books:

1. Rapid Prototyping: Principle and Applications, Rafiq I Noorani, Wiley & Sons, 2006.
2. Rapid prototyping: Principles and applications, Chua C.K., Leong K.F., and Lim C.S., Yes Dee Publishing Pvt. Ltd, Third edition, 2010.
3. Rapid Prototyping and Engineering Applications, Frank W. Liou, CRC Press, Special Indian Edition, 2007.
4. Additive manufacturing, R.B. Choudhary, Khanna Publication, 2022

Course Title	Die development by CNC milling
Course Code	ME28013 (L-T-P-Cr: 0-0-2-1)

Course Objective:

The objective of the course is to provide basic knowledge on various tools and precision instruments used during CNC milling operation. It helps in understanding the usage of various machining cycles to reduce the manufacturing lead time. Moreover, it explains the usage of various standards

and programming methods to be followed during CNC machining operation. Finally, the students can develop/generate the programs used to produce the geometries with complex contours using CNC milling machine.

Course content:

UNIT I

Tools and Safety: List of tools used on Milling Machine to perform various operations.

Safety: Introduction to safety equipment and their uses.

UNIT II

Measuring instruments:

Vernier caliper, Micrometer, Bevel protractor, Coordinate measuring machine (CMM): Construction, principle graduation and reading, least count.

UNIT III

Introduction to CNC:

Introduction to CNC technology, Conventional Vs. CNC machine tool, CNC clamping system. Implementation of JH for CNC.

UNIT IV

CNC programming:

Introduction to CNC programming, Introduction and demonstration of line programs milling machine using ISO codes into the CNC simulator. Part programming methods, Cutting process parameter selection, Process planning issues and path planning, G & M Codes, Interpolations, Tool compensations.

UNIT V

CNC Programming-Milling:

Calculations of parameters like speed feed, depth of cut etc. and set a references for the various operations. Prepare & set CNC Milling operations and dry run on the machine. Execute program and inspect simple geometrical forms / standard parts.

Course Outcomes:

Upon completion of this course, the students will be able to:

Understand the usage of different tools and precautions to be followed during machining.

CO1: Know the principle and operation of precision instruments.

CO2: Understand the technological advancements in NC and aimed to achieve JH pillar.

CO3: Understanding the programming methods and programming in simulators

CO4: Planning for optimized CNC programming by estimating suitable process parameters

CO5: Programming of die contours and executing on CNC milling machine.

Reference Books:

1. Computer Control of Manufacturing Systems, Mc Graw Hill Publication, By Yoram Koren.
2. CAD/CAM By Mikell P. Groover

4. Engineering Metrology, Khanna Publishers, By R K Jain

Course Title	Concept Car Manufacturing
Course Code	ME28015 (L-T-P-Cr: 0-0-2-2)

Course Contents:**UNIT I****Car Development:**

Constraints And Specifications – Performance, Handling, Structure; Driver Accommodation and Safety

Tyres: Adjustable Features, Preliminary Design And Analysis; Driver-Vehicle Relationship. Desirable Vehicle Characteristics, Fundamentals of Track and Lap

UNIT II**Racing Car Aerodynamics:**

Aerodynamic Force and Moment, Race Car Drag; Spoilers, Dams, Wings - Effectiveness Of Wings In SteadyState Cornering

UNIT III**Chassis Design:**

Conditions For Traversing a 90° Corner, Effects Of High Speed Braking, Cornering, Combined Braking Cornering; Steady State Cornering, Throttle Behaviour, Steering Wheel Force And Kick Back; Moving CG Position, Roll Centre Position Changing

UNIT IV**Suspension System:**

Front Suspension- General Design Issues, Camber Effects; SLA Suspension, McPherson Struts; Independent Rear Suspension- Trailing Arm Types, Instant Axis Concept; Suspension Springs- Torsion Springs, Coil Springs.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1. Remember the fundamentals of concept car characteristics.
- CO2. Understand the aerodynamic requirements in racing vehicles.
- CO3. Use the concepts of chassis behaviour of concept car

- CO4. Illustrate the suspension characteristics of the concept car.
 CO5. Understand the problems faced in drives and braking systems in motorsports.
 CO6. Build a concept car body

Textbooks:

1. Advanced Race Car Chassis Technology HP1562: Winning Chassis Design and Setup for Circle Track and Road Race Cars Bob Bolles, HP Books; Revised, Updated ed. edition 2010

Reference Books:

1. Race car vehicle dynamics, William F. Milliken and Douglas L. Milliken, 11th edition, SAE, 1995.
2. Formula 1Technology, Peter Wright, Sae Intl; 1st edition 2001.

Course Title	Development of Autonomous Wheeled Robots
Course Code	ME28017 (L-T-P-Cr: 0-0-2-2)

Course Objective:

Nowadays, robotics is playing a vital role in industry 4.0, and autonomous wheeled robots are being applied to minimize human efforts and to improve the production rate. This course gives fundamental knowledge about wheeled robotics and its different hardware and software components. Moreover, the subject discusses kinematics equations, which will be implemented to control the motion of wheeled robots through the actuators. Further, the present course also describes the integration of various sensors and their programming, which will be used to make an autonomous control system for a robot.

Course Contents:

UNIT I

About Locomotion for Wheeled Robot:

Key issues for locomotion, wheeled mobile robot’s locomotion, Legged wheeled robots.

UNIT II

Wheeled Robots Kinematics:

Kinematic models and constraints, Representing robot position, Forward kinematic models, Wheel kinematic constraints, Degree of freedom.

UNIT III

Sensors for Autonomous Wheeled Robots:

Various sensors for wheeled robots, Sensor classification, Ultrasonic sensor, Infrared sensor, Vision sensor, Inertial measurement unit (IMU).

UNIT IV

Actuators for Autonomous Wheeled Robots:

Various actuators for wheeled robots, DC motor, Servo motor, Stepper motor, Motor controller.

UNIT V

Wheeled Robots Programming:

Robot programming language features, Computer control and robot software (monitor mode, run mode and editor mode), Arduino microcontroller programming, Raspberry Pi programming, Complete design of an autonomous wheeled robot.

Course Outcomes: Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1: Understand the fundamentals of wheeled robotics and its different components.
- CO2: Apply locomotion constraint features to travel the wheeled robots in different surface conditions.
- CO3: Apply various sensors integration on wheeled robots for autonomous navigation.
- CO4: Analyze the kinematics of wheeled robots.
- CO5: Create a robot programming to make an autonomous sensor-actuator control system.
- CO6: Design of automation solutions using wheeled robots.

Course Title	Modeling of Micro-Wind turbine by 3D CAD Design
Course Code	ME28019 (L-T-P-Cr: 0-0-2-2)

Course Objective:

Introduce computer-based solid, parametric, and assembly modeling as a tool for engineering design; enhance critical thinking and design skills. This course

introduces the technology and economics of converting wind energy to electricity and other kinds of energy. Both utility scale horizontal axis wind turbines and small-scale horizontal are addressed, as well as the economical and environmental issues associated with wind energy.

Course Contents:

UNIT I

Introduction to Wind Energy, Wind Power, State of the art technology:

Introduction to renewable sources, Wind energy, Types of wind turbines, State of the art technology in wind energy.

UNIT II

Design and development of small wind turbines:

Small wind technology, blade element momentum theory, design of tail fin, Wind turbine tower structure design stiffness and strength consideration, Aerodynamics of wind turbine rotor blade design, angle of attack, profile.

UNIT III

3D modelling of wind turbine using CAD tools (SOLIDWORKS):

Introduction to 3D modeling, Parametric modeling, feature-based modeling, Design Intent; Solid modeling commands: Sketching, Extrusion, Revolve, fillet, pattern.; Solid Modeling: reference geometry, Sweeps and Lofts;

UNIT IV

Assembling of the 3D model of the Wind turbine:

Assembly modeling; Top-down and bottom-up, Mates in assembly, exploded view,

UNIT V

Creation of 2D drawings for production/manufacturing processes.

Extract 2D orthographic views from the 3D model for fabrication by specifying the proper dimensions, according to industry standards, for parts to be fabricated and to extract section and auxiliary views, Dimensioning standards and conventions. 3D assembly drawing of the wind turbine, exploded view of the tower, 3D drawings of all 3D printed parts.

UNIT VI

Simulation of wind turbine using SOLIDWORKS using CAD tools (SOLIDWORKS and ANSYS):

Engineering analysis with SolidWorks, Stress and deflection of the wind turbine tower, Simulation of wind turbine using SolidWorks

Course Outcomes:

Upon completion of this course, the students will be able to:

CO1: To learn about the basic concepts of wind energy conversion system.

CO2: To understand the engineering design process and the implementation of different design phases.

CO3: To create a 3D solid model with high degree of confidence.

CO4: To develop the ability to extract 2D orthographic views from the 3D model for fabrication.

CO5: To learn the basics of assembly and associative constraints.

CO6: To understand the importance of standalone, grid-connected, and hybrid operation in renewable energy systems.

K-Xplore

(Practice Oriented Open Elective – I)

The B. Tech. curriculum provides for a 1-Credit practice-oriented Open Elective K-Xplore in Semester V to make our undergraduate engineering programme holistic, multidisciplinary, skill-based, and balanced. This course allows the students to explore the opportunity that the KIIT University offers to them to sharpen their skills in areas which excite them the most.

Offered in a self-learning mode, this subject allows the students to hone their skills in areas they are passionate about which they select from a wide spectrum of subjects in art, literature, technology, community engagement and service, health, and environment and sustainability. In addition, the students develop soft skills that are important for them in their professional life. This course, thus, allows students to explore and grow in areas outside of core academics and provides a channel for complementing the lessons learned in the classroom, offering them the opportunity to apply academic skills in a real-world context and providing a truly well-rounded education.

This course is designed on the basis of the guiding philosophy of student-centered learning where the students define problems, evaluate alternatives, design solutions, and self-learn by performing certain assigned activities with limited guidance from faculty facilitators.

Each student selects an area of his (or her) choice from a specified list of areas. All the students with choice in a particular area are assigned to one or more faculty facilitators. Faculty facilitators assign the activities and tasks necessary for the course to the students and decide the desired mode of skills training.

They may decide to make small groups of students of varying group sizes to carry out the assigned activities and tasks. They also make the required facilities available to the students to enable them to carry out the assigned activities and tasks.

The timetable will earmark specific hours for the subject. But the students are expected to use their spare time (including holidays and after-lecture hours on working days) to learn the required skills and use these skills to accomplish the assigned activities and tasks. The students, however, have to meet the faculty supervisors on the specified hours every week to appraise them of their progress, clear their doubts, if any, and chart their future plan.

The Head of KIIT Student Activity Centre (KSAC) will coordinate offering of the course.

Course Outcomes:

Upon completion of this course, the students will be able to:

- CO1 :Develop the needed technical skills in their chosen fields of interest,
- CO2 :Develop higher levels of self-confidence and soft skills such as communication, writing, discussion and debate, time-management, and leadership skills
- CO3 : Apply the learned skills to give shape to their passionate ideas,
- CO4 : Develop Innovation and entrepreneurial mindset,
- CO5 : Analyze and judge a problem situation for deploying the learnt knowledge and skills and develop problem solving strategies, and
- CO6 : Build new products and services using the learned knowledge and skills.

Course Title	Robotic
Course Code	SA38001 (L-T-P-Cr: 0-0-2-1)

Course Objective

To assist students develop the knowledge of robotics and circuitry, build circuits, bots and robots, and participate in different Robotics events such as Robo Wars.

Course Title	Web Designing
Course Code	SA38003 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To help a student learn and develop front-end and back-end web development skills and create websites.

Course Title	Civil-Tech
Course Code	SA38005 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To make a student ready to plan and design selected aspects of real life construction projects with relation to environment, transport & connectivity, water resource engineering & soil exploration and gain pre-, present-, and post-construction experience.

Course Title	Circuit Design & Control
Course Code	SA38007 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To let the students learn the required skills to design and develop electrical circuits and implement controllers for use in robotics, automation, voice recognition, gesture recognition, etc.

Course Title	Indian Classical, Folk & Bollywood Dance
Course Code	SA38009 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To encourage and boost the confidence of the students to choreograph and perform in classical, semi classical / folk and bollywood dance forms.

Course Title	Indian Classical & Western Music
Course Code	SA38011 (L-T-P-Cr: 0-0-2-1)

Course Objective

To give confidence to the students to participate and perform as a vocalist and/or instrumentalist in different forms of Indian classical and western music.

Course Title	Graphic Designing & Editing
Course Code	SA38013 (L-T-P-Cr: 0-0-2-1)

Course Objective

To nurture the students' skills in creative designing, photo and video editing activities, and digital sketching and painting, using Designing & Editing software such as Photoshop, Illustrator and video editing software.

Course Title	Art & Craft
Course Code	SA38015 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To endow the students with the skills to do various types of painting such as portrait painting, landscape painting, abstract painting, pencil sketching, and doodling and craft, using various Painting and Sketching tools.

Course Title	Theatre & Street Pla
Course Code	SA38017 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To give students the confidence to perform in Theatres, Nukkad, Mono Acts and skits based on written scripts.

Course Title	Film Making
Course Code	SA38019 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To impart skills for film making in areas such as cinematography, script writing, audio recording, and editing.

Course Title	Debating, Public Speaking & Anchoring
Course Code	SA38021 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To develop the students' skills for performing oratory activities such as extempore speech, debate, poetry reading, open topic speech, public speaking, interviewing, open dialogue, anchoring, and presentation.

Course Title	Creative Writing
Course Code	SA38023 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To develop the students' skills in creative writing, content writing, article writing, and poem composition.

Course Title	Photography & Videography
Course Code	SA38025 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To provide the technical knowledge required to create photos and videos that tell a story or capture a real-world occurrence.

Course Title	Fashion Styling
Course Code	SA38027 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To impart the basic skills of costume design, styling, grooming, and presentation relevant to a specified theme.

Course Title	Culinary Arts
Course Code	SA38029 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To help the students learn the skills of cooking, knowing ingredients, and preparing cuisines of Pan India and 65 countries

Course Title	Quiz Activity
Course Code	SA38031 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To give the students the confidence to participate in, and conduct, various forms of quiz, such as Technical Quiz and Business Quiz.

Course Title	Social Outreach
Course Code	SA38033 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To sensitize the students on the social issues and giving them an opportunity to connect with the community and the environment through outreach activities, community projects, and volunteering.

Course Title	Health & Emergency Care
Course Code	SA38035 (L-T-P-Cr: 0-0-2-1)

Course Objective:

To let the students learn about health issues, basic Life-saving skills and participate in health awareness and sensitization programs.
